# COINS OF THE INDO-SCYTHIANS.

PART I.

BY

Major-General SIR A. CUNNINGHAM, R.E., K.C.I.E., C.S.I.

REPRINTED FROM THE NUMISMATIC CHRONICLE, Vol. VIII., THIRD SERIES, PAGES 199-248.

LONDON:

1888.

#### COINS OF THE INDO-SCYTHIANS.

#### PREFACE.

On three sides India is protected from invasion; by the Himâla Mountains on the north, and on the east and west by the sea. But on the north-west side, along the line of the Indus, she is open to attack. On this side she was successfully invaded in ancient times by the Persians, the Greeks, and the Indo-Scythians. On this side also, in modern times, she was successfully assailed by the Turks under Mahmud Ghaznavi and Muhammad Ghori, and by the Mongols under Baber.

The Persian rule in N. W. India lasted for about two centuries, from B.C. 500 to 330, from the time of Darius to the invasion of Alexander the Great. The Greek dominion lasted for about three centuries, from B.C. 330 to 26, when the Kabul valley and the Panjûb were conquered by Kujula, king of the Kushân Scythians. The flourishing period of Indo-Scythian rule also lasted for about three centuries, or from B.C. 26 down to the end of the third century A.D., when it came into contact with the rapidly growing power of the Gupta dynasty of N. India.

<sup>&</sup>lt;sup>1</sup> Pauthier, Le Thian-tchu, on l'Inde, p. 9 note, quoting Ma-twan-lin.

The rise of this great dynasty deprived the Indo-Scythians of N. W. India; but they still retained possession of the Kabul valley and the Panjab in the north and of Sindh in the south. In the latter country they remained until the seventh century, when they were dispossessed by the Brahman Chach. In the former they remained until the end of the ninth century, when they were displaced by the Brahman Kalar.

The three centuries of Indo-Scythian rule in N. India form a very striking period, as it separates Sanskrit literature into two broadly marked divisions, named by Dr. Max Müller the ancient and the modern, the former comprising the Brahmanical Veda and the Buddhist Tripitaka, and the latter all other works,<sup>2</sup> including even the Râmâyana and Mahâbhârata, which in their present form are probably not older than the period of Gupta rule.

In the present account I propose to treat at some length of the three centuries of the more flourishing period of Indo-Scythian rule previous to the rise of the Gupta empire. For this period we possess not only a profusion of coins but also a considerable number of inscriptions. For the later period of almost four centuries, from about A.D. 300 down to the advent of the Muhammadans, the materials are comparatively scanty. The coins indeed are numerous, but they are unfortunately of uncertain dates, and their inscriptions, even when expressed in Indian characters, are either limited to single letters or to general titles which give but little useful information. The long legends on most of the silver coins of this period are at present quite useless, as they are expressed in an

<sup>&</sup>lt;sup>2</sup> India-What can it teach us? p. 88.

unknown Scythian character, and no doubt also in some Scythian language. According to the Chinese pilgrim, Hwen Thsang, the characters in use to the north of the Indian Caucasus in A.D. 630 were 25 in number, and were written from left to right. Not a single name is known, and as all the characters on the coins are joined together, it is difficult to find out where any particular letter begins or ends. I think that I have discovered the combination that corresponds with the title of Shāhi, and as this was the native title the characters should correspond.

In the following account I have aimed at giving a description of all the known coins of the Indo-Scythians. together with such historical notices as I have been able to gather from various sources. I have divided the work into three parts, as follows:—

Part I.—Historical notices of the Indo-Scythians.

Part II.—Notes on the coins of the Indo-Scythians.

Part III .-- Descriptive lists of the coins.

There are three minor subjects, which, as they are brief, may be conveniently discussed at once. These are—

- 1.—The Arian legends on the coins.
- 2.—The monograms on the coins of the Saka kings.
- 3.—The monetary systems.

#### 1.-THE ARIAN ALPHABET.

When Wilson published his Ariana Antiqua in 1840, no progress whatever had been made in reading the native legends beyond the point where James Prinsep had left it. The native forms of several important names still remained unread, such as Gondophares and Abdagases, and the legend on the reverse of Queen Agathokleia's

coin. I was the first to discover the true form of the letter G on the coins of Gondophares and Abdagases in 1841, which I followed up by applying it to the word Strategasa, Στρατηγός, on the coins of Aspa Varma, the sou of Indra Varma. The discovery of GH followed immediately afterwards, as this letter is formed by the simple addition of H to G. At the same time I discovered the form of BH in bhrata-putrasa, or "brother's son," as the translation of ΑΔΕΛΦΙΔΕΩΣ on the coin of Abdagases, and in bhratasa, or "brother," as the translation of ΑΔΕΛΦΟΥ on the coins of Vonones and Spalahores. This was followed up by reading the name of Amoghabhati on the coins of the King of the Kunindas.

The compound character answering to STR I found on the coins of *Hippostratus*, which led to the discovery that the native legend of the coins of Agathoklein gave the name of King *Straton*.

In the proceedings of the Bengal Asiatic Society for April (just received) I find that Dr. Hoernle objects to the readings of Stratasa and Hipastratasa, on the ground that the st of Sanskrit becomes th in Pali. This is true for Eastern India, but not for Western India and the Panjab and Kabul, where we know that the people preserved the pronunciation of st in the names of the Princes Haustanes and Astes. But the most direct and satisfactory proof is afforded by he different versions of Asoka's inscription. On comparing the Girnar version, which is recorded in Indian Pali characters, I find nasti in Edicts II. and VI. as in the Shahbazgarhi text, while the Kalsi, Dhauli, and Jaugada versions have nathi. I find also asti and vista in Edict XIV. of Girnar and Shahbazgarhi where Kalsi and Dhauli have athi and vitha.

For Western India I may refer to the inscription of

Chashtan, the Tiastanes of Ptolemy, as the most convincing proof that the compound st was not pronounced as th in Ujain and Surâshtra.

In India also we know that aswa, a horse, was shortened to assa and asa in Pali. But in the west we find Tushaspa, the Yavana satrap of Surashtra under Asoka; and to the west of the Indus we have Khoaspes. It will be sufficient, however, to note that the Arian compound letter read as sp, is the equivalent of the Greek  $\Sigma\Pi$  in the names of Spalahora and Spalgadama.

I was the first to read the name of Kushan on the coin of Kozoulo Kadphises, and that of Khushan on the coins of Kozola Kadaphes, and to identify both with the Greek KOPANO and XOPAN. After this followed the name of Kanishka in Court's Manikyala inscription as king of the Gushans.

Two forms of PH were obtained from the coins of Telephus and Gondophares.

CH and CHH I discovered about the same time, by identifying *Chhatrapa* as the true reading of *Kshatrapa*, or Satrap.

SW I found in Mahiswara and Sarva-lokeswara on the coins of Hima Kadphises.

The prefixed R was another valuable discovery, as it led to the correct reading of RM in *dharma*, as well as in Aspa Varma and Indra Varma. Then followed Sarra and acharya, to which I can now add Gondopharna.

But my chief discovery in the reading of names in the native characters was the decipherment of the names of the Macedonian months Arthamisiyasa, Panemasa, and Apilaesa in three different inscriptions.

In the Indian Pali alphabet I claim the discovery of the title of Rajine on the coins of Pantaleon and Agathokles,

which had baffled every previous writer. Rajine is the Pali form of the Sanskrit genitive Rajnya, "of the king." The middle letter j had heen read by Lassen; but the undulating form of the initial r had puzzled him.

I also discovered the true reading of the title of **ZAOOY**, or zavou, which had always been read previously as **ZAOOY**, or zathou. It is the Greek rendering of the native title which the Chinese have preserved as Sha-wu (Cha-wou).

I may add also that the true reading of the name of BAZO-ΔHO or Vasu Deva, was due to me. On the small copper coins the name is shortened to BAZ-ΔHO, which is the true spoken form of Bås-deo.

It is perhaps curious to note, that though all these readings have now been generally adopted, scarcely one of them has been acknowledged as mine.

The accompanying Plate VII. gives the native names and titles of all the Indo-Scythian kings in the Arian Pali characters, as found upon their coins. The transliterations of all the legends are given in Plate VIII.

#### 2.-Monograms.3

The Greek monograms on the coins of the Indo-Scythians are comparatively few, there being only about fifty on the coins of the Saka kings, but not even one on those of the Kushan kings. I am fully aware of the difficulty of any attempt to explain these monograms; but as they occupy a very prominent place on the faces of the coins, I do not think it right to leave them unnoticed. My previous attempt to explain the monograms on the coins of the Greek princes of Bactria and India was con-

<sup>&</sup>lt;sup>3</sup> For illustrations of monograms see Plate IX.

fessedly tentative. But I still feel that I was right in my original opinion, that the occurrence of the same monograms on the coins of many consecutive princes of different dates is sufficient evidence to show that they cannot be the names either of magistrates or of mintmasters, and must therefore almost certainly be the names of cities where the coins were struck.

It has been objected by M. Chabouillet that my early attempt to explain these monograms does not give the name of any one of the seventeen towns of Bactria recorded by Ptolemy. To this I can reply that only six of the thirty known Greek princes of the East were kings of Bactria, and that the number of monograms on their coins can be counted on the fingers. As all the other monograms are found upon coins bearing native legends, they must certainly be referred to the south of the I may note, however, that the letter N. which Caucasus. is found singly on the coins of Antiochus I., Antiochus II., Diodotus, and Antimachus I., perhaps denotes Nautaka, where Alexander wintered, as I find a monogram forming NA on the tetradrachm of Antimachus with the head of Diodotus on the obverse.

Mr. Percy Gardner accepts M. Chabouillet's opinion, and adds that I profess to have found in the monograms "the names of most of the cities of Bactria and the Panjâb." Mr. Gardner has evidently overlooked my actual profession on this point, in which I distinctly state that "I do not suppose that all, or even one half, of the names that occur on the coins of the Bactrian and Arian Greek, are the names of mint cities."

Mr. Gardner then proceeds to state his "entire agreement with M. Chabouillet," that there are but few cities, such as "Odessus, Patræ, and Panormus, which are known

to have placed on their coins a monogram to represent their names."

To this argument I reply that as the coins of cities usually give their names at full length, their repetition in the form of monograms was quite unnecessary. There are, however, many examples of the names of cities expressed by monograms, but only on those coins where the name itself is not given. I may quote the following:—

- Monogram forming AK on coins of Akarnania. (Head, Hist. Num., p. 283.)
- Monogram forming ANA on coins of Anaktorium. (Head, Hist. Num., p. 279.)
- Monogram forming APKA on coins of Arkadia. (Head, B. M. Guide, pl. 23, 37.)
- 4. Monogram forming AEONTIN on coins of Leontini. (B. M. Cat. Sicily, p. 94.)
- Monogram forming KPA on coins of Kranii. (B. M. Cat. Pelop., p. 80.)
- Monogram forming KOP on coins of Korkyra. (B. M. Cat. Coreyra, p. 128.)
- Monogram forming EP on coins of Hermione. (B. M. Cat. Pelop., p. 160.)
- Monogram forming ΣA on coins of Samé. (B. M. Cat. Pelop., p. 91.)
- Monogram forming FA on coins of Gaza. (Head, Hist. Num., p. 680.)
- Monogram forming \$\Pi\to\text{O}\$ on coins of Ptolemaïs. (B. M. Cat. Ptolemies, p. lxxxvi.)
- Monogram forming AXAI on coins of Achaia. (B. M. Cat. Petop., p. 1.)
- Monogram forming KAH on coins of Kleitor. (B. M. Cat. Pelop., p. 180.)
- Monogram forming MAT on coins of Mateolum. (B. M. Cat. Italy, p. 141.)

Monograms for the names of kings are not unknown, as-

AHMHTP for Demetrius of Macedon. (Head, Hist. Num., p. 204.)

NIK for Nikokreon of Cyprus. (Head, Hist. Num., p. 626.)

TYP for Pyrrhus. (Head, Hist. Num., p. 208.)

ANTI for Antigonus of Macedon. (Head, Hist. Num., p. 204.)
MOAF for Moagetes of Kibyra. (Zeit. f. Num., I. p. 880.)

Again Mr. Gardner states his opinion that M. Chabouillet is clearly right in saying that these monograms are usually merely "the private mark of a magistrate or a contractor." That this may have been the case with many of the cities of the West I freely admit, but we are now dealing with the kings of the East, and not with the cities of the East. In the East, the right of coinage has always been a royal prerogative, which from the time of Darius Hystaspes has been jealously guarded, and its infringement severely punished. The story of Aryandes as told by Herodotus is familiar to every one.

But both M. Chabouillet and Mr. Gardner have evidently overlooked the case of the well-known coins, called Cistophori, on several of which the names of the cities where the coins were minted are certainly given in monogram, while the names of the magistrates are usually confined to the two initial letters.

- On cistophori of Adramyteum, monogram forming AΔPA. (Head, Hist. Num., p. 446.)
- 2. On cistophori of Parium or Apameia, monogram forming **□A**. (Head, Hist. Num., p. 459.)
- 8. On cistophori of Pergamus, monogram forming TEP. (Head, Hist. Num., p. 462.)

Might not the same system have prevailed in other

countries besides Asia Minor? For instance, on a large copper coin of Alexander, I find the monogram which I have read as Demetrias coupled with another forming TH, and on another copper coin the same Demetrias monogram with the letter  $\Delta$ . If one of these must be the mintmaster's name it certainly cannot be the first, as that monogram is found on the coins of no less than twelve different princes from the time of Demetrius down to Hermæus, or for upwards of a century and a half. Similarly I find a common monogram of the coins of Hippostratus repeated on the coins of Azas. It forms the syllable APT, which I take to be the name of the mint city. On the coins of Hippostratus it stands alone, but on those of Azas it is variously accompanied, sometimes by  $\Delta i$  in monogram, sometimes by MIP in monogram. As it is scarcely possible that these two kings could have had the same mintmaster, I incline to the opinion that the monogram is more likely to be the name of a town than that of a man.

On the coins of the neighbouring kingdom of Parthia we have the names of at least three cities given at full length: Katastrateia, Traxiane, and Margiane. The last Mr. Gardner takes for the name of the province of Margiana; but surely it must be intended for the ancient city of Merv, which was rebuilt by Antiochus as Antiocheia Margiane. The names of at least three other Parthian cities are given in an abbreviated form, and not in monogram. A single monogram accompanied by the word NOAIX undoubtedly refers to a city; and this example serves to strengthen the opinion that several of the other monograms found on Parthian coins may be the names of cities. Some of these monograms form combinations so simple as scarcely to admit of any other readings. Amongst these I find PA for Rhaye, APTA for Artamita.

XAPA for Kharax, ANA for Apamea, ANT for Antiochia, HP and HPAK for Heraklea,  $\Phi Y \Lambda$  for Phulake,  $\Gamma A$  for Gaza, and ANOAA for Apollonia.

The question now arises, From whence did the Parthians derive this practice of putting the names of cities on their coins? As the kings of Syria did not as a rule do so, the Parthians themselves must either have originated the practice or they must have copied it from the Bactrian Greeks. But as I have noticed a prevailing desire to trace all the coin types of the Parthians to Syrian or Bactrian types, I presume that the Parthian origin of the custom will be disputed. In any case the custom must have been familiar to the Eastern Greeks. The name of one city I have found beyond all doubt on some coins of Eukratides, namely Karisiye-nagara, that is the city (nagara) of Karisi. This city I take to be the same as Kalsi or Karisi of the Buddhist chronicles, which was the birthplace of Menander.

The practice of the Arsakidan kings was followed by the Sassanians; and on the coins of Feroz are found the names of no less than twenty-six different mint cities, accompanied by the years of the reign.

So also did the Khalifs of Baghdad give the names of their mint-cities with the Hijra dates on all their coins. Their example was followed by the Turki Sultans of Ghazni, and afterwards by the Turk and Mughal Emperors of India down to our own times.

To prevent misapprehension I may here state my views as to the information to be derived from the monograms. Such of the combinations as are simple and easily resolvable into well-known names, either in full or in part, may I think be accepted as actual names. But unless the places fulfil the condition of being within the territory

held by the particular prince on whose coins they occur, they cannot be accepted. As an example of my method I will take the monogram forming EY, which is found on the coins of Euthydemus, Eukratides, Menander, Straton, Zöilus, Apollophanes, and Rajubul. I take this monogram to stand for Euthydemia or Sangala, a well-known city in the Panjåb, which most probably received its name from Demetrius, the son of Euthydemus, during his Eastern campaigns. That the place was certainly in the Eastern Panjåb is declared by its occurrence on the ruder coins of Straton, Zöilus, and Apollophanes, which are restricted to that district. Lastly, the monogram is common on the copper coins of Menander, who, in the Pali work named the "Questions of Milindra" is distinctly said to be the King of Såkala.

As another example I will take the common monogram, No. 15, of the coins of the Vonones family, which I read as KOTTOBAPA in full. The princes of this family held Arachosia, of which the capital in the time of Isidorus was Sigal. As the letter g is very commonly elided, I think that Sigal may be read as Sial or Shal, a large town close to Quetta. As the last name is a peculiarly British rendering of Kotta, or "the forts," I think that Ptolemy's Kottobara must be simply Kotta or Quetta, with the town of Shal close by to represent Sigal. I would remark that the same reasons which have led to the British occupation of this position must have had equal weight with the Saka Indo-Scythians when they made it their capital.

The monogram of FAZAKA, for Ghazni, No. 14, also seems unobjectionable.

Another example which I consider as almost certain is No. 3 and No. 37 monograms, which I read as

KAZNANYPA in full. This was the ancient well-known name of Multân, and it was from Multân, and not from Kashmir, that Skylax must have started. There are two objections fatal to Kashmir: 1, the city was not named Kasyapapur; and 2, no boat could descend the Jhelam or Hydaspes below Barahmula.

In the Plate of Monograms (IX.) I have included all that I could find on the coins of Moas and of the Vonones family. But I have been obliged to be content with a selection of the very numerous monograms on the coins of Azas and Azilises. Some day, perhaps, a key may be found to unlock the mystery which lies hidden in these little knots of letters.

When I made an attempt nearly twenty years ago to unravel some of the monograms on the Greek coins of Bactria and India, I stated my opinion that all the coin monograms "which are common to a number of different princes can only be the names of cities, and cannot possibly be the names either of magistrates or of mint-masters, or of any other functionaries." Some of the numismatists of Europe, as I have already noted, seem to think that because magistrates' names are found on the coins of Greek cities, the same custom must have prevailed in the East with the coins of kings.

One example of the name of a city I can now offer which I think is not open to objection. I allude to the name of Sangala, the Shâkala or Sâkala of the Hindus. According to Ptolemy this place was also called Euthydemia (corrected from Euthymedia). At the top of the Plate I have given several different monograms of this

<sup>4</sup> Num. Chron., IL Ser., viii. p. 185.

place, which seem to me to be quite satisfactory. I have marked them A, B, C, D. A is found on the coins of Euthydemus and Menander. It forms EY, which I refer to Euthydemia, as we might naturally expect to find it on the coins of Euthydemus, after whom Sangala must have received its Greek name of Euthydemia. We might also expect to find the same monogram on the coins of Menander, as in the Milinda Prasna Sågal is said to have been the capital of Raja Milindra. Sangala was in the Eastern Panjab; and we learn from Strabo that Menander had actually crossed the Hypanis or Bias river.

B is also found on the coins of Euthydemus. It forms simply EY for Euthydemia.

C consists of two monograms which are found together on a coin of Eukratides. The upper one reads EY, as before, but the lower one gives the alternative name of EAFFAAA in full.

D is found on the coins of no less than four kings—Straton, Zoïlus, Apollophanes, and Rajubul. It forms EY. As the coins of all the four princes on which this monogram occurs are of coarser and ruder work, and are found only in the Eastern Panjâb, I think we may admit that they were most probably struck at Euthydemia or Sangala, which was certainly the capital of that part of the country.

Of the monograms given in the Plate, Nos. 1 to 11 are found on the coins of Moa or Mauas; Nos. 12 to 19 are found on the coins of the Vonones dynasty; Nos. 21 to 49 on the coins of Azas and Azilises; and Nos. 50 to 52 on the coins of the Gondophares dynasty. No. 55 occurs on the base silver coins of Rajubul.

#### Monograms of Moas or Mauas.

The coins of Moas are found chiefly in the Northern Panjab and as far south as Multan; but so far as I am aware none have yet been found either in Sindh or in the Kabul valley to the west of Peshawur. If any of these monograms represent the names of mint cities, I would suggest that No. 2, which forms NIK, may be Nikaia, the city which was built by Alexander on the site of his battle with Porus. In my "Ancient Geography of India" I have shown some good reasons for fixing the site of Nikaia at Mong, which is said to have derived its name from Ruja Moga.

No. 3 I would read as KAXNANYPA, which was the old name of Multan, and which I would therefore identify with the city of Kaspapuros, recorded by Hekatæus and Herodotus. If the monogram is intended for the name of a city, I think that my reading has a fair claim to be accepted. I am aware that the closet geographers of Europe have generally taken Kaspapuros for Kashmir. But I have marched along the bank of the Hydaspes after it leaves the valley as far as Muzafarabad, and I can safely assert that no boat could stem the rapids below Barahmula.

The remaining monograms of Moas I must leave unattempted. I confess, however, to a feeling of disappointment at not finding any knot of letters that might be united to form the name of Taxila.

#### Monograms of the Vonones Dynasty.

The coins of this family were found in Kandahar by Stacy and Hutton in 1840-41, and by Ventura and myself in the Western Panjab. As only five specimens were got by Masson at Begrâm in a three years' collection, I conclude that these princes must have ruled over Arakhosia from Kandahar to the Indus. The metropolis of this tract of country according to Isidorus was Sigal, which by elision of the letter g I would identify with Shâl, a large town close to Quetta. The proper name of Quetta is Kotta, which may be identified with Ptolemy's Kottobara. If any of the monograms on the coins of the Vonones family represent the names of cities, I should expect to find both Sigal and Kottobara tied up in some of these letter-knots. Nos. 12 to 19 are Vonones monograms.

No. 16 forms ΣΙΓΑΛ in full, but as it may be read in other ways I only propose Sigal on account of the probability of its being represented on the coins.

No. 15 I read as KOTTOBAPA in full, and as this monogram cannot well be read in any other way, I think that there is a strong presumption in favour of its accuracy. I do not deny the possibility that Kottobaros might have been the name of some subordinate officer of the Vonones dynasty, and that his son might have borne the same name and have held the same office under successive rulers. But all these possibilities scarcely amount to a probability, and I must confess that I prefer the city Kottobara.

No. 17 offers simply KOTTO, which I take for Kotta or Quetta, without any addition.

No. 14 I read as FAZAKA, or Ghassi, with some confidence, as I do not see that it can be read in any other way.

No. 13 may be read as ΠΑΡΔΑΒΑΘΡΑ, a city placed by Ptolemy on the western bank of the Indus. I presume that this must be the same place as the *Barda* of Isidorus; but I am unable to identify it. Perhaps No. 12, which seems to be simply B, may be intended for Barda.

Another town mentioned by Isidorus is Min, which has been identified with Ptolemy's Binagara on the Indus.

#### Monograms of the Asas Dynasty.

The monograms of Azas and his successor Azilises are very numerous; and in the present Plate I have given a selection of those which are found on the principal coins, ranging from No. 21 to No. 49. As the successors of Moas they must have ruled over the Northern Panjâb, from Taxila to Multân.

No. 25 monogram may be read as ΣΑΓΓΑΛΑ, a place which was certainly within the dominions of Azas.

No. 37 is similar to No. 3 of Moas, which I have already explained as making KAXNANYPA in full, for the ancient city of Multan.

No. 40 may be read as FIANTAFPAMMA, a town placed by Ptolemy on the Indus. It has been identified by Mr. McCrindle in his Indian Geography of Ptolemy, with Panjpur, near Embolima, because, as he says, it "agrees closely, both in its position and the signification of its name, with the Pentagramma of Ptolemy." But the true name of the place here referred to is Panj-pir, or the "Five Saints" of the Muhammadans; whereas the Hindus call it Panch-bir, or the "Five Heroes," and refer the name to the five Pandu brothers. This monogram might form BATANAFAPA, a name preserved by Ptolemy in the Eastern Panjâb. I would identify it with Pathániya, or Pathánkot, one of the oldest places in the country. Its original name was Pratisthána, which was shortened to Paithâna, or Paithân. It was the capital of

the Odumbaris, of whom I possess coins as old as the time of Apollodotus.

No. 41 forms BAPAA, which I suppose to be the same place as Ptolemy's Pardabathra on the Indus. As Azas seems to have outlived the last of the Vonones dynasty, he may have succeeded to some of the eastern portions of their dominions; or he may have held Barda during the lifetime of his contemporary Spalirises, as their names appear together on several of the coins.

#### Monograms of the Gondophares Dynasty.

The principal monogram of this family is No. 51, which forms the name of FONAOPAPA in full. I have no reason for supposing that he actually founded any city, but I note the fact of this possible reading as being curious, if not important.

#### Monogram of Rajubul.

No. 55 monogram is found on the base silver coins of Rajubul, which have been found in the Eastern Ponjab as well as at Mathura. His copper coins, with Arian legends, are found only in the Eastern Panjab. I have therefore no hesitation in placing him at Sangala, as the monogram EY almost certainly refers to the city of Euthydemia, which was the Greek name of Sangala.

#### 3. MONETARY STANDARD.

Two very marked and sudden changes took place in the weights of the gold and silver coins of N. W. India during the rule of the Greeks and Indo-Scythians. The first change took place in the weights of the Greek silver coins after the time of Eukratides. From the existing gold and silver coins of Diodotus and Euthydemus, we see that the Attic standard of weight had been preserved with a rate of 10 silver to 1 gold. The gold stater at its full weight was 134.4 grains, which at 10 rates gave the equivalent silver value at 1,344 grains. This divided by 20 gave the weight of the silver drachma as 67.2, that of the didrachma 134.4, and that of the hemidruchma as 336 grains. Suddenly we find that the silver coins of the sixteen kings who followed Eukratides have become heavier, the average weight of 16 didrachmas having become 1463 grains, while that of 82 hemidrachmas had risen to 36.48 grains. As many of the latter are over 37 grains, I take this to be the full weight of the hemidrachma, while that of the didrachma must have been up to 148 grains. Now this change must represent either a rise in the value of gold or a fall in that of silver, by which the relative values of the two metals had become 11 S. = 1 G., that is, one-tenth had been added to the weight of the silver coins. Thus:-

Grains.

134.4 didrachmas

Add 
$$\frac{1}{16} = \frac{18.44}{147.84}$$

Or 148 new didrachmas, or 37 new hemidrachmas

This rate appears to have been maintained down to the time of the Indo-Scythian Kushans, when the great issue of new gold coins took place and the coinage of silver ceased. Up to this time the gold money in circulation must have consisted of the staters of Alexander, Seleukus, Antiochus, Diodotus, and Euthydemus. The Saka

Scythians coined no gold, but they issued a very large amount of silver didrachmas and hemidrachmas of the same weights as those of the Greek successors of Eukratides.

We now come to the second sudden change in the weight of the new gold staters of the Kushâns, which was reduced from the full Attic standard of 134.4 grains down to something over 122 grains.

I have taken the weights of more than a hundred gold coins of the four Kushân kings, Wema Kudphises, Kanerki, Hoverki, and Vasu Deva, which give an average of 122:50 grains. But rejecting all the specimens under 123 grains, I find—

The fourth part of this stater would be 30.8 grains, which agrees with the existing coins, as I find that 16 quarter staters of the same four kings give an average of 30.63 grains for the quarter stater.

The actual name of these gold coins has not been discovered; but as the gold money of the Gupta kings is called Dinar in several inscriptions, I have no doubt that the same name was applied to the Kushan gold coins, as they preserve the weight of the early imperial denarii aurei of Rome.

I would explain this change in the same manner as the other, that is, either by a rise in the value of gold or by a fall in the value of silver. As the Kushans struck no

silver money, the old silver coins of the Greeks and the Saka Scythians must have continued current; and as less gold was now given for the same quantity of silver, I conclude that the silver had fallen to 12 rates for 1 of gold. Adopting this rate for calculation, we get from the didrachma of 148 grains of silver a value of 1,480 grains of silver for the stater, which divided by 12 gives 123.33 as the weight of the gold stater, equivalent to 10 silver didrachmas of 148 grains.

The paucity of gold coins amongst the Indian Greeks may be explained by supposing that the old Persian daries had remained current down to the beginning of the Christian era, about which time the commercial intercourse between Europe and India had fallen into the hands of the Romans. The Roman empire had then advanced to the banks of the Euphrates, and as early as the reign of Claudius the Roman merchants had already taken advantage of the trade winds to make direct voyages to India from the Arabian Gulf. The trade rapidly increased in value until before the death of Pliny, A.D. 70, Rome annually sent to India no less a sum than fifty thousand sestertia, or about £400,000.5 This import of specie still continued when the author of the Periplus visited India in A.D. 80-89, as he notes that Δηνάριον γρυσοῦ καὶ ἀργυροῦν, or both gold and silver denarii, were exchanged at Barygaza (or Baroch) at a profit for native money. At the same time he notes that old drachmas

<sup>&</sup>lt;sup>5</sup> Hist. Nat., XII. 41 (18). Minimaque computatione millies centena millia sestertium annis omnibus India et Seres, peninsulaque (Arabia) imperio nostro adimunt." The sum is about £800,000, of which in another place Pliny gives half, or quingenties HS to India. Gibbon, c. 2, values the amount at £400,000.

bearing the Greek inscriptions of Apollodotus and Menander were still current in Barygaza. At other places in Southern India the principal import was great quantities of specie, γρήματα πλείστα.

These statements are specially valuable for the light which they throw upon the question of the coinage of the Kushan Indo-Scythians. Both writers were contemporary with the two great Kushan princes-Wema Kadphises and Kanishka; and there can be little doubt that a large portion of the Roman gold denarii imported at Barygaza must have been carried to the Panjab, where they were recoined as dindrs by the Kushan princes. That the Roman gold did find its way to the north is certain, as many specimens have been extracted from Stûpas in the Kabul valley and Panjab. But so far as I am aware very few specimens have been found elsewhere. In Southern India the Roman gold was not recoined, but remained current in company with the punch-marked silver coins. In the north the Kushans struck no silver, and this fact is explained by the statement of the Periplus that the silver coins of Apollodotus and Menander were still current in his time. Along with them the tetradrachmas of Euthydemus and Eukratides must have been in common circulation, as well as the numerous hemidrachmas of the Greek princes Menander, Apollodotus, Antimachus II., and Hermæus, and the great mass of the native punchmarked silver coins.

To this influx of Roman gold I attribute the adoption of the Roman standard of 123 grains, with the name of dinar, both of which continued in use for many centuries in Northern India.

<sup>•</sup> McCrindle's translation of Periplus, pp. 121-123.

Herr Von Sallet calls the silver coins with native legends a "reduced standard," by which I suppose him to mean that the 37 and 148 grain coins are reduced drachmas and tetradrachmas. Mr. Gardner, however, seems rather to look upon them as belonging to some Persian standard, with hemidrachmas of 40 grains and didrachmas of 160 grains. But I am not aware of any Persian standard comprising coins of these weights. The Persian siglos weighed upwards of 86 grains, and its double 172 grains. There are also many large silver pieces of 5 sigli, or quarter daries, which range up to 438.5 grains. My own heaviest piece weighed 433.5 grains, which would give a siglos of 86 6 grains. But surely the Indian Greeks and Indo-Scythians might be allowed the faculty of adjusting the weights of their coius to suit their own wants. own opinion is that the change in the weights first of the silver coins and afterwards of the gold coins was made simply to adjust the pieces to the rate of the day.

#### THE INDO-SCYTHIANS.

#### PART I.—HISTORICAL NOTICES.

The name of Indo-Scythia is first found in Ptolemy's Geography, where it is confined to the provinces on both banks of the Indus, from the junction of the Kabul river down to the sea. Dionysius Periegetes uses the term "Southern Scythians," Νότιοι Σκύθαι, for the people of the provinces, for which his commentator Eustathius substitutes the now well-known name of "Indo-Scythians." At the present day the name is made to include all the races of Scythian origin who held the countries lying between Persia and India for nearly nine centuries, from the occupation of Bactriana by the Sakas and Kushâns down to the conquest of Sindh and Kabul by the Arabs in the beginning of the eighth century A.D.

The countries thus occupied by the Indo-Scythians were-

I.—Bactriana, or the provinces lying between the river Jaxartes and the Indian Caucasus, comprising Sogdiana, Bactria, and Margiana.

II.—Ariana, or the provinces to the south of the Indian Caucasus, from Herat on the west to the Indus on the east, comprising Aria and Drangiana, Arakhosia and Gedrosia, with the Paropamisade of the Kabul valley.

III.—The Panjab, or upper provinces of the Indus and its tributaries, from Taxila to the junction of the Five Rivers.

IV.—Sindh, or the lower provinces of the Indus valley, which, according to Ptolemy, included both Patalene and Syrastrene.

<sup>1</sup> V. 1088, Ινδών πάρ ποταμών Σκύθαι εννάιουσιν.

The Scythians who opposed Cyrus and Alexander on the Jaxartes are described by the Greeks as Massagetæ, while their Persian neighbours knew them only as Sakas, or Sacæ. Pliny says that the more ancient writers called them Aramii, and adds that both in their life and habits they resembled the Parthians. This is confirmed by Justin, who declares the Parthians to be only a separate branch of the Scythian family.

The country which the Scythians occupied between the Jaxartes and Oxus was known to the ancient Persians by the general name of Turan, and the name of Turanian is now applied to designate the Scythic version of the cuneiform inscriptions of Darius. All the provinces to the south of the Jaxartes belonged to the Achæmenian kings of Persia. and the Scythic version of the inscriptions must have been published for the information of the Turanian subjects of There can be no doubt therefore that the great bulk of the people on both banks of the Oxus were of Scythian origin. Thus, according to both Herodotus and Ktesias, the Parthians, Hyrkanians, and Derbikkæ, who were all of Scythian descent, were located to the south of the Oxus as early as the time of Darius. In the cuneiform inscriptions the Umu-warka, or Amurgii Scythians, are described as forming an integral part of the Persian empire; and in the time of Xerxes they furnished a contingent for the invasion of Greece. During the long Persian rule it is probable that the people of the fertile provinces of the Oxus had become more civilised than those to the north of the Jaxartes, by continued intercourse and

<sup>&</sup>lt;sup>8</sup> Plinii, Nat. Hist., vi. p. 19. In the Babylonian version of the inscriptions of Darius, Namiri is substituted for Saka. Perhaps Aramii should be Amarii.

frequent intermarriage with their Aryan rulers. In fact, Strabo describes the manners of the Bactrians and Sogdians as more civilised, although their mode of life was still nomadic.<sup>9</sup>

The language spoken by these Turanian subjects of Persia must therefore have been closely connected with that used in the cuneiform inscriptions of Darius. The names of people and of things which have come down to us show no traces of Semitic origin, but have many strong affinities with the Aryan language of India and Persia. Thus saprakim, "battle," must be connected with the Sanskrit samara, which is found in the name of Samarkand, while tipi, a "tablet," is the same as the Pali lipi. But the bulk of the language would appear to be different, and to have more affinity with some of the dialects of Northern India. Justin calls the language mixed Scythian and Median. The following examples may be given in illustration of this opinion.

Amongst the Dards of the Indus the king's title is Tham, which is perhaps only a dialectic variety of the old Hiong-nu Vam, and is probably connected with the Sanskrit dam, the Greek δαμάζω, the Latin dominus, and the English tame. This title, I think, corresponds exactly with Justin's Tanaus, King of the Scythians. Herodotus mentions Tomyris as Queen of the Getæ, and Pliny explains Temerinda as "mother of the sea." By adding the feminine suffix ere to tham, we get both Tomyris and Temeri, and by adding dd = "water," we get Temerinda, as "Queen of Waters." The common terms for water amongst the aborigines of N. India are dû, de, di, or ta, te,

<sup>&</sup>lt;sup>9</sup> Geography, xi., 11, 8.
<sup>10</sup> Justin, xli. p. 2.

ti. The longer name of Thamimasada, which Herodotus gives for the "King of the Sea," may perhaps be explained by the interposition of massa=great, thus making Thamimasa-dâ, or "king of the great water," or "lord of the sea."

That this word for water once prevailed over Northern India may be seen in the names of  $Pad-d\hat{a}$ , or Ganges,  $Bahu-d\hat{a}$ , or Brahmaputra,  $Narma-d\hat{a}$ , or Narbada,  $Mana-d\hat{a}$ , or Mahanadi,  $Vara-d\hat{a}$ , or Warda River, alias "Banyan-tree River." Other names are  $Kalin-d\hat{a}$ , or Jumna, Betwan-ti, or Betwa, and  $Kiy\hat{a}n-ti$ , or Ken. I think it probable also that such names as Charmanvati,  $Air\hat{a}vati$ , and others may have been Sanskritized from older forms in ti. We have an example in the  $P\hat{a}ra-ti$ , a principal branch of the Satlej, which has no connection whatever with  $P\hat{a}rvati$ .

The different races of Scythians which have successively appeared as conquerors in the border provinces of Persia and India are the following, in the order of their arrival:—

- B.c. ? Sakas or Suca, the Su or Sai of the Chinese.
- B.C. 168. Kushans, or Tochari, the Great Yue-chi of the Chimese.
- A.D. 440. Kidarita, or later Kushans, the Little Yue-chi of the Chinese.
- A.D. 470. Ephthalites, or white Huns, the Ye-tha-i-li-to of the Chinese.

The most detailed accounts of these different races we owe to the Chinese; but the short notices of classical authors, both Greek and Roman, are often of great value, either in confirming the Chinese accounts or in fixing the dates of important events. Generally they serve to corroborate each other, but there is a lamentable paucity of intelligible names in the Chinese records, owing chiefly to the incapacity of the Chinese syllables to express

foreign names, and partly also to an absurd practice of the Chinese people in altering some of the names so as to obtain an opprobrious or derogatory meaning in Chinese. Thus the Ta-yue-chi meant only the "Great Lunar Race," who were not recognised by the later Chinese writers under the name of Tu-ho-lo, or Tochari, as described by Hwen Thsang. Similarly the ancient name of Kipin (or Kophene) was concealed under the later appellation of Tsau-ku-ta, and was absolutely lost under that of Siei-iu, which was imposed by the Empress Wu-hen, shortly after A.D. 684. Similarly also the Ye-tha-i-li-to, by having their name curtailed to Ye-tha, were not recognised as the Ephthalites, or White Huns, although they were both recorded to have been dominant in the same country at the same time. On the other hand the ancient name of Hien-yun was changed to Hiong-nu, or "unhappy slaves," which effectually disposes of their supposed connection with the Huns. With these preliminary remarks I will now try to put together the scattered links of Indo-Scythian history as derived from all sources.

During the sway of the Achæmenian kings the inroads of the Scythians of the Jaxartes were kept in check by the frontier satraps. After the death of Alexander the same check was maintained under the vigorous rule of Antiochus, the Governor of the Eastern Provinces, who resided at Margiané, or Merv. But about eighty years later they had already begun to give trouble to the Bactrian Greeks, and Euthydemus was allowed by Antiochus the Great to retain his kingdom, on the plea that, if he was weakened, he would not be able to withstand the Scythians. Early in the second century B.C., as related by the Chinese, the horde of the great Yue-chi, or Tochari, was driven across the Jaxartes by the Hiong-nu, and, after

the loss of their king in battle, settled in Sogdiana in B.c. 163. The Sus or Sais, or the Massagetæ or Sakas of the Greeks and Persians, retired before them, and after a time the Yue-chi continued their advance into Bactria, to the south of the Oxus, of which they took possession about 130 B.C. The Ta-hia, or Dahæ, then retired to the west towards Margiana, while the Su or Sakas retreated to the south towards Drangiana.<sup>11</sup>

Mithridates I. of Parthia, who died in B.C. 135, took advantage of this period of confusion to wrest the two satrapies of Aspiones and Turiva from Eukratides, at the same time that he checked the Scythians. The position of these satrapies is unknown, but I conclude that they must have been on the west and south-west frontiers of the Bactrian kingdom, i.e. in Margiana and Aria, along the rivers Margus and Arius. The annexation of these provinces would have been easy, and would have brought the Parthians face to face with the retiring Saka Scythians. The victories of Mithridates would have stopped the further progress of the Dahæ, while the Sakas managed to make good their retreat into Arachosia and Drangiana. That they reached the latter province we know from the fact that after their occupation it received the name of Sakastene [Σακαστήνη Σάκων Σκύθων], a name which was altered to Sejistân by the mediæval writers, and is now preserved in the modern Sistân.

The Chinese fix the date of the occupation of Bactria by the Great Yue-chi or Tochari about B.C. 130, which agrees with the period of the defeat of Phraates II. of Parthia, who fell in battle with the Saka Scythians in B.C. 127 or 126. These Scythians had been engaged to

<sup>11</sup> Remusat, Nouveaux Mélanges Asiatiques, i. p. 205.

join him in his war against Antiochus, but as they arrived too late he refused to pay them, on which they invaded his territory.

His successor, Artabanus II., was killed three years later, B.C. 124-123, in battle with the Tochari. notice of these Yue-chi is derived from the Chinese General Chang-Kian, who in B.c. 126 was sent by the Chinese Emperor Wuti to obtain their aid against the Hiong-nu. He was captured by them, but after ten years managed to escape, and returned to China in B.c. 116, having failed to induce the Yue-chi to join in a campaign against the Hiong-nu. He reported that he had found the Yue-chi in full possession of Bactriana. From another notice we learn that about 100 years later, or say about B.C. 16, the chief of the Kushans conquered the other four tribes of the Yue-chi, and assumed the title of "King of the Kushans." This chief, who was named Khieu-tseu-kio, has been identified with Kujula Kadphises of the coins. He crossed the Indian Caucasus and overran Pota and Kipin, and took possession of the Kabul valley. Pota has been identified by Viv. de St. Martin with Pathánka or Pukhtánka, the country of the Pathâns, while Kipin is generally admitted to be Arakhosia, which was anciently known as Kophene.

Later notices of the progress of the Sakas and Kushans will be best kept separate. There can be no doubt that they came into conflict at an early date in the Panjab, as that province was annexed by the Kushan King Yun-kao-ching, the son of Kujula, in the first century A.D., while we know from the evidence of the coins that the great Saka kings, Moas, Azas, and Azilises must have had a firm hold of it during the first century B.C.

The origin of the name of Saká is still uncertain. The

general opinion is in favour of the Persian Sag, a "dog," which is still used as a derogatory term by the Persians for their enemies. I have seen a short history of Bahâwalpur, in which the Raja of Bikaner was throughout designated as the Sag. But there still exists a tribe to the north-east of Ladâk who bear the name Sok-po, or simply Sok as po is the masculine suffix in Tibetan, Sok-po meaning a Sok-man, and Sok-mo a Sok woman. Pliny's statements that they were anciently called Aramii is perhaps supported by the Babylonian version of the inscriptions of Darius, in which Namiri, or the "hunting leopards," is substituted for Saka. By a slight transposition the Aramii would become Amarii or Namiri.

#### SAKAS, OF SACE-SCYTHIANS.

According to the Chinese accounts the Su or Sai, or Sakas, on being driven out of the countries on the Oxus by the Yue-chi, or Tochari, retired to the south and occupied Kipin, or Kophene, comprising Arakhosia and Drangiana. The tribes of the Sai then spread over the country and formed different kingdoms, and it is specially stated that all the dependencies of Hiau-siun and Siun-tu (Sindh) were inhabited by ancient tribes of the Sai. 12 The country which they occupied was then called Sakastene after them. 13 It is the Sejistân of the early Muhammadans, and the Sistân of the present day. Isidorus of Kharax

<sup>&</sup>lt;sup>12</sup> Remusat, Nour. Mélanges Asiatiques, i. p. 205. Pauthier, Chine, i. p. 242. A third tribe of the Sai was named Kuen-to. It numbered 300 families.

Avienus, v. p. 1297, uses the form of Sayam infidum; and Orosius also uses Sayam as the name of the country to which St. Thomas was sent.

calls it Σακαστήνη Σάκων Σκύθων, and gives the following names of its towns: 1. Barda; 2. Min; 3. Palakenti; 4. Sigal; 5. Alexandria; 6. Alexandropolis. The fourth town Sigal, which is designated as Regia Sacarum, or the "capital of the Sakas," I would identify with Shâl, by the simple elision of the letter g. Shâl or Kotta ("the forts," vulgo Quetta) has always been a place of consequence. Its commanding position, on the high road from Kandahar to the Lower Indus, must have insured its occupation at a very early date. For the same reason it is now occupied by a British garrison. It is most probably the Kottobara of Ptolemy.

According to Stephanus of Byzantium the two cities named Arakhosia and Arakhoti, were near the country of the Massagetæ, or in other words near Sakastene, the country of the Sakas, who were of the same race as the Massagetæ.

I will now give a few notices of each of the three different provinces which the Sakas occupied: 1. Sakastene or Sejistân; 2. Sindh; 3. The Panjâb.

#### 1.—THE SAKAS OF SAKASTENE AND KIPIN.

Closely connected with the Su or Sakas were the Tahia, or Dahæ, who were driven out of their country by the Tochari or Kushâns at the same time. These Dahæ are said to have retired to the west. Now Dahæ was not a true national name, but only a term of reproach or abuse given to the nomads by their Persian and Indian neighbours. The original word in the Sanskrit, dasyu, "an enemy or robber," which in Persian became dahyu, from which the Greeks formed Dahæ,  $\Delta \acute{a}a\iota$ , and also  $\Delta \acute{a}\sigma a\iota$ . The spoken form in India is  $D\acute{a}ku$ , which is found in the Latin

Dacia. A similar term is still applied to the people on the east of the Caspian, whose country is now called Daghistan or Dahistan, or "Rebel-land."

Strabo couples the Dahæ with the Sacæ and Massagetæ, and adds that they were divided into three tribes—1. Parni or Aparni; 2. Xanthii or Xandii; and 3. Parii or Pissuri. As Justin <sup>14</sup> calls the first tribe Spartani, I conclude that Strabo's name must have been Saparni, and that these people, the worshippers of Sapal or Herakles, must have given their name to Zâlulistan, or Arakhosia and Drangiana, which is only another name for Sakastene.

The Xanthii are very probably the Zaths of the early Arab writers. As the Zaths were in Sindh to the west of the Indus, this location agrees very well with what we know of the settlement of the Sakas on the Indian frontier. In fact the Chinese expressly say that all the dependencies of Hien-siun and Siun-tu (Sindh) were occupied by ancient tribes of Sai, or Sakas. 15

According to the Chinese these Saka tribes afterwards separated, and formed several distinct states under separate rulers. This statement seems to be borne out by the three distinct dynasties of kings, whose names have been preserved to us on the coins; the one proceeding from Vonones in Arakhosia, a second from Moas and Azas in the Panjåb, and a third from the Kshaharâta tribe in Sindh, to which the great Satrap Nahapâna belonged.

The Kshaharatas would appear to have extended their territories beyond the limits of Sindh into Kachh (the Odombeores or Audumbara) and Gujarat (Surashtra), and

<sup>14</sup> Justin, xli. p. 1.

<sup>&</sup>lt;sup>14</sup> Remusat, Nouv. Mélanges Asiatiques, i. p. 206.

perhaps even to Malwa. One inscription of the Satrap Nahapâna is dated in the year 42, but unfortunately no era is mentioned. If referred to the Seleukidan century beginning in 12 s.c., the date would be 42 - 12 = 30 A.D., or just forty-eight years before the establishment of the Saka era, and the probable date of Chashtana of Ujain (Tiastanes of Ozene).

I think it probable that some reference to this southern invasion of the Sakas may be preserved in the short Sanskrit work named Kâlakachârya Kathâ, describing the "Inroads of the Indo-Scythians into India." This short treatise was brought to notice by Dr. Bhau Dâji, in the Journal of the Bombay Asiatic Society.16 The account is as follows: - "Shortly before the Christian era the Sakas held possession of the country on the western bank of the Indus under petty chiefs called Sáki, who were subject to one paramount ruler named Sahina-sahi. The Sakas crossed the Indus into Sûrashtra, and advanced to Avantidesa (Mâlwa), where they defeated Raja Gardabhilla, and took possession of Ujain. Here they remained for four years until they were driven out by Vikramaditya, son of Gardabhilla, in B.C. 57."

As the dynasty of the Kshaharâtas was succeeded by the new dynasty of Chashtana (or Tiastanes), I think it most probable that the notice by the author of the Periplus of Parthian rivals driving out one another must refer to these two dynasties of Scythian princes. The names of Nahapâna and Chashtan, which are certainly not Indian, seem to have some connection with the similar forms of Artapanus and Haustanes, both Parthian or Partho-Scythian names.

<sup>16</sup> Journal, ix. p. 189.

How firmly settled were these Sakas of Western India is most decidedly shown by some of their inscriptions which still exist in the Nåsik caves. Thus I find that the son-in-law of the Kshaharåta King Nahapåna calls himself a Saka. In one inscription he is designated as the Saka Ushavadåta, the son of Dinika, and the husband of Dakshamitrå, the daughter of Nahapåna. None of these names are Indian, except perhaps that of Dakshamitrå. Another inscription is dated in the year 42, on the 15th of the bright half of Chaitra. As it must precede the establishment of Chashtana in A.D. 78, I am inclined to refer the year to the Seleukidan century which began in 12 B.C., which would fix the date to B.C. 12 — 42 = A.D. 30.17

Two other short inscriptions record the gifts of another Saka chief named Dâma-cheka.<sup>18</sup>

The Sakas of Sejistân are repeatedly mentioned in the history of the Arsakian and Sassanian kings.

In s.c. 77 or 76, Sanatroikes obtained the throne by the aid of the Sakarauli Scythians, amongst whom he had previously sought refuge.<sup>19</sup>

In B.C. 33 Phraates IV. fled to the Scythians, who replaced him on the throne.

In a.D. 16 Artabanus III., with the assistance of the Dahæ and Sakæ, obtained the throne. He had previously lived amongst the Dahæ.<sup>20</sup>

In A.D. 40 Goterzes was similarly assisted by the Dahæ.

<sup>&</sup>lt;sup>17</sup> See Bombay Journal, vii., West's Inscriptions from Nasik, No. 14.

<sup>16</sup> Ibid., Inscriptions Nos. 1 and 2.

<sup>&</sup>lt;sup>19</sup> Phlegon apud Photium, quoted by Mr. Percy Gardner, and Lucian, Macrob. 15.

Dosephus, Ant. Jud.; Tacitus, Ann. ii. 8.

A.D. 230 Artaxerxes, the founder of the Sassanian monarchy, was unable to reduce the Sejistânis. According to Agathias (ii. 164), quoted by Gibbon, "the princes of Sejistân defended their independence during many years," and were not finally conquered until the reign of Varaban II., A.D. 275—292. Gibbon calls the Sejistânis "one of the most warlike nations of Upper Asia."

From this time the province of Sejistân, or Sukastene, formed one of the tributary provinces of the Sassanian empire. Accordingly in A.D. 350—357 the Sejistânis furnished a contingent to Sapor II. for the siege of Amida. They were reckoned the bravest of his troops, and they brought into the field a large body of elephants.<sup>21</sup>

In A.D. 650 Yezdegird, the last Sassanian king, fled from Istakhar through Kermân and Sejistân to Khorasân, and in the following year a Muhammadan army occupied Zarang, the capital of Sejistân.<sup>22</sup>

#### 2.—THE SAKAS IN SINDH.

An early notice of the Saka Scythians on the Indus is given by the author of the *Periplus*, who says that "Minnagar, the metropolis of Scythia, was in his time governed by Parthian princes, who were perpetually at strife among themselves, expelling each the other." The date of the *Periplus* is not accurately known. But the mention of Zoskales (Za Hakale), King of Abyssinia, who reigned from 77 to 89 A.D., and of a King of the Nabathaians, whose kingdom was absorbed by Trajan in A.D. 105, serve to fix his date between 80 and 100 A.D. As we

Translation by McCrindle, p. 108.

<sup>21</sup> Ammian, Marcell., xix. pp. 2, 8.

<sup>&</sup>lt;sup>22</sup> H. M. Elliot, Muhammadan Hist. of India, by Dowson, ii, p. 218.

know that the Kings of Parthia proper at this time did not possess any territory even near the Indus, the so-called Parthian rulers must refer to the Indo-Scythian Sakas, who were of the same race as the Parthians.

The position of Minnagar has not been identified, but I feel nearly certain that it must have been at Brâhmanâbâd, which is one of the oldest sites in Sindh. It was the "city of Brahmans" of Alexander's historians. Its Hindu name was Brahmanawâsi, which was changed to Brâhmanâbâd by the Muhammadans, who afterwards built Mansura close to it.

As Pliny lived within a very short time of the author of Periplus, it is quite possible that the dynasty of Parthian kings then ruling on the lower Indus might be mentioned by him. I find the Odombeores or Audumbaras, the people of Kachh, duly recorded, and immediately preceding them are the Varetatæ or Suarataratæ. As the name has evidently been corrupted, I think it not impossible that the true reading may have been Suaratæ, and that they may be identified with the Kahaharûtas of the western cave inscriptions, of one of whose rulers, named Nahapûna, we possess coins as well as inscriptions. As the Kshaharâtas were certainly succeeded by another Scythian race under Chashtan (Tiastanes of Ptolemy), the description of Parthians expelling each other would seem to be well illustrated by the proposed identification.

There is now a gap of several centuries in the history of Sindh which is not likely ever to be filled up, as all the histories of Sindh begin with the Sahasi dynasty which ruled for one hundred and thirty-seven years preceding the accession of the Brahman Chach, that is from

<sup>&</sup>lt;sup>24</sup> Plinii, Nat. Hist., vi. p. 28.

A.D. 505 to 642. The names given in the Chachnama are corrupt, but they are quite sufficient to prove that the kings were Scythians. All of them are named Sahi, or Sâhasi, which is the well-known Scythian title. Five kings are mentioned, of whom the only thing related is that the fourth king was attacked and killed by Nimroz (Parvez, King of Persia) in A.D. 627. But on the authority of Kosmas the new dynasty must have been White Huns or Ephthalites. They would therefore have had no connection with the first Saka conquerors. Unfortunately no names are recorded in the histories of Sindh, but each is called simply Rai Sâhi or Sâhasi. As this seems to be only the common Scythian title of Shahi, we have no means of discriminating one prince from another. I believe, however, that I have found the name of the leader in Jibawin, who formed the great reservoir of Suraj Kund at Multân. His name is also variously written as Jaswin, Jasur, and Jalbur, but as I possess coins bearing the names of Jabubal and Jabukha, I incline to adopt Jabuwan as the correct form.

The testimony of Kosmas, who actually visited the country to the west of the Indus about A.D. 530, is perhaps sufficient to show that the Scythian dynasty which ruled over Sindh from A.D. 507 to 642 must have been White Huns. As the inscription of Yasodharma, King of Mâlwa, A.D. 532, mentions that he ruled over countries which neither the Guptas nor the Hûnas had possessed, there is some difficulty as to what countries are intended. The Panjâb is most probably alluded to, as no trace of Gupta rule has yet been found there. Perhaps Sindh is also referred to, in which case the rule of the Hûnas in the time of Kosmas must have been confined to the western bank of the middle Indus. The histories of

Sindh are unanimous in claiming Mekrân as one of the provinces of the kingdom during the rule of the Sâhasi kings. I infer therefore that Yasodharma's conquests did not extend to Sindh, but may probably have included Northern Rajputâna. The mention of the overthrow of Sakas in Ruma (in the Salt country) by Vikramâditya about A.D. 530 must refer either to the Sûmbhar lake district near Ajmer, or to the Salt Mines in the Panjâb, and at Kâlâbagh to the west of the Indus. The latter seems the more probable, as the city of Rhon, 'Pŵv, is described as belonging to the Scythian Gandarike, just as Hekataeus describes Kaspapuros.

I annex a list of these Scythian kings of Sindh as preserved in the native histories. If their title was Shāhi, they would have some claim to be taken as Sakas, as the White Huns had adopted the title of Khākān.

A.D. Kings of Sindh.

505. Dîwâîj, ? Jibawin.

533. Siharas, Sahiras, ? Gollas of Kosmas Indicopleustes.

566. Diwâij, or Rai Sâhasi, or Shâhi-shâhi.25

600. Siharas, Sahiras invaded by Persians in A.D. 627, killed.

627. Sâhasi, Rai Shâhi.

642. Chach Brahman conquers Sindh.

The territory held by these princes extended from the frontier of Kashmir to the mouths of the Indus, and from Mekrân to the frontier of Kanauj. In A.D. 641, Hwen Thsang says that the reigning king was a Sin-to-lo, that is a Sudra. The names seem so much alike, Sâhasi, Sahiras, and Rai Shâhi, that I cannot help suspecting they may be only a title repeated with slight changes as Rai-Shâhi or Shâhi-Rai. Now Shâhi is a well-known Scythian

<sup>&</sup>lt;sup>25</sup> H. M. Elliot, Muh. Hist., i. p. 405, gives five names from the Tuhfat ul Kiram.

title which is found on most of the Indo-Scythian coins of the Sassanian period. This is the more probable as I find mention of an ancient King of Multân named Jibautn, who excavated the Suraj Kund and built a great temple containing a golden image. He may perhaps be the founder of the dynasty Diudij. A more probable identification is that of Diudij with the prince named Devajari, two of whose silver coins were found in the great Manikyala Stûpa by General Ventura.<sup>26</sup> The Indian legend on these coins I read as follows.—

Sri Hitivi-cha Airán cha parameswara. Sri Shahi-tigin Devajári.

The fortunate lord of India and Persia. The fortunate valiant prince (Shâhi) Devajâri.

It will be observed that all the leading consonants d, v, j, occur in both names joined with a long d.

All the other recorded names appear to be only corruptions of the title of Shâhin Shâhi.

I am disappointed at not finding any trace of the name of Gollas in these lists of the native historians of Sindh. I am even more disappointed at the omission of all mention of Vasu Deva, King of Multan, Uch, and Bahmana, as declared on his coins. He was almost certainly one of the rulers of Sindh of this very dynasty, as the style of his coins shows that he belonged to the later Sassanian period.<sup>27</sup>

Both of the coins just noticed might perhaps be said to belong properly to Multân. But there is a large number of coins in all three metals, which bear only the title of Sri-Shâhi, or in some cases only Shâhi, which might

See my Archæological Report, v. p. 121, and Pl. XXXVII.
Ibid.

belong to the kings of Sindh, whose names have not been handed down. But as most of these anonymous coins, and as I believe that all of the gold ones, have been found in the Northern Panjâb or Lower Kabul valley, I am inclined rather to assign them to the Rajas of Sâkala and Gândhâra. It is unfortunate that very few of the names have been preserved, and these mostly disguised in the strange forms of Chinese monosyllables.

Masudi records that a prince named Ranbal, who reigned in the valley of the Indus, after subjugating Eastern Persia, had "advanced to the banks of the Tigris and Euphrates." This conqueror may, I think, be identified with the king who on his coins claims to be lord "both of India and of Persia" (Sri Hitiri-cha Airta-cha paramesucara). Such an inroad might perhaps have been successful after the murder of Khusru II. in 628 A.D. This is the more probable as the ruler of Sindh had to revenge the invasion of his own country and the death of his predecessor. As Parvez had invaded Sindh by Kirman and Mekran, the Sindhian king would no doubt have followed the same route. I see nothing improbable in this raid, as the Persian empire never recovered its strength after the death of Parvez.

Kaikan or Kikan, an outlying district of Sindh on the west towards Mekran, suffered from several early invasions of the Muhammadans, who were intent upon seizing horses of a fine large breed for which the country was famous. It is the Ki-kiamg-nu of Hwen Thang, who also mentions its good horses. Bilâduri calls the people Türks, by which term he probably meant Indo-Scythians. The province seems to be identical with the northern and

<sup>&</sup>quot; Elliot's Muham. Hist. of India, ii. p. 418.

hilly half of Biluchistan, comprising Kilât and the country of the Brahûïs. In the Chachnâma mention is made of a high mountain called Kaikûvân. I suspect that this name may be identified with the fort of Kûpishkûnish, in Arakhosia, which was seized by a rebel against Darius Hystaspes. We know that the name of the town of Kaithal is a simple contraction of Kapisthala (the Kambistholi of Arrian). In the same way I think that Kâpishkânish might be contracted to Kaikân. Sir Henry Rawlinson thinks that the place must be looked for in the direction of Sistân, as the satrap of Arakhosia would probably have met the force advancing from Persia on the frontier of his province

#### 3.—SAKAS IN THE PANJAB.

There is no direct historical evidence that the Sakas ever occupied the Panjâb, but the three great kings, Moas, Azas, and Azilises, whose coins are found chiefly in the Panjâb, and very rarely to the west of the Indus, are universally accepted as Saka Scythians. They certainly preceded the Kushân Prince Kujula Kadphises and his successors, with whom they seem to have nothing in common, whereas their connection with the Saka dynasty of Vonones and his successors is undoubted, as the name of Azas is found joined with those of Vonones and Spalirises. They agree also in having an extensive silver coinage of the same types, without a single specimen of gold, while the Kushâns have an abundant gold coinage and no silver money, excepting only a solitary piece of Wema Kadphises.

<sup>&</sup>lt;sup>20</sup> I may note here that my friend Pandit Bhagwan Lal had a gold coin of Spalahores, but it was a forgery.

There is, however, a decided testimony of Saka occupation of some portion of Western India as late as the latter half of the fourth century in the mention by Samudra Gupta of the presents received from the Kushâns, Sakas, and Murundas: "Daivaputra Shâhi-Shâhânu Shâhi, Saka, Murundaih."

Sakas are also mentioned in the beginning of the fifth century as opponents of a Vikramâditya of Mâlwa, and to them I would attribute the rude Indo-Sassanian coins which are now so abundant in Rajputâna. According to the Hindu accounts this prince conquered the Sakas in Ruma.30 He is perhaps the same prince as Yasodharma, of Mr. Fleet's Mandisur inscription, who possessed countries which neither "the Gupta kings nor the Hûnas could subdue." 31 The same prince also boasts of having subdued King Mihirakula. As Yasodharma's inscription is dated in A.D. 532, it seems very probable that he must be the Vikramâditya of the native legend, the contemporary of Kâlidâs and Varâhamihira. But the Mihirkul whom he subdued must have been the Mihirkul, son of Toramâna of Malwa, and not the great Mihirkul, Raja of Kashmir

It is worthy of remark also that these Saka princes, Azas and his successors, must have employed Indian servants, such as the General Aspa Varma, son of Indra Varma, as well as a son of Vijayamitra, whose name is lost on my coins. Others were no doubt only Scythian adventurers, like Jihonia and Rajubul, whose coins belong to the same period. They must have been in the service of some of the later Greek princes, and who, as their

Bhan Daji in Journal of Bombay Asiatic Society, vi. p. 26.
 Indian Antiq., xv. p. 255, Mr. Fleet's inscription.

masters' power became weaker, had gradually acquired strength, until some of them became independent. Moas, for instance, may have been a successful general under Menander and Apollodotus, and after their death a successful rebel, who wrested the Panjâb from Hermæus. The coins of Moas are found chiefly about Taxila (Shâhdheri and Mansera) and in the country between the Indus and Chenâb rivers:

Some of the later Greek princes would seem to have been driven towards the East—Artemidorus perhaps to Kashmir, and Dionysius, Zoilus, and Straton II. to Kangra.

The coins of Azas are also found chiefly in the Western Panjāb; only a few specimens are found in the lower Kabul valley. I obtained a small find from Bajāwar, but I saw twelve large pieces dug up from the inside of a temple at Shāhdheri or Taxila. Not even one was found by Masson at Begrām, and I may say the same for Mathura, which has yielded a considerable number of the coins of Menander and Apollodotus, Antiochus II. and Straton, with a single type of the nameless king.

The find-spots of the coins of Azilises are the same as those of Azas. One large find of silver coins was made on the bank of the Jhelam river, in the hills between Barahmula and Jhelam.

The rule of Moas and his two successors may have lasted from about 100 s.c. down to the beginning of the Christian era, when the country fell into the hands of the Kushans.

I can perhaps best illustrate my idea of what may have taken place in the Panjâb on the break up of the Greek power by referring to what actually took place in the same country after the break up of the Muhammadan empire of Delhi. All over the country the petty chiefs made themselves independent, or nearly so. Musalmân chiefs in Multân and Mamdot, Sikh chiefs in Gujrânwala, Kapurthala, Patiâla, Nabha, and Kaithal, and an Englishman, George Thomas, in Hânsi. After a time Ranjit Singh of Gujrânwâla gradually managed to overcome most of his rivals, just as I suppose Moas to have done in ancient times.

There would appear to have been several other adventurers in early days in the Panjab, who are known to us chiefly from coins. Such are the satrap Jikonia, son of the satrap Manigul, who perhaps gave his name to Mânikyâla, and the satrap Rajubul, who almost certainly held Sangala, as his coins are found in the Eastern Panjâb, and bear the Greek monogram EY for Euthydemia or Sangala.

There are coins also of rajas of the same period, who must have been more or less dependent on the greater chiefs. One of these was *Dhâra Ghosha*, Raja of *Odumbara*, that is of the country of *Dameri* or *Nûrpûr*. Other chiefs are the *Kuninda* Raja Amoghabhûti, and two others named Mahadeva and Rudra Varma. All of these, by their names, must have been native Hindus.

Apparently the Sakas never held any possessions in the Kabul valley, but they probably held Ghazni, which would account for some of their coins being found about Kabul. Whatever hold they may have had on the Panjâb must have been soon lost on the conquest of the country by the Kushâns under Yun-kao-ching, in the first century A.D.

There is a curious passage in the Mojmal ut Tawarikh, which certainly refers to these countries on the Indus, and though the period mentioned is said to be that of

Alexander the Great, it is probable that it may preserve some distorted account of the history of the early Saka kings of Sindh, as it cannot possibly refer to the time of Alexander. The following is a brief summary of the passage.<sup>32</sup>

In Sindh there were three kings until the time of Kafand, ففند, who conquered them all. Kafand was not a Hindu. In the Chachnâma he is called Kaid the Hindu. Kafand sent his brother Sâmid to Mansura to expel Mahra, فهره, the Persian. Sâmid sought the assistance of Hâl, King of India, and Mahra fled. When Kafand died his son Ayand, ايند, succeeded him, and divided his territories into four principalities.

- Askalandûsa, or Askalandra.
- 2. Zor (Alor) with Anj (? Uch).
- 3. Samid's territory (? Saminagar, or Thatha).
- 4. Hindustan, Nadama, and Lohana.

Ayand's son Râsal, راسل, succeeded him, but after a time he was expelled by a rebel. Râsal left two sons, Rowâl برفاريس, and Barkamâris, برفاريس. The latter killed his brother, and became so powerful that all India submitted to him.

Hål is the well-known name of Sålivåhan, the founder of the Saka era in A.D. 78.

A similar division of the kingdom of Sindh into four principalities is given in the Chachnama, as follows:—38

- 1. Askalandra, with Pâbiya
- 2. Alor (with Sewistan).
- 9. Brahmanabad.
- 4. Multan and Sikka.

38 Ibid., i. p. 138.

<sup>32</sup> Elliot's Muham. Hist., i. p. 108.

These divisions seem to be intended for the same as those of the Mojmal ut Tavárikh. They were in existence during the rule of the Sâhi kings (A.D. 505—642), and were upheld by Chach, their immediate successor. Pâbiya is said to have been to the south of the Biâs River. It was therefore in the Panjâb, and consequently must have been to the north-east of Multân. I would identify it with Depâlpur, and then the strong fort of Askalandra would correspond with Sherkot, or Alexandreia Soriane.

The dominions of the Saka kings of Sindh are said to have included Mekrân up to the frontiers of Kirmân and Kaikân or Kikân up to the frontiers of Khorasân. Before this time Sakastene or Sistân had become tributary to the Sassanian kings of Persia, while Arakhosia or Kandahâr, the Kipin of the Chinese, would appear to have formed an independent kingdom.

About A.D. 530 Kosmas Indicoplanates travelled over the country to the west of the Indus, which was then under the rule of a king named Gollas. He calls the country Ouvea, Unnia. Apparently at that time the name of the White Huus of Sogdiana, the opponents of the Sassauian kings, had become so well known that all peoples between India and Persia were supposed to be of the same race. At this very time also, or A.D. 550, Varâha Mihira places a tribe called Hâra-Hauras in the north-western Panjâb.

The coins afford but little or no assistance. According to the Chinese the people of Kipin had coins both of gold and silver, with the head of a man on one side and a horseman on the other side.<sup>34</sup> This description agrees only

<sup>&</sup>lt;sup>14</sup> Remusat, Nouv. Mélanges Asiat., i. p. 206.

with the coin types of Minüs and the nameless king. But there are no gold coins of either of these kings, and only copper coins of the latter. In fact there are no known gold coins of any of the Saka kings.

I see that Wilson describes the coins of the Sakas as having a horseman on one side and a portrait or figure of a man on the other. 35 If this description be correct it would include all the coins of the known Saka kings of Kipin, Vonones, Spalahora, Spalgadama, and Spalirisha, as well as the Panjâb kings Moas, Azas, and Azilises.

In the Chinese notices of Kipin it is said that a king named U-to-lao was a contemporary of the Emperor Wuti (d. 87 B.C.), and that his son was driven from the throne by a rebel. This looks like a repetition of the story of Ayand and his son Râsal. But these names seem to offer no resemblance to any of the coin names of Vonones, Spalahora, Spalgadama, or Spalirisha. I suspect, however, that the rebel chief may be the king named In-mo-fu, who, according to the Chinese, drove U-to-lao's son from the throne and made himself King of Kipin in B.C. 49. This date is ascertained by the accession of the Emperor Hiao-yuan-to in B.C. 48, who broke off all relations with foreign countries, and would not receive In-mo-fu's embassy.

To this king I would ascribe the large silver coins (tetradrachms) with the title of *Turannountos* and the name of *Herāus* or *Miāus*. In 1861 I read the names as Herāus, but some years later, when I obtained some oboli of the same king, I adopted the reading of *Miaūs* or *Miaius*. Mr. Gardner prefers Herāus, and attributes the coins to a king

<sup>25</sup> Ariana Antiqua, p. 811.

of the Sakas, by reading the continuation of the legend as **EAKA KOIPANOY.** But to this reading I strongly demur. I possess half-a-dozen tetradrachms and thirteen oboli, and on none do I find the letter K of ZAKA, while on every specimen I find the addition of the letter B to this word. On one of my coins the word is distinctly ΣANAB; on another specimen I find ΣANAOB. I also find KOPLANOY instead of KOIPANOY, and as this is the early rendering of the tribal name of the Kushans on the coins of Kujula Kadphises I feel inclined to adopt it, and to read the difficult word Sanaob as a Greek rendering of the native title of Teanyu or Chanyu, "Son of Heaven," or king. The whole legend would then be of the paramount ruler: Miaüs (or Heraus) would therefore be a Kushan king. On one of my coins I find HNYANOY instead of KOPEANOY.

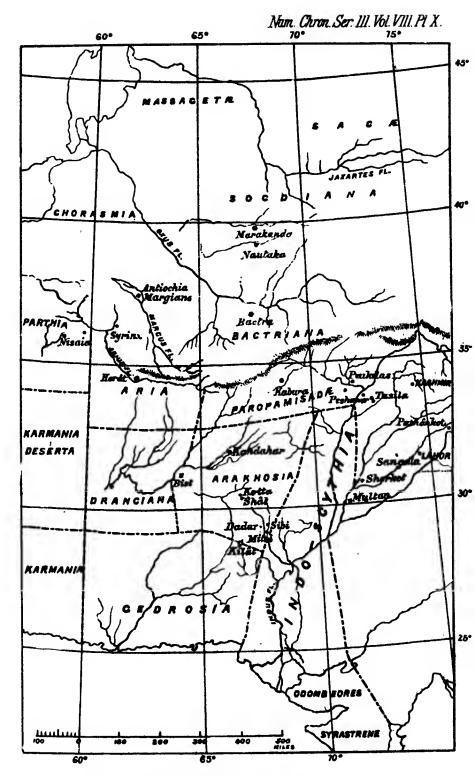

In the passage which I have quoted from the Mojmal ut Tawarikh the names of four kings are given as the successive rulers of Sindh. As they are specially said to be not of Indian origin there is a strong presumption that they must have been the Soythians who conquered Sindh. Their names, as already quoted, are: 1, Kafand or Kid; 2, Ayand; 3, Rasal; and 4, the two sons of the last-named, Rowal and Barkamaris. It is curious that we possess the coins of just four princes who might possibly be identified with them were it not for the difference in the names. But it seems probable that Vonones and his relatives of the coins must have belonged to Kipin or Arachosia, while Ayand and his posterity belonged to Sindh and the Panjâb.

Remusat, Nouv. Mélanges Asiat., i. p. 207.

It is possible, however, that they may be represented by Azas and his successors, thus:—

Ayand may be Aya or Azas.
Rasal may be Ayilisha or Azilises.
The rebel might be Jihonia or Zeionises.
Rowal might be Sapaleizes.
Barkamaris might be The Nameless King.

Should Barkamaris turn out to be a corrupt rendering of Bikramadit this last identification might not be improbable, as several of the different types of the Nameless King have the single Arian letter Vi in the field. The founder of the dynasty, named Kafand, would then be identified with Moga or Moas.

### COINS OF THE

# TOCHARI, KUSHÂNS,

OH

## YUE-TI.

ΒY

MAJOR-GENERAL SIR A. CUNNINGHAM, R.E., K.C.I.E., C.S.I.

REPRINTED FROM THE NUMISMATIC CHRONICLE, Vol. 1X., Third Series, Pages 268-311.

LONDON:

1889.

•

### COINS OF THE TOCHARI, KUSHÂNS, OR YUE-TI.

According to Strabo the principal tribes of the Scythian conquerors of Bactriana were the Asii, the Pasiani, the Tochari, and the Sakarauli. In the brief notices of Trogus, the Asiani and the Sarancæ are named as the conquering tribes. The first tribe, the Asiani or Pasiani of Strabo, is said to have given kings to the Tochari, and to have afterwards subdued the Sarduchæ. In the first passage we may perhaps read Saraucæ, and in the second Sarauchæ, both of which might be identified with the Sakarauli or Sagaraukæ of Strabo.

As the dates of Trogus and Strabo are limited to the period between B.C. 40 and A.D. 14, the Scythian occupation of Bactriana must be assigned to the second century B.C., while the union of the five tribes and the consequent aggrandisement of the Yue-chi (or Yue-ti) under the single rule of the Asiani (or Kushâns), cannot have taken place until near the close of the first century B.C.

We derive some further information about the Scythian conquest of the provinces on the Oxus from a few brief

<sup>&</sup>lt;sup>1</sup> Geogr., xi. 8, 2.

<sup>&</sup>lt;sup>2</sup> Prolog. Trogi, xli.—"Scythicæ gentes Sarancæ et Asiani Bactra occupavere et Sogdianos." Prolog., xlii.—"Additæ res Scythicæ reges Thocarorum Asiani, interitusque Sarducharum."

notices of other Chinese writers. According to them the Great *Yue-ti* on being driven across the Jaxartes by the Hiong-nu, occupied Sogdiana in B.C. 163, at which time the king of the Yue-ti was killed, and his skull made into a drinking-cup, that was still in use one hundred and fifty years later.<sup>3</sup> The Yue-ti, under their widowcd queen, gradually extended their dominions until they reached the south side of the Oxus, where they were found in full possession by the Chinese general Chang-Kian in B.C. 116. But their wars with the Hiong-nu were known in China before B.C. 126, when Chang-Kian's embassy was dispatched. This date is confirmed by the deaths of two Parthian kings in battle with the Scythians and Thogarii—the first, Phraates II. in B.C. 126, and the second, Artabanus in B.C. 123.

About one hundred years later, or say about 16 B.C., the chief of the Kushâns, having conquered the other four tribes of the Yue-ti, assumed the title of King of the Kushâns, and advancing to the south occupied Kao-fu, or Kabul. The name of this king was Kieu-tsieu-khio. He must therefore be the Kujula Kadphises of the coins, on which he takes the title of king of the Korsan, or the Kushâns, as written in the native legends of his coins At first he would appear to have reigned jointly with the Greek king Hermæus, as both of their names are found together on one very numerous series of copper-coins of the Kabul valley.

Kieu-tsieu-khio is said to have reached eighty-four years of age, and the great abundance of his coins bears ample testimony to a very long reign. He probably reigned for

<sup>&</sup>lt;sup>3</sup> Remusat, Nour. Mélanges Asiat., i. 205.

<sup>4</sup> Julien's translation in Les Huns Blancs, p. 43.

about forty-five or fifty years, or from B.C. 16 to A.D. 35. The consolidation of the five tribes of the Yue-chi under Kujula Kadphises has been generally accepted as dating from about one hundred years after Chang-Kian's embassy, which appears to have occupied about ten years, or from B.C. 126 to 116. But M. Specht, the last translator of the Chinese accounts, fixes the date at A.D. 25.3 But against this late date I can offer the very strong objection that in the year B.C. 2, the king of the "Great Yue-ti" is said to have sent a mission to China under I-tsun-kiu (? Asanga) with a Buddhist book. 6 Now this king must certainly have been Kujula, who calls himself on his coins Sacha-dharma-thida, or "upholder of the true dharma." He must therefore have been a patron of Buddhism, and as he was the founder of the Kushan empire, and the immediate successor of the Greek Hermæus, he must have been the king of the Yue-ti who sent the Buddhist book to the Emperor of China in B.C. 2. His subjugation of the other four tribes of the Yue-ti, and consequent aggrandisement of the Kushan power, cannot therefore be placed later than about 10 B.C. I take his actual name to have been Kujula, or in Greek KOZOYAO and KOZOAA, while Kadaphes or Kadphizes was only a title, which I believe to mean simply the "good charioteer," as I find that Kieu-teu-fu is so translated by D'Herbelot.7

Kujula was succeeded by his son Yen-kao-ching, or Yun-kao-chin-tai, who is recorded to have conquered India, where he established his generals as governors of provinces.

<sup>&</sup>lt;sup>3</sup> Indian Antiquary, xv. p. 19.

<sup>&</sup>lt;sup>6</sup> Pauthier, in Thian-chu, p. 14.

Bibliotheme (nientale, 8vo, iv. 62

I would identify this king with Wema, or Hema Kadphises of the coins, who certainly reigned over the whole of the Punjâb and North-West India, as proved by the numerous find spots of his coins. As Yun or Yen is only an interchangeable pronunciation with Wen or Hen, I take this king's name to have been simply Wen, while Kadphises was his title, as in the case of his predecessor. In corroboration of this view I can point to the unique gold coin of this prince on which he is represented driving in a chariot.

Now this same name of Wen was that of the famous progenitor of no less than ten branches of the Yue-ti, who after a lapse of six centuries claimed an uninterrupted descent from the Shaowu Wen. This was in A.D. 610; but only twenty years later, or in A.D. 630, Hwen Theong found that no less than twenty-seven chiefs of the Tu-ho-lo or Tochari, called themselves kings, while they were all tributary to the great Khan of the Turks. On the coins the name of this king is written OOHMO in Greek, and Hima in native characters. The Greek seems to represent Wemo. One or two of the coins have Hema in native characters; but the common form is Hima. As his coins are extremely common he must have had a long reign, say of forty years, from about 35 to 75 A.D.

After him the Chinese mention king Kin-ni-se-kia, or Kanishka, of whom we possess several inscriptions as well as numerous coins, both in gold and copper. The name

<sup>&</sup>lt;sup>6</sup> Brit. Mus. Cat. Greek and Scythic Kings, Pl. XXXII., fig. 13.

Beal's Hiven Thiang, i. 87.

<sup>10</sup> The name of India is written Hian-then as well as Yin-tu.

of Kanishka is famous in Buddhist history as a convert to Buddhism, and a great patron of Buddhist teachers. A single gold coin presents the name of BOAAO, with a figure of Buddha standing in a posture well known to us from numerous statues. There are also about a dozen copper coins, which bear both standing and sitting figures of the teacher. In his inscriptions Kanishka calls himself king of the Kushans, or Gushans, and in the Raja Tarangini he is said to have been a Turuskka.

No other certain names are mentioned by the Chinese writers. But in some of the early Muhammadan authors I find the names of Båsdeo, Ujen, and Jasand, as successors of Kanak or Kanishka.<sup>12</sup> But according to Binakiti Ujen was the predecessor of Kanak. By reading Wahen, instead of inste

During the year 94 A.D., there is a notice by the Chinese that a king of the Yue-ti was taken prisoner and put to death by the Chinese. As the Chinese record every present as "tribute," I think we may safely read "frontier chief" instead of "king," as at this very time Kanishka held hostages from the tributary Chinese Princes to the west of the Yellow River. 14

During the period A.D. 220-280 the Yue-ti are said to

<sup>11</sup> Roja Tarangini, B. I., verse 170.

have held Kipin or Arachosia, Ta-hia or Bactria, Kaofu or Kabul, and Thien-chu or India. Their capital was Lukien-shi, or simply Kien-shi or Lan-shi. Ptolemy places the Tochari below the Zariaspæ. But the Tochari, or Tusharas, or Tukharas, or Tu-ho-lo, then held Balkh, and were the same as the Zariaspæ. Ammianus Marcellinus makes the Tochari subject to the Bactrians,15 by a similar mistake. At a later date, about A.D. 425 or 430, the warlike king of the Yue-ti, named Ki-to-lo, conquered Kabul and Kan-to-io, or Gandhara, and five districts to the north of Gandhâra.16 While absent on this expedition the White Huns appeared on the banks of the Oxus, and he was obliged to return for the defence of his own territory; but, before leaving he installed his son in Purushapura, as King of Gandhâra, and thus established a separate dominion known to the Chinese as the kingdom of the "Little Yue-ti," or Little Kushans.

As the White Huns managed to establish themselves to the north of the Oxus and also in Gorgo or Gurgân, the ancient Hyrkania, the power of the Kushâns was much weakened, and their dominions became limited to Balkh and Kabul. In the beginning of the sixth century the King of Kipin was at war with the King of the White Huns who held Peshawar.

Of Kujula Kadphises and Wema Kadphises the only remains are their coins, and the brief notices of the Chinese annalists. But of Kanishka and his two successors Huvishka and Vâsu Deva, we possess several inscriptions, most of which are dated, the dates ranging from the

<sup>15</sup> Am. Marcell., xxiii. 6-27.

<sup>16</sup> Julien, in Les Huns Blancs, p. 44.

year 7 to 98 of some era. Several years ago I made the following remarks on this subject.<sup>17</sup>

"In the Indo-Scytbian inscriptions the names of four different Macedonian months have been found-namely, Panemos, Daisios, Apellaios, and Artemisios. The use of these names shows incontestably that the Macedonian calendar must have been introduced in Kabul and North-West India by the Bactrian Greeks, and as the province to the west of the Indus had belonged to Seleukus I conclude that the era of the Seleukidæ must have been adopted there also. Unfortunately the year dates hitherto discovered are all small numbers, which might refer to some recently established date of the Indo-Scythians; or, as suggested by Mr. Thomas, they may possibly refer to the Seleukidan era by leaving out the hundreds, which was the common Indian mode of reckoning the Saptarshi Kál. With the Indo-Scythian inscriptions, for instance, the dates of 9, 11, 18, and 28 of Kanishka, and of 33, 39, 47, and 51 of Huvishka, might either be referred to a new era, such as the Saka Kâl of 78 A.D., or to the years 9. 11. 18, &c., of the fifth Seleukidan century, by leaving out In the former case the year 7 of Kanishka would be 78 + 7 = 85 A.D., while in the latter case it would be referred to the year 407 of the Seleukidan era, equal to A.D. 95-96."

As these dates are found along with the names of four Macedonian months, I feel that they should naturally be referred to the Seleukidan era. Under this view the following will be the dates of the Indo-Scythian Princes Kanishka, Huvishka, and Vâsu Deva:—

<sup>17</sup> See my Book of Indian Eras, p. 41.

```
A. Sel.

Inscription, Kanishka

7 = 407 - 812 = 95 and 96 a.d.

28 = 428 - 812 = 116 and 117 a.d.

Huvishka

88 = 483 - 812 = 121 and 122 a.d.

51 = 451 - 812 = 189 and 140 a.d.

Visn Deva

88 = 483 - 812 = 171 and 172 a.d.

98 = 408 - 812 = 186 and 187 a.d.
```

The accuracy of these dates has been confirmed by the discovery of gold coins of Wema Kadphises, Kanishka, and Huvishka, in the Ahinposh Stûpa (near Jalâlâbâd) along with some Roman gold coins of Domitian, Trajan, and Sabina the wife of Hadrian. As Sabina died in A.D. 137, and as there was only one coin of Huvishka amongst twenty-one specimens, the Stûpa was probably built not later than 130 A.D.

The approximate dates of the great Kushan Kings would therefore be as follows:—

```
B.c. 10. Kujula Kadphises.
A.D. 35. Wema Kadphises.
,, 75. Kanishka.
```

., 120. Huvishka.

,, 160. Vasu Deva, still reigning in A.D. 186.

The dates of the inscriptions would only be slightly altered to nine years earlier, by the adoption of the Saka Samvat, beginning with A.D. 79 = 1, as the era in which they are reckoned.

After Vûsu Deva we have no recorded names, but there are numerous gold coins of the seated Ardokhro type, which can only be referred to the Kushân princes who followed Vâsu Deva. They are similar to the early Gupta gold coins of Chandra Gupta and Samudra Gupta, but with the exception of a few of the earlier ones, they are much ruder in execution. The earlier specimens may date

from 200 to 400, and the later specimens from 400 to 600 or 700, A.D.

There are also numerous silver coins of the Sassanian period, which must belong to Vasu Deva's successors, besides numerous copper coins, which appear to be mere copies of the gold coins. Some of them are, indeed, ancient forgeries of the gold coins, with the gilding still clinging to the deeper parts.

At last, about A.D. 450, we find the first coins of the Little Yue-ti, with the name of their leader recorded on them, as Kidara Kushana Shahi. These Little Yue-ti reigned over Gandhara, and probably also over Kashmir, as I would attribute all the coins that bear the name of Kiddra to their descendants. The name was not dropped for many generations.

During this expedition of Kitolo, or Kidiwa, the Ye-thai-li-to, or Ephthalites, invaded the territories on the Oxus, and Kitolo was obliged to hasten back to defend his own dominions. The Kushans were driven to the westward, and from this time, about A.D. 470, the supreme power fell into the hands of the Ephthalites. But the mass of the population was still Kushan, and so late as A.D. 610, as I have already noted, no less than ten princes in Farghana, Sogdiana, Naksheb, and other places to the north, claimed an unbroken descent from the Shaowe Wen, or King Wema Kadphises, the Kushan conqueror of India. I find a corroboration of this curious fact in the embassy of Maniach, Prince of the Sogdoites to Justin in A.D. 569. His name, ending with a guttural, proclaims him a Kushan, and the letters in the Scythian character, which he brought with him, show that he was certainly not an Ephthalite. He was, therefore, as stated by the Chinese, a Kushan prince or Shaowu, a descendant of Wen.

Ibn Khurdâdbeh speaks of a Kushân Prince of Mâwarunnahr in the ninth century; and several Kushân chiefs are mentioned in the reign of Timur. They were, of course, Muhammadans. 18

The statement that Yenkaoching or Wema Kadphises conquered India is confirmed by numerous finds of his coins as far eastward as Gorakhpur, and Ghazipur, and the line of railway from Allahabad to Jabalpur. In all these places several hundreds of his coins have been dug up; and much-worn specimens are also procurable in all the bazars of the Gangetic Doâb.

The coins of Kanishka and Huvishka are even more common, while the later coins of Vâsu Deva are found in thousands. They are especially common round about Mathura, which was probably the head-quarters of one of the Kushân king's satraps. But the very latest of these coins are very barbarous; and, as the copper coins of the Guptas are exceedingly scarce, I conclude that the Indo-Scythian copper money remained current in India for several centuries.

During the first century of the Christian era Roman gold was brought to India in great quantities. The fact is preserved by Pliny, who states that "at the lowest reckoning, one hundred million of sesterces were annually taken from Rome to India, the Seres, and Arabia." The whole amount was upwards of £800,000.<sup>19</sup> In another

<sup>18</sup> Price, Muhammadan History, iii. 101.

<sup>19</sup> Nat. Hist. xii. 41, 18. "Minimaque computatione millies centena millia sestertium annis omnibus India et Seres peninsulaque illa (Arabia) imperio nostro adimunt." The influx of gold into India still continues, but the yearly amount is now over two millions sterling. For eighteen centuries the gold of the world has been flowing into India, from whence little or none has ever left, except with a few great plunderers.

place Pliny assigns half that sum, "quingenties H.S." for India, exclusive of Arabia. In southern India the Roman gold remained current, and is still found there in large quantities. In northern India it was recoined by the Kushan Indo-Scythians, although many specimens have been preserved in Buddhist stûpas even down to our times. In 1858 I made a record of the weights of all these Indo-Scythian gold coins within my reach, and on comparing their weights with those of the Roman gold coins, I then came to the conclusion that they might have been re-struck on Roman aurei of the first century. I refer specially to the gold coins of Wema Kadphises and Kanishka, which agree in weight with the early Imperial aurei of Tiberius and Nero.

Roman gold coins are still discovered in the Buddhist monuments of the Kabul Valley, from the time of Augustus down to the fifth century. I have had gold coins of Leo, Justin, and Anastasius sent to me several times, and twice I have obtained coins of Focas. Gold coins of Theodosius, Marcian, and Leo, were found by Masson in a stûpa, near Jalâlâbâd, on the Kabul River.

The rule of the Great Yue-ti, or Kushans, would appear to have remained undisturbed until the invasion of the Nephthalites, or White Huns, in the fifth century. But there are notices of relations, both warlike and peaceful, with some of the earlier Sassanian kings, which must certainly refer to the Kushans. The warlike Prince Vararanes II., having conquered the Segestanis, or Sakas of Sakastene, in A.D. 280, was still detained on his eastern frontier in A.D. 283, when the Roman Emperor Carus invaded Persia. As peace had been made with the Segestanis, the detention would have been caused by the unsettled state of the north-east frontier of Kubul, which was then held by the

Kushans. On the death of Vararanes the throne was disputed between the brothers Narses and Hormisdas when the latter was assisted by the Sacci (Sakas of Segestan), and by the Gelli, who must be the same as the Gelani of a little later date. Between A.D. 301 and 309 Hormisdas II., the son of Narses, married the daughter of the king of Kabul. That the latter was a Kushan prince we learn from a gold coin of Hormisdas, which bears the well-known type of the Kushan coins of the god Okro, with his bull.

During the following reign of Sapor II. the relations of the Sassanian king with the princes on his eastern frontier, would appear to have been friendly for a long time. In A.D. 350 Sapor was obliged to raise the siege of Nisibis, owing to a sudden irruption of the Massagetæ-that is, of the Sakas of Sakestene or Segestan. When this disturbance was settled we find Sapor bringing to the siege of Amida, in A.D. 359, a strong contingent of the warlike Segestani, along with the forces of the Chionitæ and the Albani, commanded by their respective kings in person. Grumbates was the king of the Chionita, and his eldest son was killed at the siege. I would identify the Chronitæ with the Kushans, as I take the name to be only a Greek translation of Tushara or Tukbara, the Tu-ho-lo of the Chinese, and the Tokharoi of the classical writers-meaning "men of the snowy land." The Gelli or Gelani may perhaps be the same as the Albani, but I cannot even guess at their identification.

# LITTLE YUE-TI, OR LESSER KUSHÂNS.

The kingdom of the Little Yue-chi, or Yue-ti, was established by Ki-to-lo, king of the Kushans, or Great

Yue-chi, about A.D. 425. The Chinese syllables of the king's name may be read as *Kidâra*. Now I possess three large thin silver coins of Sassanian types, each bearing, in neat Indian characters, the legend—

## Kidara Kushana Sha(hi),

or "Kidâra, king of the Kushâns." This same name of Kidâra is found also upon a great number of coins in gold and copper in the north-western Punjâb, and in Kashmir I infer, therefore, that the descendants of Kitolo, dr Kidâra, must have remained in possession of some territory on both banks of the Indus for several centuries. None of these coins have been found at Kabul, and only two were discovered by Masson, in a stûpa, near Jalâ-lâbâd.

I have placed the establishment of the Little Yue-ti about A.D. 425, partly because the Indian inscriptions on their coins appear to me to be not earlier than the fifth century A.D., and partly because the silver coins of Kiddra himself seem to be of the same age as those of Vararan V., who reigned from A.D. 420 to 440. Kitolo's conquest of Gandhâra must have preceded the irruption of the White Huns, who established themselves at Peshawar two full generations before the visit of Sungyun in A.D. 520—or say, about 470 A.D. The pilgrim calls the reigning king a Ye-tha—that is, an Ephthalite, or "White Hun." The full Chinese name is Ye-tha-i-ti-to, which was contracted to Ye-tha, just as Fo-tho, for Buddha, was shortened to Fo.

During the occupation of Gandhara by the White Huns, I suppose that the Little Yue-ti, the descendants of Kitolo or Kidara, may have retired to Taxila and Mansera. I think it probable, therefore, that they are

now represented by the Gakkars, who still hold portions of these districts to the east of the Indus. I base my supposition on the fact that the Gakkars claim descent from a hero named Kėd, a stranger from the Oxus, and that his descendants reigned in Kashmir for sixteen generations. These traditions accord very well with the Chinese story of the conquest of Gandhâra, by the Kushân king, Kitolo or Kidara, from the Oxus, as well as with the actual record of the name of Kidara on the coins of Kashmir for about four centuries.

The name of Kitolo is preserved by the Muhammadan historians under the form of Kitormán, which was the name of the Turki kings of Kabul, whose rule lasted down to the time of the Brahman Kallow, about A.D. 850. Alberuni says that Kanak was the last of the Kitormán kings, and Binâkiti says the same. Their kings also continued to use the title of Shâhi, which has been handed down from the time of the Great Kanishka, so that their dominion was known as the Shâhi-râjya. But both name and title still subsist, as the chiefs of Chitrâl, Gilgit, and Chilás still hold the title of Shâh-kitor.

In fixing the date of Kitolo at about A.D. 425, I have been guided by the fact that he was obliged to return to his own country (Balkh) by an inroad of the White Huns (Juan-juan). Now the White Huns did not become powerful until the time of Solien Khan (A.D. 428—443). He himself was at war with Bahram Gor, the Sassanian. But his son, Chu-khân, the Konkhas of Priscus (A.D. 443—464) was a strong ruler, who assisted Firoz against Hormisdas, and to him I. would ascribe the invasion of Kitolo's dominion. It was during his stay with the camp of Attila in A.D. 446—47, that Priscus heard of the 'Ouvvot Küapírat, or Ephthelite Huns; and I would, therefore,

ascribe the return of *Kitolo* to the time of *Konkhas* or *Chu-Khân*, or about A.D. 450. Kitolo then established his son in Gandhâra, and retired to his own country.

The Chinese mention that the Little Yue-ti had coins both of gold and silver, but they say nothing as to their types. To these successors of Kitolo I would ascribe most, if not all, of the gold coins that bear the name of Kiddra under the king's arm. The Kashmir coins of Toramâna, and his son Pravarasena, bear the same name, which I take to denote some family connection with the Kitolo kings of the Gandhara. We know from the Raja Tarangini that Meghavahana, the grandfather of Toramana, had received shelter at the court of Gopaditya, king of Gandhara. But there are no coins bearing this name. Unfortunately, the early history of Kashmir, which ought to have assisted us, is a confused jumble of names, of which only a few can be found on the coins. These are Hiranyakula and Mihirakula, with perhaps Gokarna, and after them, Narendraditya and Khingkila. Of the six kings of a new dynasty, not a single name agrees with the coins, and only two names of the next dynasty, Toramâna, and his son Pravarasena, are found amongst the coins. But of the succeeding dynasty of the Naga kings, established by Durlabha Vardhana, several names agree; and, as their coins still bear the name of Kidara under the king's arm, I look upon these kings as the last descendants of the Kushans in Kashmir, who reigned until A.D. 855.

But the main body of the Little Yue-ti, or Lesser Kushâns, continued to hold the Kabul Valley until they were gradually driven eastward by the Muhammadans. The title of Shâh Kitor, which is still held by the chiefs of Chitral and Gilgit, seems to me to establish this late

occupation of the Upper Kabul Valley by the Lesser Kushâns. The continued occupation by the Turki successors of Kanishka for sixty generations (? reigns) is vouched for by Alberini, who calls Mahmud's opponents, "Hindu Shâhi kings."

In A.D. 630, when Hwen Thsang visited Gandhara, there was no king, and the country had become a dependency of Kapisa. I infer, therefore, that the Ephthalite king of Peshawar must have retired to Kabul or to Sindh, and that the Little Kushans still held Taxila as a dependency of Kashmir. Here they would seem to have remained, while they gradually acquired possession of all the hill country between Kashmir and the Indus. found my conclusion for this statement on the fact that most, if not all, of the gold and copper coins of this period which are found to the east of the Indus bear the royal title of Shahi in addition to the tribal name of Kidara. The country itself is called Shahi-rajya, or the "Kingdom of the Shahis," in the Raja Tarangini, while the great city of Taxila is still called Shah-dheri and Dheri-Shahan, or "the city of the Shahis."

The principal occupants of this territory at the present day are the Gakkars, whom I take to be the actual descendants of the Little Yue-ti, or Lesser Kushâns. To establish this last position it is necessary to notice what the Gakkars say of themselves. They profess to have come from Tarân, or the country of Afrâsiyâb, under a leader named Kid, or Kaid, several centuries before the Muhammadan invasion. If they are the descendants of the Little Yue-ti, then this leader Kid, or Kaid, must be the Kitolo of the Chinese, and the Kidara of the coins. The earliest notice of them under their

present name is due to the Muhammedans. During the campaigns of Muhammad Ghori, they were already established in their present territories. But two centuries earlier I find mention of a nameless people, who held the passes leading into Kashmir. Their chief, named Sābli, son of Shāhi, son of Bamhi, submitted to Mahmud, and offered his services as a guide. As not one of these names is Indian, the chief could not have been a Hindu; and as the name or title of Shāhi occurs amongst them, there can be little doubt that he and his people were Gakkars.

The Gakkars claim to have held Kashmir for sixteen generations; and if I am right in identifying them with the Little Yue-ti, or Lesser Kushans, I think that their claim may have some foundation, as the coins of Toramana and Pravarasena actually bear the name of Kidara. It seems, therefore, not improbable that the princes of this family, covering seven generations, must have been very intimately connected with the Little Yue-ti. At a later date it is quite certain that the rulers of Kashmir belonged to the family of the Shahi kings of Taxila, or from the time of Didda Rani in A.D. 1000. down to the Muhammadan conquest.

The name of Gakkar is said to have been derived from Gakkar Shah, one of their kings, some centuries later than Kaid. Their original name is unknown.

Albiruni, in speaking of the Turki kings of Kabul, calls the founder of the family Barhatakin, or Barhtigin, whom I believe to be simply the fabulous dun-wolf Burtezena, the legendary progenitor of the Turki races. He mentions

<sup>20</sup> Elliot's Muhammadan Historians, Utbi, ii. 48.

Kanak as the "last of the Kitorman kings." 21 This would seem to imply that the Kitor kings had possessed Kabul; and this, indeed, seems very likely, as the reigning Prince of Kipin, in A.D. 520, was then at war with the Ephthalites In another place Albiruni mentions that of Peshawar. a genealogy of this family on a roll of silk containing sixty names was found in the fort of Nagarkot (Kangra). But while the Kitor kings were reigning at Peshawar the kings of Kabul could not have possessed Kangra. Or it may be that as the Kitor princes were the descendants of Kitolo, the king of the Great Yue-ti, or Kushans, they may have reckoned their genealogy from the first Kushan king of Kabul. In this way the Kitorman kings might have reached sixty generations (or ? reigns) from 10 B.C. to 1030 A.D. or 1040 years, at an average of 173 years per reign.

In a.D. 6:30, when Hwen Thsang was in Gandhara, there was no king, the province having become a dependency of Kapisa. This may have happened by the extinction of the White Huns on the conquest of Gandhara by the Kushan king of Kabul.

I think there is good reason for suspecting that the line of the Kitor kings did not end with Kanak. Albiruni mentions the names of eight kings as his successors, as follows:—

A.D

<sup>825,</sup> Kanak, the last Kitorman.

<sup>1. 850,</sup> Kalar, a Brahman.

<sup>2. 860,</sup> Samanda, ,

<sup>&</sup>lt;sup>21</sup> Reinaud, Fragments, Arabes et Persans, p. 149. Gibbon, Derline and Fall, c. 42. Elliot's Muhammedan Historians, ii. 13.

A.D.

3. 900, Kamalüa, a Brahman.

4. 940, Bhima,

5. 950, Jayapála (? a Kitor prince restored)

6. 1002, Anandapala ,, ,,

7. 1021, Trilochanpala ,, ,,

8. 1026, Bhimapála II. ", ",

Of the first four of these kings we have silver coins; but there is not a single coin of any one of the last four. Kamalüa was a contemporary of Amru bin Lais, 878 to 900 A.D. Javapâla fought with Subuktagin, and Anandapala fought with Mahmud of Ghazni. As before stated, there are no coins of the last four princes, all of whom bear the name of Pâla, and the first is said to have been the son of Hispal. These four kings, therefore, would seem to have no family connection with the first four. suspect that they belong to the old Kitorman dynasty, as Anandapâl is called Shâh by Albiruni,22 and Trilochan-pâl is called Shâhi in the Raja Tarangini. As they were not Muhammadans there was no reason for giving them this title; but as Trilochanpâl is called Shâhi and not Shah, I think it is almost certain that these last four princes must have belonged to the old Kitorman family.

I may note here that *Trilochan-pál* is the prince whom all the Persian and Arabic writers persist in calling *Nar-dajan* and *Fardajan-pâl.*<sup>23</sup> As there are no coins of these last four princes I conclude that the very extensive mintage of Samanta Deva was found sufficient for the wants of the country.

<sup>22</sup> Sachau Albiruni, ii. 18

<sup>&</sup>lt;sup>23</sup> I made this correction as early as 1842 in my account of the Ancient Coinage of Kashmir.

### EPHTHALITES, OR WHITE HUNS.

The Ephthalites, or White Huns, make their first appearance in history early in the fifth century. To the industry of D'Herbelot and De Guignes we owe the collection of the various notices of Chinese authors: but our chief debt is due to Vivien de St. Martin, who, in his Les Huns Blancs, has added all the scattered accounts to be found in Armenian and classical writers. By the Chinese they were usually called Juan-juan, or Jen-jen, which is said to have a derogatory meaning in their language. Their true name of Ephthalites was very closely rendered by the syllables Ye-tha-i-li-to; but as the Chinese frequently abbreviated proper names, as Fo for Fo-tho, or Buddha, so the name of the Ephthalites was lost sight of in the contracted forms of Ve-tha and Vi-ta, which are applied to other peoples.

The earliest western notice of the White Huns is by Moses of Khorene, who mentions the Hephthag as one of the barbarous peoples of Scythia in the first half of the fifth century. The next notice is by the historian Priscus, who was the ambassador of Theodosius II. with Attila, in the years A.D. 445 to 447. He calls them Οῦννοι Κααρίται, which appears to me to be only another name for Ephthalites, as Hidalitæ or Hidaritē. In A.D. 530 they are described by Kosmas Indicopleustes as Λευκοι Οῦννοι, or "White Huns," and only a few years later, in A.D. 540, Procopius calls them by the same name as Ἐφθαλίτων ἔθνος, with the addition of λευκους, or white. In the following century Theophanes calls the White Huns Νεφθαλίτας. Several other various spellings of the name are given by Vivien de St. Martin, as Idalagān by Lazarus of Parba,

Abdela by Theophylact, Thedal by the Armenians, and Haiathelah by Firdausi and in the Mojmal ut tawarikh, as well as by the Sassanians.

According to Procopius the White Huns held the country to the north of the Persian dominions, with Gorgo as their capital, which St. Martin has identified with Gurgán, the chief city of ancient Hyrkania. According to Kosmas they occupied the country along the western bank of the Indus, to which he gave the name of Oūvvia, or Unnia, and not Hunnia.

From their occupation of the countries on the Oxus and the Indus, the White Huns soon came into conflict with the Persians on the west and the Indians on the east, and our knowledge of their history is chiefly due to their wars with their neighbours.

According to the Chinese, the first noted leader of the Jen-jen was Shelun, who reigned from A.D. 385 to 410. He dropped the native title of tsanyn for that of Khakan, which was adopted by all his successors. He was followed by three princes, of whom the last, named Tâtân, must be the Khákân who fell in battle with Bahram Gor, or Vararan V., at Darband, on the Oxus, in A.D. 428. Tâtân was succeeded by his son Solien Khan, A.D. 428-443, who received a Chinese princess in marriage. Next came Chukhan, 443-464, who was driven across the Oxus by Isdegard II. But afterwards, with his aid the Sassanian Firoz (Perozes), in 459, defeated his brother Hormisdas, and became King of Persia. Priscus calls this Ephthalite king Kouyas, which I take to be the same as the Chinese Chu-khan. His successor was Shu-lo-pu-chin, the Khush-Navûz of Sassanian history. Feroz gave his sister in marriage to the Khâkân, but his feeling of dependence so rankled in his mind that he shortly afterwards invaded

the Khâkân's dominions, and was killed in battle. An ambassador from the Byzantine Emperor Zeno accompanied Feroz in this unfortunate invasion, which Gibbon, on the authority of Procopius, assigns to the year A.D. 488. But the eastern writers refer the death of Khushnawâz to 481—485. Three other princes followed, but the power of the White Huns was then declining, and no further relations with the Persian kings are recorded. The last prince, Onowei, was defeated in battle by Tu-men, the king of the Turks, who put him to death in A.D. 546. "Thus," says Gibbon, "ended the empire of the Nephthalites, or White Huns, a polite and warlike people, who had vanquished the Persian monarch, and carried their victorious arms along the banks, and perhaps to the mouth of the Indus." (Decline and Fall, c. 42).

The name of Hūna was well known to the Indians as a people on the north-west frontier. The Hūnas are not mentioned in the posthumous inscription of Samudra Gupta on the Allahabad Pillar. But as this record cannot be placed later than A.D. 380, the silence of Indian evidence is in full accord with both the Chinese and the Persian accounts, which place their first appearance in the next century. Our earliest notice of the White Huns on the Indus is due to the Chinese pilgrim, Sung-yun, who in A.D. 520 visited Gandhāra. He says that it was originally called Ye-po-lo (Embolina?), and adds, "this is the country that the Yethas (White Huns) destroyed, and afterwards set up Laelih to be king, since which events two generations have passed." The king was not a Buddhist, and he had been three years at war with Kipin.

If we place the reigning king's accession in A.D. 510, then the accession of Laelih may be placed two generations or about fifty years earlier, or in A.D. 460-470.

The king kept 700 war elephants. This agrees with the account which Kosmas, A.D. 530, gives of King Gollas, who kept 1,000 elephants.

There is a strong temptation to identify this King Gollas with the great Mihir-gul, whose title of Shahi proclaims him to have been a Scythian. Mr. Fleet's Mandasor Inscription of A.D. 532 mentions Mihirakula as a powerful prince, who had paid homage to the reigning king of Malwa Yasodharma. It also notes that this king possessed countries which neither the Guptas nor the Hunas could subdue. From my Gwalior inscription we learn that Mihirakula's father was Toramana, and very lately an important inscription of this Toramana has been found in the Salt Range of the western Panjab. neither Mihir-gul nor Toramana is a Hindu name, it would seem that both princes must have been Scythians. there is nothing to show that they were Hûnas, except the fact that at this period the northern Panjab was under the rule of the Hûnas. If we might identify Mihir-gul with Gollas, then Toramana would be the father of the king who was reigning at Sung-yun's visit, and Laelih would be the father of Toramana. The Western coins give the name of Mihir-gul with the title of Shahi. Eastern coins give Mihir-kul without the title.

As the date of the settlement of the White Huns in Gandhâra, and along the west bank of the Indus, corresponds with the period during which the province of Sindh, on the Lower Indus, was held by a Scythian dynasty who bore the title of Shâhi, it seems probable that the Ephthalites, as suggested by Gibbon, may have extended their conquests to the mouths of the Indus. The period of Scythian rule in Sindh lasted for 137 years, from a.D. 505 to 642. The original settlement corresponds

not only with the date of Gollas on the Indus, but also with the well-ascertained period of the wide rule of Toramâna and his son Mihir Kul. The father succeeded Budha Gupta in Malwa shortly after 174 of the Gupta era, 318+175=493 A.D., while the son had already done homage to Yasodharma before A.D. 532. The great extension of the power of the White Huns may therefore be assigned to the most flourishing period of Ephthalite dominion under Khush-Nauaz, conqueror of Feroz of Persia, and under his son Fukushun, who together reigned from A.D. 464 to 508. Their rule probably lasted in the Panjab until the close of the sixth century, as the Hara Hûnas are mentioned by Varâha Mihir as a people of the North-west as late as A.D. 550. The "Western Hûnas" are also mentioned in the Aphsar inscription as the antagonists of Dâmodara Gupta, about A.D. 560-580. they had disappeared as a ruling race before A.D. 530, when Hwen Thsang visited Gandhara, as that country was then subject to the rule of Kapisa, while Taxila belonged to Kashmir.

Regarding the extension of the Ephthalite rule to Segestan I feel very sceptical. The early Muhammadan writers, who must have received all their information from the Persians, naturally described all Scythian races by the one name of Ratbil or Rantil, Zanbil or Zantil, Ratil or Abtil, &c., corrupted in a dozen different spellings. Amongst these various readings I recognise the name of the Ephthalite antagonists of the Persians. Theophylact, in the seventh century, calls them Abdela, and as this is the nearest form to the original Ephthalite, I conclude that the various names given to the rulers of Sejistan, Kabul, and Sindh, are simple corruptions of the one name.

The following notices of these conquerors are taken

from Elliot's Muhammadan Historians of India, vol. ii., pp. 417-420:-

In A.H. 22, or A.D. 648, Sejistan was taken, and shortly afterwards Mekran and Sindh were conquered by the Muhammadans, when the king, named Ranbil, was killed.

In A.H. 78, or A.D. 697-98, Abdul Aziz, Governor of Sistan,

invaded Kabul, when the king, named Zambil, was killed.

In A.D. 775—809, the Khalifs Al Mahdi and Ar Rashid took tribute from Ranhil, king of Sistan.

In A.D. 813—893, the Khalif Al Mamûu took Kûbul, when

the king submitted and professed Islam.

In A.D. 869-70, Yakub bin Lais took Kabul from Ranbil,

who appears to have been killed.

In A.D. 878—900, Kamlu was reigning at Kabul, and was contemporary with Amru bin Lais.

But only a few years previously, in A.H. 260—61, or A.D. 873—75, coins were struck at Panjshir, in Kâbul, by Yâkub bin Lais.

With respect to the kings of Kåbul, there can be no doubt that they were not Ephthalites, as Biruni specially mentions that the rulers previous to Kamlu and his two predecessors were Turks of the family of Kanishka, which had ruled for sixty generations up to the time of Mahmud of Ghazni.

As the White Huns were a barbarous nomad race, who were ignorant of writing, it seems probable that they may have had no coins. The pilgrim Sung-yun, who visited Gandhâra in A.D. 520, had seen the Yetha in their own country on the Oxus. He found them simple nomads, who practised polyandry and had no written characters. But when they were settled in Gandhâra amongst a civilised Indian population, it seems very probable that they would have struck coins in their own names, as the previous rulers had done. As they had no written characters of their own, they would of course have adopted the

Indian characters; and I am, therefore, very strongly inclined to assign the coins of Mihir-gul to the Ephthalite Huns of the Indus. I adopt this opinion the more readily as we learn from Sung-yun that the reigning king of Gandhâra in A.D. 520 was not a Buddhist; which agrees with the strongly pronounced Brahmanism of the coins of Mihir-gul, which display the trisul, or trident, as well as the standard of Siva with the humped bull, and the inscription, jayatu Vrishi dhaaja, "May he whose symbol is the bull (Siva) be victorious." I am inclined, therefore, to assign all the coins of this class with Brahmanical symbols, such as the conch shell of Vishnu, and the trident and humped bull of Siva, to the White Huns of the Indus.

The silence of Hwen Thsang, who twice passed through the old country of the White Huns, between A.D. 629 and 642, is a striking proof of the complete decay of their power in his time. I believe, however, that the pilgrim has actually mentioned them without recognising their I refer to Hi-mo-ta-lo on the Oxus, of which Hwen Thsang gives a translation as "under the snowy mountains." But as this meaning would give a purely Indian origin to the name as Hima-tala, it may be dismissed at once. I believe that the Chinese syllables simply represent the name of the Ephthalites under a slightly different form as Hematala, which approaches the Haiathela of Firdausi. That his Himatala is the Yetha of Sungvun is proved by a curious custom which is mentioned by both pilgrims—that the married women wore a born three feet long on their head-dress. As this peculiar custom is not noticed regarding any other people, I conclude with some confidence that both Yetha and Himatala are only two variant forms of the same name.

#### II .- Notes on the Coins.

On examining the coins of the Indo-Scythians, I observe that there are several marked differences in the money of the two great races, the Sakas and the Kusbâns. The Saka coins show a decided preference for the worship of the Scythian Herakles, and offer no traces of the Persian and Indian worship of the planets and elements. The Kushâns, after the reign of their first king Kujula Kadphises, adopted the Sabeanism of Bactriana with a strong mixture of the worship of Indian gods, as shown by the use of several names of purely Indian origin.

Another striking difference between the coins of the two races is the total absence of monograms on the Kushân money, while the Saka coins are remarkable for the number of their monograms, both in Greek and in Arian characters. The coins of the Greek Hermæus are never without monograms, while those of his successor, the Kushân king Kujula Kadphises, are distinguished by their total absence.

A third difference between the two coinages is the entire want of gold money amongst the Sakas, and the same want of silver money amongst the Kushâns.

These three differences are so marked that I think they might be used as fair tests of the race of any of the kings whose nationality might otherwise be doubtful. Thus Miaüs, or Heraüs, who uses no monograms, should be a Kushan, and not a Saka, king.

The abundant use of gold by the Kushans may, I think, be explained by the great increase of commerce which took place between Rome and India with the establishment of the Roman Empire under Augustus. During

this period, as recorded by Pliny, about £400,000, or nearly half a million sterling, was the yearly sum paid by Rome to India.<sup>24</sup> What became of this gold? In Southern India it circulated unchanged with the square silver indigenous coins, but in Northern India, where the people were already familiar with the Greek coins of the Bactrian kings, the Roman gold was recoined by the Kushân princes, beginning with Hima Kadphises, who certainly reigned in the middle of the first century A.D. I came to this conclusion about thirty years ago by comparing the weights of more than a hundred Indo-Scythian gold coins with those of the early Roman Emperors.

With regard to the absence of silver coins amongst the Kushâns, I can only guess that the extensive coinages of silver money by the Greek kings were found sufficient for the wants of the people. But it still remains a mystery why the silver money was not recoined, as was done with the Roman gold. Perhaps as the hemidrachms of Antimachus, Antialkidas, Menander, and Apollodotus were familiar to the people, it was thought best not to disturb them, but to adjust the new gold coinage to the existing value of silver. Well-preserved specimens of these silver hemidrachms average 37 grains in weight, and the silver didrachms average 148 grains. If the new gold coin was equal in value to 10 didrachms and 40 hemidrachms its value in silver would have been 1,480 grains. amount, at 12 rates of silver for 1 gold, would make the weight of the new gold coin 123.3 grains, which is, as nearly as possible, the actual weight of the Kushan gold

<sup>&</sup>lt;sup>24</sup> Plinii Nat. Hist., xii. 41. "Minimaque computatione," he says.

coins. I have taken the weights of 179 examples, which give the following results:—

19	Dinars of	Hima Kadphises	average	122.21	grains.
21	,, '	Kanishka	11	122.19	,,
118	,,	Huvishka	,,	$122 \cdot 16$	,,
21	,,	Vasu Deva	,,	128.9	,,

The later coins of Vasu Deva, which are less worn than the others, give the full weight of 123.3 grains.

The small quarter Dinârs of these four kings also average 30.8 grains, which would give a full Dinâr of 123.2 grains.

Now if these coins had been simply copied from the Roman Denarii Aurei, they would most probably have fluctuated in weight with the Roman coinage of the first and second centuries. But, on the contrary, their full weight is maintained to the last, from the earliest coins of Wema Kadphises down to the close of Vasu Deva's reign in the end of the second century A.D.

With regard to the long-continued currency of the Greek silver coins, we have the testimony of the author of the *Periplus*, who says that up to his time (80 to 100 A.D.<sup>25</sup>) "old drachmas bearing the Greek inscriptions of Apollodotus and Menander were still current at Barygaza." As the author was a contemporary of Kanishka, his testimony is decisive as to the continued currency of the Greek coins during the reign of the Kushan kings.

The absence of gold coins amongst the Sakas may perhaps be due to the continued circulation of the old

<sup>&</sup>lt;sup>25</sup> He mentions Malikhos, king of the Nabathwans. As their kingdom was subverted by Trajan, in A.D. 105, the author of the Periplus cannot be placed later.

Persian Darics in Sakastene and Arakhosia. Some specimens are even now found there.

The coins offer very few examples of the Indo-Scythian speech, except in the names of the kings, as all the titles of the Saka kings are given in Greek with Indian translations. We know, however, that the language of the Sakas, or Massagetæ, was similar to that of the Parthians; and this similarity is well shown in the names of Vonones, Arsakes, Gondophares, Abdagases, and Pakores. We know also that they had a distinct dialect, as the Avesta is said to have been translated into seven different languages, amongst which were the dialects of Sejistan and Merv, 26 that is, of the Sakas of Salastene, and the Kushâns of Merv. The only inscription of this race is a short record of Gondophares in the Indian language.

Of the Kushân dialect we have the king's names, and the royal titles of Shaowu or Zâvu ("King"), and Raonano Rao ("King of kings"). All the Kushân inscriptions yet found are in the Indian language. A peculiarity of the Kushân language was the fondness for the ending of proper names in ka. Thus we have Kanishka, Huvishka, and Kujulaka, of the coins and inscriptions, besides Jushka of the Kashmir history. At a later period we have Maniach. A ince of the Sogdoites, and during the reign of Khusru Parvez two powerful Kushân kings are mentioned under the names of Shog and Pariog.<sup>27</sup>

With regard to the partiality of the Scythian kings for the type of Herakles, I will now offer a few remarks which I think will be sufficient to show that the Turanian

<sup>26</sup> Hyde, Religio Vet. Pers., p. 337.

<sup>27</sup> Prof. Rawlinson, Seventh Ancient Monarchy, p. 495.

races identified the Greek demigod Herakles with their own "God of the dead," named Gebeleizes and Zamolxis. Herodotus notes that the Getæ worshipped Herakles, but he does not mention his Scythian name.<sup>28</sup> There can be no doubt however, that Gebeleizes, the Scythian "God of the Dead," was the same as Sapaleizes, whose name means "Lord of the Dead," and whose figure was copied from that of the Greek Herakles

The earliest form of the name is the Babylonian Iskalla, who is also known as Ne-uru-gal, or "Lord of the great City" or "Kingdom of the Dead." In the curious legend of the "Descent of Ishtar into Hades," Iskalla is described as the god of the house where all meet, but from which none can depart; while the Queen of Hades is named Nin-ki-gal. She is therefore the same as the goddess Nana, whose image was carried off from Erech by Kudernahundi, King of Elam, in B.C. 2280.

The king's name of Ne-uru-gal is clearly the same as Nergal, who was the god of Kutha. In the Septuagint the god's name is written 'Εργελ, which points directly to 'Ορκος and Orcus, and also to Erkle and Herakles. Nergal must likewise be connected with the Sanskrit Naraka, "the abode of departed spirits," and therefore also with Erech, or Warka, "the burial city of the Babylonians." Another connection of the name with the dead is the Greek νέκρος, "a corpse," as well as the flower Νάρκισσος, or the "numbing," which was being plucked by Persephone at the very moment that she was seized by Hades, and carried off to become the Queen of the lower world.

In the Indian Vedas the ruler of the dead is called

<sup>28</sup> Herodot., iv. 94 and 59.

Yama, but he was also named Vakra, or the "cruel," which would seem to be the same name as that of the god OKPO on the Indo-Scythian coins. As King of Naraka, or Hades, OKPO is represented as holding a noose and a mace or club. On the coins he is further identified with HPAKIAO or Herakles, with the club and lion's skin. On several coins OKPO is joined with the goddess NANA, which shows that these two deities were esteemed as king and queen, being the representatives of the Babylonian Iskalla or Nergal, and his queen Nin-kigal or Nana. That OKPO was the god of the dead is shown by the noose and the mace or club, both of which are lethal instruments of the Indian god Yama. As bearer of the former he is known as Pása-páni, or "noose in hand," and as wielder of the latter he is called danda-dhara, or "mace-holder." A well-known title of Yama is Chitra, and I would suggest that the Persian name of Sitra-takhmes must have referred to Death's irresistible strength, its meaning being simply "strong as Chitra."

The name of Sapal continued in use amongst the Turanian peoples down to a very late date. Thus Dizaboulos, the great Khâkân of the Turks, who sent an embassy to Justinian, is called Shapolio by the Chinese. The Greek form of the name is due to the want of a Greek letter corresponding to sh, for which Diz was substituted. In the same way sani, or shani, the name of the planet Saturn, became Dhizán, from which form must have originated the  $\Delta opsávns$  of Hesychius.

But the name of *Iskalla* at once suggests that of the Scythian eponymus *Skolopites*, and his people the *Skoloti*. To connect this name with *Sapalaizes*, I would refer to the Sanskrit sava, a corpse, and savara, a name of Siva, as well as to the Latin sepeta and sepulcrum. I would refer also

to Sagillus, King of the Scythians, and to Sigal, the capital of the Sakastanian Sakas. The same name is found under several slight variations of spelling, of which the most notable is Kola-xais (or Skola-xais), the progenitor of the Paralatæ (or Sparalatæ), or Royal Scythians. On the coins of the Indo-Scythian Sakas we have the name of Sapaleises on one side, coupled with the name of the goddess Nanaia on the reverse. Sapal-eizes means simply the god Sapal, or Herakles, whose name and worship were widely spread amongst all the Scythian races. The Indo-Scythian kings Spalahora and Spalirises, in addition to their names, offer the seated figure of Herakles on their coins. On Mount Sambulos (or Sabul, dropping the epenthetic m) the Parthian king Goterzes offered worship to Hercules.29 name of the mountain is slightly altered by Pliny to Kambalidus.30

The last reading of Kambalidus points to Gebeleizes as only a variant form of Sapaleizes, to which I would add that Zamol-xis is another variant. I think also that the xis of Zamol-xis and the xais of Skola-xais, may be simply the equivalents of geises, gases, or geses, and eizes or ises, which form the termination of so many Scythian names. Xis and xais might be connected with the title of Shāhi, which was used by the Indo-Scythians both on coins and inscriptions. Gases and eises are found in Abdagases, Bolagases, Monneses, &c., and may possibly have some connection with the Sanscrit isa, or "lord," as in Vagises.

In further connection with the dead we have the form of  $\sum av\lambda \hat{\omega}\eta$ , which was the name of the place which held the tombs of the Parthian kings. And this form leads

<sup>29</sup> Taciti Annal., xii. 13.

<sup>30</sup> Plinii Nat. Hist., vi. 31.

to Shaul or Sheol, the Hebrew name of Hades. Bet-saloë also was the name of a place at Kutha, in Persia, which was noted for the worship of Nergal, or Hercules.

This widely-spread use of names connected with Sapal, or Heracles, seems to point to an early period in the world's history, when the worship of the God of the Dead had extended from the eastern shores of the Caspian to the banks of the Danube. And this extent of the Scythian territories was in fact claimed by the envoys of the Massagetæ when they met Alexander on the banks of the Jaxartes, "ultra Tanaim usque ad Thraciam colimus." 31

In the following account I have divided the coins of the Indo-Scythians into several different classes, which correspond with the several different periods of their history.

Class A.—Rude Imitations of Greek Coins, from first occupation in B.C. 163, down to establishment of Kushans in 116 B.C.

Class B.—Coins of the Sakas or Suca-Scythians in Arakhosia

and India, from B.C. 116 to 16.

Class C.—Coins of the Great Yue-chi, or Kushans, in Kabul and N.W. India, from B.C. 16 to A.D. 200.

Class D .- Coins of the Later Kushans in Kabul and N.W.

India, after A.D. 200.

Class E.—Coins of the Little Yue-chi, or Lesser Kushans, in Peshawar and N.W. Panjab, after A.D. 430.

Class F.—Coins of the Ephthalites, or White Huns, on the Indus, in A.D. 480 to 600.

## CLASS A .- RUDE IMITATIONS OF GREEK COINS.

Class A includes imitations of the small silver coins of Alexander the Great, and of the larger silver pieces of

<sup>21</sup> Curtius, Vit. Atex., vii. 8, 30.

Seleukus I. and Antiochus I. of Syria, and of the Bactrian kings Euthydemus, Demetrius, Eukratides, and Heliokles. These Bactrian imitations are by far the most numerous, and more especially those of Euthydemus in silver, and of Heliokles in copper. On some of the imitations of Antiochus and Euthydemus there are native characters in addition to the corrupt Greek names of the imitated coins. These native legends have not yet been read. They may be only transliterations of the Greek names, but Mr. Thomas's attempts to read them as such were not successful. The characters appear to me to be similar to those on the coins of the Arsakian kings of Parthia.

On the imitation of the tetradrachms of Eukratides I find the detached Greek letters NA. I have a cast of a true tetradrachm with the same letters, and there is a true coin of the same type in the British Museum. If these letters are intended for a date, they would represent 51, or, with the centurial figure added, they would represent 151 of the Seleukidan era, equivalent to B.C. 161, which corresponds with the early part of the reign of Eukratides.

The small silver oboli are simple copies of the coins of Eukratides, including even the monogram.

One of the coins having the name of Heliokles, with the figure of Zeus, is also a simple copy both of the obverse and reverse. But the other coin with the horse on the reverse is perhaps original, although the horse may have been copied from the square copper coins of Hermæus.

All these rude imitations of the Greek coins I attribute to the early Indo-Scythians who conquered the countries on the Oxus. Only a few stray specimens are found in the Kabul valley, and none in the Panjâb. The types are nearly all taken from the coins of the Greek kings who

ruled in Bactria, the few exceptions being copied from the money of Mithridates I. of Parthia. The Scythian archer, on the imitation coins of Antiochus, is probably original.

It is not easy to fix a date for the issue of these coins, but I am inclined to think that none of them can be earlier than B.C. 163, when the Yue-chi, being driven to the south of the Jaxartes by the Hiong-nu, pushed the Sakas to the south and west. The Bactrian Greeks then retired to the south of the Oxus, and, after some time, continued their retreat to the south of the Indian Caucasus, and left the whole of Bactriana in the hands of the Scythians. These coins I believe to have been issued chiefly by the Sakas; but until we can read the names recorded on some of them in native characters it seems useless to hazard any speculations about their issue. This rude coinage probably continued down to about B.C. 16, when the Kushân conqueror Kujula Kadphises imposed his name on the reverse of the copper coins of Hermæus.

The coins of Hurkodes are the only Scythian pieces that offer purely native types not borrowed from the Greeks. If I am right in identifying the hero figured on the reverse as the representative of the mythical leader of the Turki races, Burtechino or Bertezina, then Hurkodes must have belonged to the great horde of the Yue-ti; but to which of the five divisions there is nothing to show. The latter part of the name recalls the Thracian Kotys—of which Miltokuthes seems to be a compound form. But it is more probable that the Scythian name of Hurkodes may be a compound of Hurk, "the wolf," which is found in Hyrkania, and that Hurkodes is only a variant rendering of Bertechino, or Bertezina, or Burhatigin, the hero of the Turkish race. The armed figure on the reverse would then be the God of War, who was specially worshipped by

the Scythians. The legend of Ardethrou would then be equivalent to Raorethro of the coins of Huvishka—that is, the god Ares, or Athro. According to Abu Rihan's account, Barhatigin preceded Kanak or Kanishka. There are two distinct kinds of his coins—one with the war god on the reverse and the other with the fore part of a horse bridled. On the former the inscriptions are always in Greek letters; on the latter they are sometimes Greek on the obverse and Parthian on the reverse, or Parthian on both sides. The Greek inscription on the obverse is always YPKWAOY, and the corresponding Parthian inscription I read as Karatakin, or Garatagin. The Parthian inscription on the reverse I have not succeeding in reading. Mr. Thomas read it as Kuût.

The Greek legend of MAKAPOY APAHOPOY, which accompanies the divine figure on the reverse of the large coins, I take to mean simply "Ardethra of Makar," taking Makar to be the same as Bakar of the following legend, preserved by Biruni. "Kabul was formerly governed by princes of the Turkish race, and the first of them, named Barhtigin, dwelt when he arrived at Kabul in a cave (named Bakar)." After remaining in the cave for some time without food, "Barhtigin came all of a sudden out of the cave . . . clothed as a Turk, with a tunic, cap, boots, and armed from head to foot." A similar story was told of Bertezena, the first leader of the Turks. But Bertezena, or Burtechino, is clearly the same name as Barhtigin, and I have no doubt that the divine figure on these coins is intended for the legendary leader of the

<sup>&</sup>lt;sup>32</sup> Elliot's Muh. Hist., ii. 9. On the later coins MAKAPOY is changed to OAKAPo, which is an equally correct rendering of Buhar.

Turks, armed from head to foot, just as he was said to have issued from the cave.

The date of the coins of Hurkodes cannot be placed earlier than the first century, owing to the late shape of the omega, w. Raoul Rochette suggested that they might "have been struck by some of the barbarous tribes upon the borders of the Caspian, from whence they seem to have been brought."

Smardates and Rangodeme.—This curious coin presents two heads; that of a king on the obverse, and of a queen on the reverse. I have two other specimens of the same types, but in very bad order. I read the two names as TANAI CMAPAATHC and KYPIA PAT-ΓΟΔΗΜΗ, or King Smardates, and Queen Rangodeme. I take the king's name to be Smardates preceded by the title of Tanki, which I refer to the Scythian Tham, or "king." Tanli or Tanais may be compared with Justin's Scythian King Tanaus. The queen's name I take to be Rangodeme, and the term Kuria to be the title of "queen." We know from Herodotus that the Scythian Apollo was called OITO YPO E, but from an inscription we learn that the full form was ΟΙΤΟΣΚΥΡΟΣ, while the moon was called ΣΕΛΟΙΤΟΣΚΥΡΑ. The terms skuros and skura would thus seem to mean simply "god and goddess," or king and queen. By dropping the initial  $\Sigma$  in both we get kuros and kura.

There is nothing except the rude workmanship and the round form of the sigma, **C**, to declare the age of these coins. My three specimens were obtained at different times, and they are the only specimens that I have seen during fifty years of collecting. My impression is that they belong to the country on the Oxus, and that their style is due to Parthian rather than to Indo-Grecian influence.

INDO- SCYTHIANS - SAKAS, PI.I

## COINS OF THE SAKAS.

PART II.

BY

MAJOR-GENERAL SIR A. CUNNINGHAM, R.E., K.C.I.E., C.S.I.

REPRINTED FROM THE NUMISMATIC CHRONICLE, Vol X., Third Series, Pages 103-172.

LONDON: 1890.

		•

### COINS OF THE SAKAS.

### CLASS B.

### Coins of the Sakas or Sace-Scythians.

Class B includes all the coins which bear names either of Parthian origin, or of kindred forms, beginning with Moas and Vonones and ending with Pakores. There appear to be at least three distinct families of these Princes, the two earlier ones of Moas and Vonones being contemporary, while that of Gondophares was some time later. All the coins of this class have on their reverse literal translations in the Indian Pali language and in Arian characters of the Greek legends of the obverse.

Coins of MOAS.—The earliest coins of the Sakas or Sacæ-Scythians are certainly those of Moa, or Mauas, as his name is written in Greek characters. This name is found only in Western Asia in the compounds Moagetes and Moaphernes, but I have failed to find the meaning of it. Arrian mentions a king of the Sakas, named Mabakes, who joined Darius Codomannus. His name might also be read as Mauakes. A coin of Moagetes, tyrant of Kibyra, was published by Pellerin, with a monogram forming MOAF. Moaphernes was the uncle of Strabo's mother, and was a person of some consequence during the reign of Mithri-

dates of Pontus. 1 If the full name of this king was Moga, as I originally suggested in my reading of the copperplate inscription of King Moga, it is quite possible that the old town of Mong, in the Panjab, may have derived its name from him as Mogapura, which would soon Lave been curtailed and nasalized into Mong, after the usual Panjab fashion. It is certain at least that the coins of Moas are found only in the Panjab, not a single specimen, to my knowledge, having been found in the Kabui valley. The first coins of this prince were obtained by Ventura in the Panjab, and the whole of my own collection, now numbering over two hundred specimens of more than twenty different types, was gathered in the same country. His silver coins have been found at the old town of Mansera, sixteen miles to the north of Abbottabad, and about eighty miles to the north of Rawul Pindi.

By what route Moas and his followers reached the Panjâb is not clear; but I feel quite certain that they could not have come through Kashmir by the Karakoram Pass, as suggested by Professor Gardner, as that pass, instead of being open all the year round, is closed during winter, and could nerer be traversed by an army, even in summer. My own opinion is that the first bands of Scythians, the Sakas, came from the Oxus, as stated by the Chinese. They first occupied Sakastene, or Arachosia and Drangiana, but soon spread themselves over the country to the eastward, where they gradually got possession of the valley of the Indus, including both the Panjâb and Sindh. In fact, the Chinese authorities distinctly say that the Sakas, after their retirement to the south, formed several separate states.<sup>2</sup> The bolder and more adven-

<sup>&</sup>lt;sup>1</sup> Strabon. Geogr. xi., 2, 18, and xii. 8, 88.

<sup>&</sup>lt;sup>3</sup> Remusat, Nour. Mélanges Asiatiques, i. 205.

turous spirits might have pushed ahead, and overrun the Panjab up to the foot of the Kashmir hills within a couple of years, just as in after years was actually done by the Brahman Chach, as well as by the first Muhammadan conqueror, Muhammad Kâsim. I see no necessity for supposing that Moas and Azas came through Kashmir. Bâber and all previous invaders came from the west.

The Indian dominion of Moas seems to be plainly indicated by the Indian types of many of his coins. Thus, there are 4 with an elephant, 1 with an elephant's head, 4 with a river deity—which can only be the Indus, and 3 with a humped bull, or altogether eleven types referring directly to India out of the twenty-two types already known.

In later times we know that Husâm-ud-din Ewaz had already made himself the independent ruler of Bengal within twenty years of the occupation of Delhi by Kutb-ud-din Aibak. We have only fo suppose that Moas was the leader of the Sakas about B.C. 120, and that he himself pushed forward from Sakastene to India, leaving Vonones in command behind him. Then, about 100 B.C., Vonones may either have rebelled, or have been installed by Moas himself as king of Sakastene, while Moas himself was content with his Indian dominions.

Some supposition of this kind is perhaps required to account for the names of Vonones and Azas appearing on the same coin. On the death of Moas the vacant throne may have been claimed by Vonones, and the claim could have been adjusted by admitting the equal authority of Azas. Both chiefs called themselves "King of Kings."

The type of Poseidon trampling upon a river-god would seem, as suggested by Raoul Rochette, to point to a successful passage of the Indus. On one coin Poseidon, with trident in hand, is represented trampling the river-god with his foot, while he levels a thunderbolt against a small figure which is clinging to an aplustre, or raised "poop-ornament" of a boat. On another coin the same figure is apparently seeking protection from a tall female figure, which perhaps represents India. On another rare coin Zeus is seen seated, with the hasta pura in his left hand, and with right hand extended towards a small female figure surrounded by foliage, which I take to be a personification of India. This identification seems to be confirmed by the presence of the humped bull and the elephant on other coins.

It is worthy of note that on all the large coins of Moasa the native legend is limited to the simple title of Rajadiraja as the translation of ΒΑΣΙΛΕΩΣ ΒΑΣΙΛΕΩΝ, while the coins of all his successors take the fuller and loftier title of Maharajadiraja. On the large coins with the elephant's head the only legend is in Greek, ΒΑΣΙΛΕΩΣ ΜΑΥΟΥ. But in this instance the coin is probably an early one, as it is a simple copy of a coin of Demetrius. The small copper coins bear the simple title of Maharajasa Moasa.

The find spots of the coins of Moas and the Eastern Sakas are restricted to the Panjab, so far as my experience extends. A few specimens of Azas have been obtained round about Peshawur and in the Swat valley. I saw twelve of his coins extracted from beneath the statue platform of an ancient temple at Shah-dheri or Taxila.

Coins of VONONES.—The coins of Vonones and his family come chiefly from the ancient Arachosia, or Kandahar and Ghazni. Some have also been found in Sistân,

<sup>&</sup>lt;sup>1</sup> Archaological Survey of India, v. 72.

the ancient Drangiana. A few have been obtained at Kabul, but as not even a single specimen was got at Begram by Masson during his three years' collection, it seems almost certain that Vonones could not have ruled there. For a similar reason the family of Vonones could not have ruled for any time in the Panjâb, as their coins are very rarely found there. In fact, the Panjâb must have been held by Azas and his successors, whose coins are very numerous all over the northern districts.

It seems strange that no coins of Vonones himself have been found, his name being restricted to the obverses of the coins of Azas,<sup>4</sup> Spalahores, and Spalgadames. I think it probable that he was the great chief of the Saka horde, after the death of Moas, and that he must have remained in Sakastene, while his relatives and generals had possession of the eastern countries, Kandahar, Sindh, and the Panjäb.

I note that the silver coins of the two branches of the Sakas in Kandahar and the Panjāb bear the same type of the king on horseback, but their copper money has little in common. The type of the horseman was first introduced by Moas, and its general adoption by both branches seems to point to a community of race. Politically they were certainly connected, as Azas acknowledged the supremacy of Vonones, and afterwards of Spalirises, by placing their names on the obverse of his coins. On the first he adopts the simple title of Rajadiraja, which was used by Moas, while he gives the title of BAΣΙΛΕΩΣ

When E. Thomas stated that I had discovered a coin with the joint names of Assa and Vonones (Prinsep s Ant. ii., 203) he forgot that the coin was in the Stacy collection and that he had catalogued it himself (Bengal Asiat. Soc. Journal, 1858, p. 252).

**BAXIAEON** to Vonones. On the other coins he adopts an equal title with that of Spalirises.

Spalahora does not take the royal title of Basileus. He is simply the king's brother, and was no doubt the governor of a province with the title of Maharaja. His son Spalgadames also does not take the royal title, but calls himself simply the son of Spalahora. Spalirises, therefore, would appear to have been the King who succeeded Vonones. At first he calls himself the king's brother, and has the simple title of BAXINEUX. But afterwards as king he becomes BACINEUN BACINEUC. With Azas he calls himself BACINEUC METANOY, while Azas has the titles of Maharajasa Mahatakasa. At the same time the types of this coin are copies of one of the finest coins of Moas, while the monogram is the same, forming NIK [No. 2], although it does not appear to have been used by Azas himself.

There is a peculiarity in the Greek spelling of the name of Spalirises that requires special notice. On a few specimens it is written INAMIPICOY, as if the first letter was au imperfect square s. But the usual form is, PNAAI-PICOY, Rpalirisou. As the initial letter in the native legend is undoubtedly sp, the Persian form of the Indian sw, I take the character to be formed of the palatal sibilant \( \mathbb{I} \) s with \( \mathbb{P} \) joined on the right, thus making sp. As this s is frequently pronounced as sh, the initial rho, P. of the Greek rendering must be taken to represent the palatal sibilant, thus making the initial syllable spa, as in the Persian aspd. Now we know that the regular sibilant sh in the names of Kanishka, Huvishka, and Kushan is represented by a peculiar form of the Greek rho, thus P. with the perpendicular stroke elongated upwards: This peculiar use of rho to represent sh I pointed out in 1872.

when I suggested that it was in accordance with a well-known usage of the Turki dialects, which changes an initial s or s to r. The lengthening of the perpendicular stroke I was of course aware of, but I then considered it as only an abnormal variation. From these coins of Spalirises it would seem that the attempt to represent sh or the palatal sibilant s by a Greek rho, was made upwards of a century before the time of-Kanishka. The square sigma  $\Gamma$  is used for the name of Spalahora,  $\Gamma \cap \Lambda$  PIOC, and the round sigma  $\Gamma$  in the name of Sapaleizes,  $\Gamma$ 

It is difficult with our present scanty information to assign, with any degree of certainty, the countries over which the family of Vonones reigned. The facts recorded by Masson would seem to exclude them from the Kabul valley, as only two coins of Spalahores and three of Spalirises were found at Begram during three years' search. A good number of specimens were obtained by Colonel Stacy and Captain Hutton at Kandahar, and I have picked up a few in the Panjab. The Ventura collection, also made in the Panjab, contained only four specimens of this family.6 I am inclined to place them at the Saka capital of Sigal, which I would identify with Shal or Kotta (culgo Quetta), the Kottabara of Ptolemy. Their dominions would have embraced the Kandahar valley, and perhaps also Ghazni, while the Kabul valley was still held by some of the later Greeks.

Coins of AZAS.—The numerous silver coins of Azas, with but one exception, present the king on horseback on the obverse, with only the slight difference that on some

Num. Chron., 2nd Series, xii., 181. Dr. Stein's paper on this subject was not published until 1887, or fifteen years later. His Zoroastrian readings I will discuss hereafter.

Thomas, Prinsep., Plate XV., Figs. 5, 6, 9 and 10.

pieces the king bears a couched lance, while on others he carries a whip, and has a bow case behind him. These two varieties are given in Plate V., marked A and B.

This type of the king on horseback seems to distinguish all the Saka princes from the Kushâns. Moas has only two horseman coins of copper, but the horseman is by far the commonest type on all the coins of his successors Azas and Azilises. It is also the common type on most of the coins of Vonores and his relatives Spalahora, Spalgadama, and Spalirises. And at a still later date it was adopted by Gondophares and the members of his family Abdagases and Sasan. Lastly, it forms the type of at least nine-tenths of the money of the Nameless King.

Masson has recorded the important fact that not a single coin of Azas was obtained from the ruined city of Begrâm, to the north of Kabul. But his money is very plentiful in the Western Panjâb, where Ventura made a large collection, and where I have since obtained a great number of all types and sizes. I believe, therefore, that Moas and his successors, Azas and Azilises, must have ruled over the Western Panjâb, with their capital at Taxila, from about 100 to 20 B.C. During this time the Eastern Panjâb was certainly held by some of the later Greeks, with their capital at Sangala. These Greeks would include Zoilus, Dionysius, Straton II, and Apollophanes.

The Satraps, whose coins have been found in considerable numbers, such as Zeionises or Jihonisa, and Aspa Varma, must have been governors under Azas and Azilises. Of Aspa Varma we are quite certain, as he calls himself on his coins the General [stratega] of Azas.

### MIAÜS OR HERAÜS.

The nationality of Miaüs (or Heräus) and of the Nameless King is unsettled. I have placed their coins along with those of the Sakas, or Sacæ, chiefly on account of the horseman type, which is common to all the known Saka kings of the families of Moas and Vonones. For the same reason I look upon Gondophares and his relatives Abdagases and Sasan as later Sakas.

The coins of Miaüs (or Heräus, as read by Mr. Gardner) are altogether exceptional, as they consist chiefly of tetradrachms and oboli, of which no other examples have been found amongst the money of the Saka princes. I think it probable that Miaüs, or Miaius (as his name is also written), may be the interloper Yin-mo-fu, or In-mo-fu, to whom the Chinese attribute the conquest of Kipin in n.c. 49. The name on the coins is variously written, and may be read as MAOY and HIAOY on the tetradrachms, and as MIAOYE and MIAIOYE on the oboli. The name is preceded by the title of TYPANNOYN-TOE on the large coins, and followed by EANAB or EANAOB KOPEANOY, while the oboli omit the two titles, and read simply MIAOY KOPEANOY.

Mr. Percy Gardner <sup>7</sup> reads the name of the king as Heraüs, or HPAOY, just as I did myself when I got the first tetradrachun some twenty-five years ago. But after finding the oboli I gave up that reading for MIAOY. Mr. Gardner reads the whole legend as TYPANNOYN-TOΣ HPAOY ΣΑΚΑ Κ□ΙΡΑΝ□Υ. But he has omitted the letter B at the end of ΣΑΚΑ (or ΣΑΝΑ),

Brit. Mus. Catalogue of Greek and Scythian Coins, Introd., p. xlvii.

which is found on all the eight or ten tetradrachms that I have seen, and is quite distinct on the British Museum coin. He also points out that the third letter of the word read as EANAB is not found like the other N's on the coin, but like a retrograde V. But I may refer him to his own note at the foot of the same page, where the same retrograde form is found in the word read by him as KOIPANOY, but which should therefore be KOIPAKOY. M. Tiesenhausen's coin, he admits, seems to read, EANAB, and I may add that on one of my tetradrachms the N is properly formed, reading EANACB. I may mention also that on one specimen all the N's of Turannountos and Koiranou are retrograde.

Heraüs, according to Mr. Gardner, thus becomes a King of the Sakas; but according to my reading of the last two words **\Sanab** (or **Sanab**) KOPEANOY, he must have been the king (Sanaob or tsanyu) of the Korsáns or Kusháns. We know that on all the coins of Kujula Kadphizes the name of his tribe Kushana in the native legend, is rendered as KOPEAN in the Greek legend. We know also that Tsanyu or chanyu was a royal title. As an interloping conqueror Miaus may have been a Kushân, who made a temporary conquest of Kipin. All that the Chinese authors say of Yin-mo-fu or Insmo-fu, is that he was the son of the King of Yung-Khiu, and that he attacked and killed the son of U-theu-lao. King of Kipin, and took possession of his throne in B.C. 49.8 As U-theu-lao, the father, was a contemporary of Wu-ti of the Han dynasty, who died in B.C. 87, his son would have succeeded him about 70 B.C., and this date would agree very well with the date of his supplanter

<sup>•</sup> Remusat, Nouc. Melanges Asiatiques, i. 207.

Yin-mo-fu, who sent an embassy to the Emperor Hinoyuan-ti in B.c. 49.

Now the coins of Miaüs (or Heraüs) certainly belong to about the same period. The tetradrachms use the correct form of the sigma, X, as on the coins of Hermæus and Kujula Kadphizes, while on the coins of Kujula alone. and on those of Kadaphes, the round sigma, C, is used. Miaüs must therefore have preceded the final settlement of the Kushans under Kujula in the latter half of the first century B.C That he was a contemporary of Kujula is rendered nearly certain by the discovery of one of his oboli by Masson in the Kotpur Stûpa No. 2 along with ten copper coins bearing the joint names of Hermaus and Kujula Kadphizes.9 There was also included a clay seal with the "standing figure of an armed prince" holding a spear and shield. An engraving of this seal is given by Wilson in Pl. IV., Fig. 6, of the Relics of Masson's Topes. It agrees with the armed soldiers on some rare coins of the Kushan Prince Kujula Kadphizes, of which two specimens are shown in the accompanying plates. All the evidence therefore is strongly in favour of my conclusion that Misüs was a contemporary of Kujula. I may add the fact that both princes use the form of KJPLAN for the name of their tribe.

Another point in favour of the identification of Miaüs with *In-mo-fu* is the fact, also recorded by the Chinese, that the gold and silver money of *Kipin* bore on one side the figure of a horseman, and on the other side the head of a man.<sup>10</sup> Now, there are only two kings in the whole

16 Remusat, Nouv. Mélanges Asiatiques i., 206.

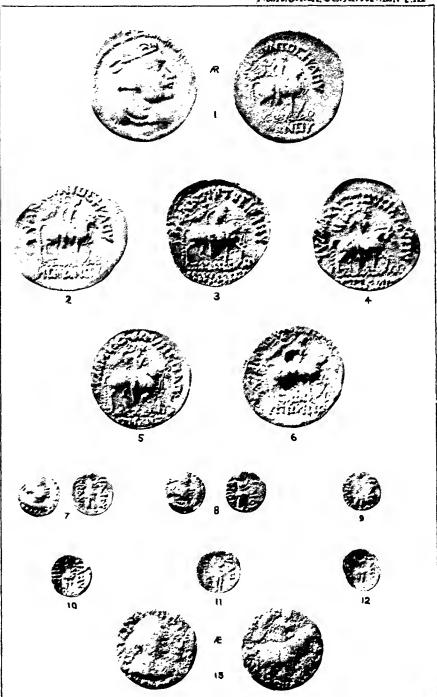

<sup>&</sup>lt;sup>9</sup> Wilson, Aziana Antiqua, p. 66, describes it as a small piece of silver, with one side worn smooth. I examined the coin myself in 1867 in the Masson collection in the India Office, and recognised it as an obolus of Miais.

series whose money corresponds with this description. These two are Miaüs and the Nameless King. But as no silver money of the latter has yet been found, the description agrees only with that of Miaüs.

The Greek title ZANAB or ZANALB may perhaps be intended for the Scythian title of tsangu, which is a contraction of Tsemli-kuthu-tanju, or "Heaven's-son-great," of which only the first and last syllables are preserved in the Scythian title. The meaning of this title is exactly the same as that of the Chinese Tien-tse, or "Son of In the Indian inscriptions of the Kushan Heaven." Princes Kanishka and his successors Huvishka and Vasu Deva the same title is given to them in its Indian form of Dera-putra, or "God's-son." I therefore read ZANAB KDPEANDY as tsûnar-korsanou, the exact equivalent of Dera putra Kushana. In support of this reading I am now able to refer to a duplicate copper coin of Miaüs, on which one half of the Arian legend is quite legible. Under the king's bust I read Maharaja, the equivalent of TYPANNLYNTOX, and on the right hand I read Decaputra ku, the rest being illegible. All the left half of the legend is lost. But the title of Decaputra, which was peculiar to the Kushan kings, coupled with the reading of KDPLANDY, seems to me to offer a very strong proof that Miaiis was not a Saka king. I take him to have been the chief of the Kushûn tribe of the Great Yueti, and I think also that he may possibly have been the father, as well as the predecessor, of Kujula Kadphizes, who united the five tribes of the Great Yueti, and conquered the last Greek Prince Hermæus.

Coins of the NAMELESS KING.—The immediate successor of Miaüs was most probably the Nameless King, who gives only the titles of BACIAEVE BACIAEUN

Num. Chran. Ser. [L. Vol. VIII. P.L. III

MIAUS OR HERAUS CHIEF OF THE KUSHANS.

CLITHP METAC. His coins are exceedingly common all over the Panjab, as well as in Kandahar, and in the Kabul valley. They are of several types, but not one of them gives even a single letter of any name. The inscription is simply BACINEYC BACINEWN CWTHP MEFAC. All of them have a three-pronged symbol, which was apparently the peculiar symbol of this prince. On two of my coins the symbol has four prongs, owing perhaps to a blunder of the die-cutter. On the helmeted and bilingual coins, and also on the small Ardokhro coins, there is a single Arian letter, +, Vi, which may possibly be the initial of the king's name, perhaps of Vikramaditya, whose date, as well as I am able to judge, must have coinsided with that of this nameless prince. His rule must have been very extensive, as well as very long, as his coins are found as far eastward as Mathura.

I have sometimes thought that this nameless prince with the initial Vi might be identified with one of the early Kushân kings, by supposing that these coins without name might be the money of his different satraps in the conquered provinces, while the gold and copper coins, which bear the names of the Kushân kings themselves, would have been the coinage of the Kabul valley. The syllable Vi would thus stand for the initial of Vima or Vikramadita. I have already noticed that both sets of coins have the inscription in the nominative case, BACINEYC BACINEUN. The sceptre carried in front of the face is also a peculiarity of the Kushân king's coinage.

The want of monograms which distinguishes the coins of the Nameless King from those of the Partho-Scythian dynastics of Moas, Vonones, and Gondophares, would seem to connect him with the Kushans. The bust also does the same. But the horseman is the favourite type of the Saka kings.

The coins of the Nameless King are found in copper only. His Mathura coins were a local coinage, which is not met with elsewhere. As Mathura certainly belonged to the early Kushan kings this local coinage must have been issued with their authority.

I have already pointed out the possibility that Vonones and the Saka kings may be alluded to in the traditional account of the early rulers of Sindh preserved by Rashidud-din.<sup>11</sup> Their names are.—1. Kajand, the founder, who was not a Hindu; 2. Ayand; 3. Rásal; and 4. Roál, and his brother, 5. Barkamūris.

- 1. Kafand, who sent his brother Sâmid against Mahra, the Persian, to expel him from Sindh. By a very slight change of r to w the name of Mahra may be read as Mahua, which would correspond exactly with the Greek Maua. As Vonones and Mauas would appear to have been contemporaries, the former ruling in Arakhosia, the latter in the Panjâb, I think that the identification of Mauas with Mahra, the antagonist of Kafand, is not an improbable one. The name of Kafand might even be a possible alteration of Wanum, or Vonones.
- 2. Ayand I would identify with Azas, whose name is written Aya in the native legends of his coins. He was a powerful king, who divided his dominions into four separate governments. This would agree with the known facts of the reign of Azas, who certainly confided one province to his general, Aspa Varma, and most probably a second to the satrap Zeionises, whose coins are copied from those of his supposed suzerain. Azas was also a contemporary of Vonones, as both names are found on a rare coin of early date copied from Moss.

<sup>11</sup> H. M. Elliot's Muham. Historians of India, i. 108.

- 3. Rasal I would identify with Azilises. He is said to have lost part of his kingdom to a rebel. This rebel, I have already suggested in another place, might have been Miaüs (or Heraüs).
- 4. Roal I would identify with Sapaleizes, as the reign of each was a short one.
- 5. Barkamāris, his younger brother, might be the Nameless King, whose coins are very numerous. All India is said to have submitted to him. For "all India" we must read the countries on both banks of the Indus, now known as Afghanistan and the Panjāb.

### DYNASTY OF GONDOPHARES.

There are four members of the dynasty of Gondophares, who are united by a common symbol, as well as by an acknowledgment of relationship. The symbol may be described as a variant form of the caduceus of the planet Mercury. If I am right, its use would be very appropriate on the coins of Gondophares, as I take his name to be one of the Indian titles of the god of the wind, as Gandha-rāha, or in Persian Gonda-bara, or the "Scent-bearer."

The names of these princes are Abdagases, the nephew of the founder, Orthagnes, and Sasa. With them must be classed Arsakes and Pakores, and perhaps Sanabares. I possess also four coins of this Partho-Scythian class, with a king's bust and Victory, which, as the portraits differ from those of the known kings, must belong to other princes of the same dynasty. Unfortunately the legends are too much injured to be deciphered.

The date of Gondopharcs is very clearly defined by his coins, which are certainly later than those of the dynastics of Vonones and Azas, and earlier than those of Kanishka—that is, they are later than B.C. 50, and earlier than

A.D. 78. This date is corroborated by the legendary account of the visit of St. Thomas to King Gundofores, to which I was the first to draw attention in 1854.<sup>18</sup>

The Legenda Aurea says that Gundofores, King of Upper India (Indiam superiorem), sent an official (propositus) named Abbanes, to obtain a skilful architect. St. Thomas accompanied Abbanes to India, where he is said to have converted the king himself, as well as his brother Gad, and his sister's son, Labdanes. Another version says that Migdonia, the queen's sister, was converted, on which account St. Thomas was put to death. Lastly Leucius, in the Apocryphal Acts, states that the Apostle was sold as a slave to King Gundophores, after which he went to the country of Meodeus, where he was eventually put to death. 15

An inscription of Gadaphara, or Gondophares, found at Takht-i-Bahi, to the north-east of Peshawur, is dated in the 26th year of his reign. There is also a date of Samvat 103, as I read it. The numeral for 100 is certain, and as this is followed by three upright strokes, the whole date would appear to be 103. The era, however, is quite unknown. If referred to the Vikramâditya Samvat it would be 103-57=46 a.d. This date would place the beginning of the reign of Gondophares in 46-25=21 a.d., and, as his coins are very numerous, he must have had a long reign, perhaps thirty or forty years, or down to a.d. 50 or 60. The reading of the name of Gadaphara in

<sup>&</sup>lt;sup>12</sup> Journal Bengal Asiat. Soc., 1854—"Coins of Indian Buddhist Satraps."

<sup>13</sup> See Thomas, Prinsep. ii. 214—Gutschmid quoted by Oldenberg in Ind. Antiq. ix. 262.

Turner, Anglo-Saxons, ii. 147, and Mrs. Jameson's Sacred and Legendary Art, i. 225.

<sup>15</sup> Sir Henry Yule, Cathay, ii. 376.

the Takht-i-Bahi inscription is thought to be doubtful by those who have not seen the stone. I have examined the inscription many times, and I reassert that the reading of the name is most certainly Gadaphara, the separation in the middle of the name being simply due to an original fault in the stone. I may note here that there are many similar faults in the great Kâlsi inscription of Asoka.

Abdagases is a known Parthian name, as that of one of the nobles who dethroned Artabanus in A.D. 35. He was then an old man of great power and influence, but the active rebellion was carried on by his son Sinnakes. As the dates correspond, it seems to me quite possible that this Abdagases may have been the father of Gondophares, as well as of Sinnakes, and that the son of Sinnakes may have been named after his grandfather, Abdagases. would make our Abdagases the brother's son of Goudophares, as stated on his coins. The discovery of a silver coin of Gondophares, of Parthian type, with the title of Autokrator, is greatly in favour of my conjecture that he must have belonged to a powerful Parthian family, such as that of Abdagases, the noble who assisted in the dethronement of Artabanus. I may note that I have possessed two silver coins of Artabanus, countermarked with the peculiar symbol of Gondophares.

The coins of Abdagases, like those of his uncle, are of two distinct classes, namely, bust coins and horseman coins. The latter alone give the family relationship of bhritaputra, or brother's son, while the former bear the simple titles of BACINEWC CWTHPOC. Perhaps the horseman coins may belong to a period of dependency during the lifetime of his uncle, while the bust coins may be assigned to his independent sovereignty. His name is written in Arian character Acudagasa.

A few rare specimens of the bust type bear the somewhat similar name of Hardagases, in Greek APAAFACOY, and in Arian letters Hardagasa. The Greek P and the Arian initial H are quite distinct; but as I have not seen more than four specimens, I am inclined to look upon them as exceptional variations, more particularly as the Arian legend may be preferably read as Haradagasa. In this case the Greek P would be only an incomplete B.

The coins of Sasan, as I have ventured to call the king whose name in the native character, if indeed it be a name, is written Sasasa, are not uncommon. They are of two types, each bearing a horseman on the obverse, and a figure of Zeus on the reverse. On one class Zeus simply extends his right hand; on the other he holds out a figure of Victory. On both the name of Gadapharu occurs in the native legend. On the first kind the name of Gadaphara is preceded by a title which I read as Derahadasa, or Deratrada—the letter d is certain. seems to be a title of Gondophares, as it is found on his square coins. I have suggested Deva-hridya as a possible reading, after the manner of Diotrophes and Theotropos. On the Greek side I have not, amongst hundreds of specimens, been able to make out any name. I have found ACOY on one coin and ACHC on another. The native name is written with three similar letters, Sasasa, of which the last is simply the gentive case. I have sometimes thought that Sasasa might be a colloquial form of Swasriyasa, or the "sister's-son" of Gondophares. Sasi, however, is found in several native names, as Sisenes, Sisimithres, Sisikoptos, Sisugambis, and others. Sasan, or Sassan as it is also written, was an undoubted Persian name. Two or three of this name are mentioned amongst the ancestors of Ardashir, of whom one at least was as old as the date of Gondophares. In the St. Thomas legend Labdanes is said to have been the sister's son of Gondofores.

The coins of Orthognes are of two classes, each bearing a bust and a figure of Victory, but with different legends. One has the simple titles of BACIAEWC METAAOY, while the other has BACINEYC BACINEUN MEFAC OPOAINHC. The native legends also differ, the former being a mere copy of the Greek, while the latter introduces the name of Gudaphara immediately before the king's own name. The four letters forming the name seem to read Gurdanasa, or simply Gadanasa. Gurdana occurs in the name of Gurdanaspa. Orthagnes would have been pronounced Orthanes (Strabo), and I would compare it also with Ordones and Bardanes. I consider the name of Orthagnes to be the true form of the later Orlagno, which is found on the coins of the Kushan king, Kanishka. According to Dr. Stein this name (OPAAINO) "was first recognised by Benfey as Verethraghna, the Iranian wargod." 16 The king's name of OPOAINHC shows that the other form is corrupt, and that we should rather read OPAATNO. Verethrughun is the old Avestic form of the name, which became Varakrin in Pahlavi, and Bahrâm in modern Persian. Dr. Haug 17 compares the old form with the Vedic Vritraha, which was one of the titles of Indra, as the "killer of enemies." An older Indian form was probably Vritraghan, in which the g of Orthagues and Orlagno is preserved. The old form of ghan is seen also in Amitra-ghata, which has the same meaning of "enemy killer." I would further compare the name with the Latin Fercirius, which was an old title of Jupiter.

As the name of Orthagnes is written in Arian characters

Babylonian and Oriental Record, i. 159.

<sup>&</sup>quot; Haug, Essays on the Parsis, by West, p. 213.

as Gurdana or Gadana, beginning with the letter G, it seems not improbable that he is the king's brother mentioned in the legend of St. Thomas under the name of Gad.

The coins of Arsakes are extremely rare. Dr. von Sallet has published a square copper piece copied from the money of Moas, but without any native legend. Greek legend is incomplete BACIAEWC OEOY . . CAKOY. The name might therefore be either Basakes or Masakes; but as Arsakes is known from other coins of a different type it seems a preferable reading. The types of this square coin would point to some connection with the earlier dynasty of Moas, but as the types of the larger coins are like those of the Gondophares family it seems more probable that Arsakes belonged to the later dynasty. The use of the round sigma, C, on three of his four known coins, shows conclusively that he must have been later than Moas and Azas. He takes the title of BACIAEY. ONTOC BACINEWN, which is also found on some coins of Abdagases. The types are the king on horseback, with Zeus carrying a figure of Victory. He uses a symbol peculiar to himself. None of his coins have been found in the Panjab.

The coins of *Pakores* come from Kandahar and the countries to the west of Bhakar, on the Indus. They follow the types of Orthagnes with a bust of the king and a figure of Victory. The native characters are peculiar in having an angular foot-stroke. The name of the king is written *Pakurasa*.

The great power of Gondophares is proved by the wide extent of country over which his coins are found. In 1840-41 both Colonel Stacy and Captain Hutton obtained them in Kandahar and Sistan, whilst I have found them all over the Panjáb, from the hills down to Multan.

Masson obtained only fifty-five specimens from Begråm during his three years' collection, but he found none in the Kabul Stûpas, and only four specimens in those near Jalalabad, where they were in company with numerous coins of Kujula Kadphises and a few of the Nameless King. I conclude, therefore, that he was a contemporary of Kujula, who must have held the Kabul valley, while Gondophares ruled over Kandahar and Sistan in the west, and over Sindh and the Panjâb in the east. After his death, about A.D. 50 or 60, the Panjâb was wrested from his successors by Yen-kao-ching, or Wema Kadphises, the Kushân conqueror of North-west India.

### SAKA SATRAPS.

I have kept the coins of the Saka satraps apart from those of the kings, as I felt uncertain where to place them. That they belong to the period of Saka rule is clearly shown by their types, which are chiefly copied from the coins of Azas.

But a most decisive proof of their Saka nationality is found in the Arian Pali inscriptions of a pillar capital which was found at Mathura about twenty years ago by my lamented friend, Pandit Bhagwan Lal. The principal inscription records the erection of a Stûpa for the relics of Buddha by the Queen Nandasriya in the time of the great Satrap Rajul (Rajubul of the coins) and of the Yuva Raja Kharadost, who also bore the title of Satrap. Mention is made of Prince Tulama, the son of Kharadost, and also of the Satrap Sudás, the son of Rajul. A separate inscription on the same capital records the name of the great Satrap Kusulaa, who is almost certainly the Satrap named Liaka-kusulaka in the Taxila copper plate. 18 In both

<sup>&</sup>lt;sup>18</sup> Bengal Asiat. Soc. Journal, 1863, and Royal Asiat. Soc. Journal, vol. xx., p. 280—for translation by Professor Dowson.

inscriptions the title of patika is added to his name. A silver obolus of this Satrap, copied from the well-known oboli of Eukratides, is shown in Plate I., Fig. 8. On the same capital with these Satrap names there is a short record which proves that all of them must have been Sakas. The words are sarra Sakastána puyae, "for the merit of all the people of Sakastán," that is of the country occupied by the Sakas. The name of the city of Taxila is also found on the capital. At this time, therefore, the Indian territory of the Sakas must have extended from the Indus to Mathura, and from Kashmir to Sindh.

The Taxila copperplate inscription of Liaka-Kusulaka is dated in the year 78 of the great king Moga. As the number 78 is too high for a single reign the date must refer to the era of Moga, and if, as I suggested in 1863, he is the same as King Moa, or Mauas, of the coins, who was certainly one of the leaders of the Sakas, the establishment of the era may be referred to their conquest of the provinces on the Indus. As this event cannot be placed later than B.C. 120 the date of Liaka-Kusulaka would fall about 40 B.C., or rather more than half-a-century before the conquest of the Panjab by the Kushan king, Wema Kadphises.

But we learn further from this Mathura inscription that most, if not all, of the Saka Satraps had embraced Buddhism. I had previously discovered the Stupa of the Satrap Jihonisa, or Zeionises, at Manikyala, and now we learn that the whole family of the great Satrap Rajubul had founded a Stupa at Mathura to contain some relics of Buddha. There is nothing, however, to show whether the great Saka kings themselves, Mauas, Azas, and Azilises, had also become Buddhists. Their coins show no traces of Buddhism. On the contrary they show the

marked devotion of the Saka Scythians to the worship of the club-here Sapal, or Herakles, the Gebeleizes of Herodotus, and the Sapaleizes of our coins.

The worship of the club-god was indigenous in the Panjab, as we learn from Q. Curtius that a statue of Herakles was carried in front of the army of Porus when he advanced against Alexander. Strabo also says that the people in the hills of India worshipped Bacchus, while the people of the plains worshipped Herakles.19 The worship of Bacchus appears to me to have been founded on a mistake. According to Khares of Mytilene, one of the companions of Alexander, the actual name of the god was Σοροάδειος, that is, Súrya Dera or the "sun-god." The name of Sûrya, or Sûrah, the sun, must have been confounded with sura, wine, as Khares gives its translation as ouvomoios, or "wine-maker." We know from Philostratus that there was a temple of the sun at Taxila, and from Plutarch, de Fluviis, that there was another on the Hydaspes, to which the elephant of Porus ascended on the advance of Alexander. The Indian Herakles is called Dorsanes by Hesychius. Arrian also says that the Suraseni called him Gégenés, or "indigenous," 20 and Diodorus states that he was born in India.21

# JIHONISA OR ZEIONISES.

As the coins of Zeionises or Jihonisa are of superior execution, I would assign him to an early date during the reign of Azas, or about 80 B.C. I take him to have been the Satrap of Taxila, as I found one of his coins in a Stûpa at Manikyâla, along with a relic casket marked

<sup>19</sup> Geogr. xv. 1, 38.

<sup>20</sup> India, viii. p. 4.

<sup>&</sup>lt;sup>21</sup> *Hist.* ii. p. 24.

with the Arian letter  $\gamma$  (J) on each of its three pieces.<sup>22</sup> The coins give the name of his father *Manigul*, and as he is also called a satrap, I think it probable that *Manikyâla* may have received its name from him. The coins of Jihonisa are found chiefly in the north-west Panjâb. The silver pieces are rare, but the copper coins are common. The name of Manigul is decidedly like that of a later prince Mihirgul.

# ASPAVARMA, SON OF INDRAVARMA.

The coins of this chief certainly belong to the reign of Azas, as the name of the king is found in the Greek legend of the obverse, while the striker of the coin calls himself Strategasa (Strategasa (Strategasa) in the Arian legend of the reverse. Both the name and the title were first read by myself. I see that Dr. Von Sallet proposes to read Aspa-bati, while Dr. Oldenberg prefers Aspa-pati. But I most decidedly demur to both of these readings. The compound letter which I have read as rm in conjunction is simply formed by lengthening the right limb of the crescent-shaped m, across which is placed the letter r. The correctness of the attribution is proved by its use in the well-known word Dharma, on the coins of Kadaphes. Exactly the same process is followed in the formation of ro in Sarva, and of ry in acharya, and of rkhe in Arkhebiyasa (Arkhebios), and of rt in Artemidorasa (Artemidorus). The coins of Aspa Varma are common. They are found all over the Panjab, but chiefly in the north-west. legends are neatly but rather stiffly executed. No specimens were found at Begram by Masson, which tallies exactly with the absence of the coins of Azas himself at the same old site.

<sup>22</sup> Archael. Survey of India, vol. ii., Pl. LXV.

### COINS OF THE SAKAS.

# SON OF VIJAYA-MITRA.

There are some rare coins of the same types as the last, which bear the names of other native chiefs. Nos. 7 and 8 of the Plate give the father's name in Vijaya-mitra-putrasa, or "Vijaya-mitra's son;" but I can only trace the beginning of the satrap's own name as Ati or Atri. The coins can be distinguished at once by the presence of a star on the right, and of a Buddhist symbol on the left.

# KHARAMOSTIS, SON OF ARTAÜS.

The coins of the satrap Kharamostis are very rare. They are all square, and bear types of the horseman and lion as on some of the coins of Azas and Azilises. The specimen No. 9 gives the Greek legend complete—

# XAPAMWETEI CATPAREI APTARY.

The native legend is generally incomplete, and has not yet been read satisfactorily. I make out with some hesitation—

Kharn[m]ostasa Artasa chhatrapasa putrasa. The father's name would appear to be simply Arta in the native legend, and Artaüs in the Greek legend. The coins are found only in the North-west Panjab. They are very rare, as I have seen only seven specimens in fifty years. I had one in 1841, which was engraved in my unpublished plates. But he must have been a chief of some note, as his name occurs three times in the great satrap inscription from Mathura, which is now in the British Museum.

In line 4 on top he is called Khara ostara Yuva Rajna. In line 1 of No. 3 he is called Khara osta Yuva Raja.

In right corner of No. 4 he is called Kharda asa Chhatrevasa.

Here we see that he bears the title of Yuva-raja, or "Sub-raja," which was generally given to the heir-apparent. In one only is he called satrap in the peculiar local form of Chhatrava for Chhatrapa, a peculiarity which is seen also in the word thuva, for thupa, the Pali form of Stûpa. The same peculiarity still exists in the use of wind for pind in Rai-wind, near Lahore.

# Râjubula.

The coins of this satrap were first made known by myself in 1854<sup>23</sup> from a hoard of base silver pieces found at Mathura. Since then I have received several small copper coins of similar types and legends from the Eastern Panjâb, besides a few copper specimens from Mathura of pure Indian types, with Indian Pali legends. On these last the inscription is simply Mahakhatapasa Rājubulasa, "of the great Satrap Rājubula." In the Greek legends of the billon coins he takes the title of "King of kings,"

BACINEI BACINEWC CWTHPoC PAZIBA, but in the Arian legends of the reverse he is called simply Satrap, with the additional title of "invincible with the discus."

Apratichakrasa Chhatrapasa Ranjubulasa.

Several of these billon coins have the Greek monogram No. 55, forming EY, which I take to represent Euthydemia or Sangala, as on the coins of Zoilus and others, from which his types are copied. From the find-spots of his coins, I conclude that Rājubul must have held the East Panjāb and North-west India as far eastward as Mathura. In the great satrap inscription from Mathura his name is shortened to Rajula in two different places.

<sup>2</sup> Journal Bengal Asiat. Soc. p. 679.

An imperfect inscription which I found at a well near Mathura gives the full name in Indian Pali letters as Rājubula.<sup>24</sup> I take him to have been the independent ruler of North-west India just before the conquest of Wema Kadphises early in the first century A.D.

# SAUDÂSA.

Rājubula was succeeded by his son Saudāsa, of whom both coins and inscriptions have been found at Mathura. On his coins he is called Mahakhatapasa putasa Khatapasa Saudāsasa, or simply "Satrap" and not "great Satrap," like his father Rājubul. I had already proposed this connection with Rājubul, which has since been confirmed by the discovery of the great Satrap inscription at Mathura in which he is called

Mahachhatravasa Rajulasa-putra Sudâsa chhatrava, that is, "the great satrap Rajula's son Saudâsa the satrap." As none of his coins have been found in the East Panjâb, I conclude that his rule was limited to the districts around Mathura during the rule of the great Kushân conqueror Wema Kadphises.

King's head, as on No. 1, with Arian legend.  Iter.—King on horrebuck, with Victory flying behind.  TYPANNOKEPEAN.  N.B. The name of this king is uncertain. In 1861, when I got his first coin, I read the name us Herais, just as Mr. Percy Gardner still reads it; but some years afterwards, on obtaining other specimens, and more particularly a number of oboli, it seemed to me that Miaiis would be a preferable reading. Some of the oboli insert an i after a, thus making either HPAICIE or MIAICE. If the copper coin had been in better preservation we should, no doubt, have got the reading in the Arian legend. I have discussed the name and position of this king in another place.	NAMELESS KING.  [Brit. Mus. Cat., xxiv. 6.]  Bust of king to P., with created helmet, holding a lance upright in r. hand, surrounded by circle of fillets. Behind head three-pronged symbol, No. 66, and in front the Arian letter 1:

PART II.

SUPPLEMENT.

Bl.

MAJOR-GENERAL SIR A. CUNNINGHAM, R.E., K.C.I.E., C.S.I.

REPRINTED FROM THE NUMISMATIC CHRONICLE, Vol. VIII., THIRD SERIES, PAGES 47-58.

LONDON: 1888.

# COINS OF THE INDO-SCYTHIAN KING MIAUS. OR HERAÜS.

In 1874 Mr. Percy Gardner published a tetradrachm similar to those represented in the accompanying Plate. He attributed the piece to Heraüs, King of the Sakas, by reading the legend <sup>1</sup>

# TYIANNOYNTOE MIAOY EAKAB KOIIANOY.

🗚 Τυραννοῦντος Ἡράου Σάκα Κοιράνου.

This assignment of the coin to a Saka king was eagerly adopted by Mr. Fergusson, who, by a bold conjecture, metamorphosed the Turushka king Kanishka, the sovereign of the Kushans, into a king of the Sakas, and the founder of the Saka era.<sup>2</sup>

But Mr. Fergusson was not the only rebel against "time-honoured" Sâlivâhana, whose name, as Professor Kern boldly suggested, 3 had been added to the Sâka era by the English. But this suggestion is utterly without foundation, as there are many inscriptions, both in Southern and in Northern India, dated in the Salivahana Sâka era. I need only quote one of S. S. 1466, or A.D. 1544, from

<sup>&</sup>lt;sup>1</sup> Num. Chron., N.S., xii. p. 161.

<sup>&</sup>lt;sup>2</sup> Royal Asiatic Society Journal, 1880, "On the Saka, Sumvat, and Gupta Eras."

Dr. Max Müller, India-What can it tench us? p. 800.

Bådâmi in Southern India, and another of S. S. 1583, o a.D. 1561, from Chamba, in the Punjab. Does Professo Kern believe that the English ruled over India in those years?

In 1881 Dr. Oldenberg published a notice of the same coin, in which he retained the reading of **EAKA**, and ignored the existence of the following letter **B**, while he objected to Kovávov, and proposed to read either Koranou or Korranou. He thus found "a decisive proof" that the Korano or Gushân prinees, and more especially "Kanishka, must be regarded as Sukas." He then goes on to say that "we know from coins as well as from inscriptions of a mighty Sûka king Kanishka." With this statement I altogether disagree. I am well acquainted with all the inscriptions and coins of the Indo-Scythian princes, and I can state positively that neither coins nor inscriptions give the title of Saka to Kanishka. In the inscriptions he is always called by his own tribal title of Kushân, or Gushân, and on his coins he is invariably called Korano.

I presume, however, that Dr. Oldenberg refers to this coin of Heraüs as establishing his conclusion that Kanishka was a king of the Sakas, or Saka-Kushâns. But the reading of ΣΑΚΑ I dispute, as all my coins read ΣΑΝΑΒ and not ΣΑΚΑ. This word is, however, not always spelt in the same way. I find ΣΑΝΑΒ on six coins, the N being sometimes reversed, ΣΑΝΑΟΒ on one coin, and ΣΑΝΑΒΙΥ on one coin.

It is true that the N is sometimes reversed, but so it is sometimes both in TYPANNOYNTOΣ and in KOIIA-

<sup>&</sup>lt;sup>4</sup> Indian Antiquary, x. p. 67. Archaol. Survey of India, xxi. p. 186.

<sup>&</sup>lt;sup>5</sup> Indian Antiquary, x. p. 215.

MOY. Of the latter form Mr. Gardner has given an instance in his footnote, page 47, quoting M. Tiesenhausen's coin.

Taking the various readings of Sanab, Sanaob, and Sanabiu, I think it probable that the term may be intended to represent the native title of tsanyu, or chanyu, "chief," or "king." As the last word on the small silver oboli is KOPLANOY, there can be no doubt that the king belonged to the Korsan, or Kushan tribe. Tsanyu is a contraction of Tsemli-Khuthu-tanju, "Heaven's son great," or "Great Son of Heaven," = Devaputra. As the common pronunciation of the Greek B was V, the Greek form of ZANAB, or ZANABIY, would approach very nearly to the native title.

With respect to the tribal name of Kushdn, an examination of the earlier coins of Kujula Kadphizes shows that the first Greek forms of the name were Korsna, Korsan, and Khoransu, which agree with the title of KOPLANOY on the oboli of Miaus in the Plate. In common speech this name might become either Korano by the omission of s, or Kushan by the omission of r. But the Greek form I prefer to derive from the common practice of changing s to h, which would change Korsano into Korhano, or into Korrhano, or KOPPANOY.

That the original form of the name was Korean, or Khorsan, is, I think, supported by the name of the province of Khorasán, which was certainly occupied by this tribe. I suspect also that Chorsari, which Pliny says was the name given by the Scythians to the Persians, must refer to the Kushans of Khorasan, who had come to be looked upon as Persians by the Scythians of the Jaxartes.

According to my view the legend of the tetradrachms is simplyΤυραννοῦντος Μιάου Σανάβ Κορσάνου, "Of the supreme king Miaüs, chief of the Kushans."

On the oboli the legend is restricted to two lines, in which the name of the prince is spelt in two different ways, as MIAOYE and MIAIOY. With the tribal title of KOPEANOY below, the whole legend is simply "Miaŭs, the Kushân," or rather the Korsan.

The unique copper coin is unfortunately too much worn to give any assistance in reading either the name or the titles. But as it bears an Arian legend in addition to the Greck inscription it is invaluable as a proof that the territory over which the king ruled was not Bactria, but some country to the south of the Hindu Kush. On the Greek side I can read TYPAN and KOPLAN; but of the Arian legend I can make nothing certain.

Of the find-spots of the tetradrachms I am unable to speak. But of the oboli I can say positively that my twelve specimens all came from Western Afghanistan, that is from Kabul and the country to the south of Kabul. A thirteenth obolus was actually found by Masson in No. 2 Tope at Kotpur, along with ten copper coins bearing the joint names of Hermaeus and Kujula Kadphizes. Masson describes the coin as "a small circular piece of silver, doubtful whether a coin from its smooth reverse, but on the obverse bearing the bust of a king, whose head was bound with the Greek diadem." I saw the piece in the Indian Museum in 1870 amongst Tope relics, and I at once recognised it as a coin of Miaüs, from the king's head being an exact representation of the head on the two tetradrachms which I then possessed. In the same Stûpa

<sup>5</sup> Ariana Antiqua, p. 66.

Masson obtained a clay seal (see Ariana Antiqua, Plate IV. Fig. 6 of Antiquities), with an armed figure standing with lance in hand. As my new coins of Kujula Kadphizes present the same armed figure we thus obtain a second connection with Kujula.

With respect to the date of Miaüs I think that the following facts all point to the latter half of the first century B.C.

- 1. One of his coins was found in company with ten copper coins bearing the joint names of Hermæus and Kujula.
- 2. The Greek  $\Sigma$  is used always in *Turannountos* and *Sanab*, but in Korsano it takes the round form, which is also found on some of the later coins of Hermæus.
- 3. The type of the king on horseback, with Victory flying behind to place a wreath on his head, is the prototype which was afterwards copied on the coins of Gondophares.

Taking these facts in conjunction with the find-spots of the coins, I infer that Miaüs must have ruled over the country to the south-west of Kabul, about Wardak and Ghazni, some time during the latter half of the first century B.C.

If my inference be correct we may, perhaps, gain some further information about this unknown king from the Chinese records. Turning, then, to their account of *Kipin*, that is of the country to the south-west of Kabul, I find the following facts recorded.

1. The first King of Kipin known to the Chinese is named *U-theu-lao* by Remusat<sup>7</sup> (or *Woo-tow-laou* by Wylie). He was reigning about the beginning of the

<sup>&</sup>lt;sup>1</sup> Remusat, Nouv. Mélanyes Asiatiques, i. p. 207.

first century B.C. He was succeeded by his son, who was defeated and killed by a rebel named Yin-mo-fu, son of the King of Yung-Khiu, assisted by the Chinese. Yin-mo-fu thus became King of Kipin. Having imprisoned the Chinese general Chao-te and killed some seventy of his officers, he sent an embassy to China to excuse his conduct. But the Emperor Hiao-yuan-ti had then stopped all communication with foreign countries, and the embassy was not received. As this emperor began to reign in 48 B.C., the conquest of Kipin by Yin-mo-fu may be placed about 50 B.C.<sup>8</sup>

2. The people of Kipin had gold and silver money which bore on one side the figure of a horseman, and on the reverse the head of a man. Wylie says a man on horseback and a man's face.9 Now it is remarkable that the only coins which tally with this description are those of Miaus and of the nameless king. But as there are neither gold nor silver coins of the latter the description can apply only to the former. This being the case, the coins with a horseman on one side and a king's head on the other should belong to Yin-mo-fu, the conqueror of Kipin, and Yinmo-fu should therefore be Miaus, or Miaios. There is a tempting resemblance between the two names, which, supported by both time and place, suggests the possibility of identifying Yin-mo-fu, King of Kipin, with Miaus, or Minius, whose coins belong to the same country as well as the same age.

With respect to the name of the king, I must confess that it is still uncertain. Twenty-five years ago, when I got my first two tetradrachms, I read the name as HPAOY,

<sup>Remusat, Nour. Mélanges Asiatiques, i. p. 206
Num. Chon., N.S., ix. p. 79.</sup> 

or Heraüs, as I noted at the time in the Journal of the Bengal Asiatic Society. In 1874, after Mr. Percy Gardner had published the British Museum coin, on which he also read the name as Heraus, I was induced to examine the silver oboli of the same king which I had lately acquired. On some of them I found a sloping stroke in the first letter of the name, which seemed to agree with the first letter on the two tetradrachms, Nos. 3 and 4 of the accompanying Plate. I then read the names as NIAOYE, or MIAOYE, and also on some of the oboli as NIAIOY, or MIAIOYL. On looking over the recorded names of Indo-Scythian kings, it struck me that the Greek name might possibly be a variant form of the Chinese name of Yin-mo-fu. Except for this possibility I cannot say that my present reading of Miaus is preferable to my early reading of Heraus. For the solution of the doubt we must await the discovery of a second specimen of the bilingual copper coinage, as the native rendering of the two names in Arian characters would be very different. Heraüs would most probably be ZATY, Herayasa, while Miaus would be ZATY, Miayasa.

But whether the name of the king be Heraüs or Miaüs. it is certain that he belonged to the KOPLANO, or Kushan tribe, and consequently that he could not have been a Saka. I will now try to make this clear. For many centuries before the arrival of the Yuechi horde in Bactriana, the provinces on the Jaxartes and Oxus had been occupied by the Sakas, or Sacæ, where they successively opposed the armies of Cyrus, Darius, and Alexander. Their language, as shown by their names as well as by the Scythian version of the cuneiform inscriptions of Darius, has little in common with that of the Kushans who formed one of the five tribes of the Yuechi-a great

Turkish horde. Darius records the suppression of the rebel Sarukha, a leader of the Sakas. Herodotus describes the Scythians in the army of Xerxes as Amurgian Scyths who carried the battle-axe called Sagaris. They were therefore the same people whom Darius calls Saka-Humararga. There can be little doubt therefore that they were the same as the Sagaraukæ, who also carried the Sagaris, from which they must have derived their name. I have long ago identified the Sagaraukæ with the Sarduchæ of Trogus by reading A for  $\Delta$ , and eliding the q. The words of Trogus are very important: 10 "Scythicæ res additæ, reges Thocarorum Asiani, interitusque Sarducharum." Now the Thocari are the Yuechi, who were called Tusharas, or Tukharas, by the Indians, and Tu-ho-lo by the Chinese; and the Asiani must be the Kushans, or Gushans, whose chief conquered the other four tribes, and took the title of "King of the Kushans." The Sarduchæ are the Sai, or Sakas, who were driven out by the Kushans. Now this title of "King of the Kushans" is found on all the coins of Kujula Kadphizes, the Yuechi chief who conquered Hermæus, the last of the Greek kings of India.

That the Yuechi were a different race from the Sakas is shown by their history as related by the Chinese annalists. In the beginning of the second century B.C. they were driven by the Hiungnu from their home in the province of Shensi, near the Great Wall of China. They retired to the west, and, being again defeated and their king killed by the Hiungnu, they migrated still farther to the west, and settled in the country along the Jaxartes in B.C. 163. In a short time they spread over the whole of the provinces on both banks of the Oxus, from which.

<sup>16</sup> Justini, Prol., chap. xlii.

about 130 to 126 s.c., they expelled the Ta-Hia, or Bactrian Greeks, and the Sai, or Sakas. One hundred years later the chief of the Kuei-shwang, or Kushân tribe, having subdued the other four tribes, united the whole horde of the Yuechi, and took the title of "King of the Kushâns," after which he conquered the Kabul Valley, where he came into contact with the Greek king Hermæus.

Now this title of "King of the Kushans" is the same that was borne by Kanishka, who is styled in Court's Manikyala inscription "Samvardhaka Gushana vansa," or "the aggrandizer of the Kushan race." In the Sanskrit history of Kashmir he is called a Turushka, or Turk. Hwen Thsang calls him a Tuholo, or Tukhara, while Biruni and other early Muhamedan writers call him a Türk, to which Biruni adds that his ancestor, the founder of the family, was Barhatigin. As Tigin is a Türki word, this statement furnishes another proof of the Türki origin of the Kushans.

Hwen Thsang says that the language of Folishisatangua, or Kabul, was different from that of Tsau-ku-ta, or Kipin. Again, in speaking of Tsau-ku-ta, or Kipin itself, he says that the writing and language were different from that of other countries. But if the Kushans were Sakas, the language of the Kushans of Kabul and of the Sakas of Kipin (Sakastene) would have been the same. The Kushans are, in fact, separately distinguished from the Sakas in the Allahabad Pillar Inscription of Samudra Gupta under the well-known title of Dairaputra Shahi, which was used by Kanishka and his successors in all their inscriptions.

<sup>&</sup>lt;sup>11</sup> Beal, ii. p. 285; Julien, ii. p. 190.

<sup>&</sup>lt;sup>12</sup> Beal, ii. p. 284; Julien, iii. p. 188.

In the face of all these facts I do not see how it is possible to maintain the identity of the Sakas and the Kushâns. Even if the word which I read as EANA should hereafter be found to be actually EAKA, as read by Mr. Gardner and Dr. Oldenberg, I should object to these two distinct peoples being rolled into one tribe of Saka-Kushâns. My explanation would rather be that Heraüs, or Miaüs, was the king of both peoples—of the Kushâns by inheritance, and of the Sakas by conquest.

I will now describe the different coins of this king which I have given in Plate III.

#### TETRADRACHMS.

- Obr.—Bare head of king, diademed, to right, with long hair and moustaches, surrounded by border of fillets.
- Rev. King on horseback, to right, left hand holding bridle, right hand resting on how-case attached to saddle. Victory flying behind with wreath in outstretched hand to crown the king. Legend in corrupt Greek characters in one half-circle above, and two straight lines below.
- No. 1.—ΥΥ/ΑΝΝΟΥΝΤΟΣ ΗΙΑΟΥ ΣΑΙΊΑΒ ...IANOY.
  - 2.—ΤΥ/ANNOYNΤΟΣ HIAOY ΣΑΝΑΒ ΚΟ((ANOY)
  - 8.—ΤΥ/ ANNOYNTOΣ MIAOY Σ. I. N. I. OB HNY 4NOY.
  - 4.—**ΤΥ/ΑΝΝΟΤΟΥ**ΟΣ ΗΑΟΥ ΣΑΙΛΑΒ **ΠΙΑΗΟΥ**.
  - 5.--TY/ANN OYOYNE OAO'//, EANABIV
  - 6.—TV/ANNOYN EOA BY YTIIANOY.

The British Museum specimen agrees very closely with Nos. 1 and 2, but the coin of M. Tiesenhausen, quoted by Mr. Gardner, appears to be more like No. 4. My No. 6

is an ancient forgery thickly plated. The other five coins average 226 grains, the heaviest, No. 4, being 240 grains.

#### OBOLL.

The small silver coins preserve very successfully the portrait of the king as shown on the tetradrachms. The weight varies from 8 to 9, 9‡, 10½, and 11 grains. Mr. Thomas 13 notices one of these oboli in the possession of General Pearse, but he seems to have looked upon it as belonging to the barbarous imitations of the oboli of Eukratides, as he describes it as "an example of an exceptionally common class of silver coins," whereas General Pearse's and Masson's specimens are the only coins that I know of in addition to my own.

Obv.—Bare head of king to right, as on the tetradrachm, in a dotted circle.

Rev.—Male figure, standing to right, with both hands raised.

Greek legend in two perpendicular lines.

No. 7.— 對IAIOY.	XOPCANOY.
8.— HAIOY.	KOPCANou.
9 WIAIOY.	KOTCANOY.
10 ALAOYE	· OIIAyou.
11.—MIAOY	KOFCANOY.
12WIAOYC	. OPCA.

#### COPPER CHALKOUS.

13. Obr.-King's head to right, with Arian legend illegible.

Rev.—King on horseback to right, with Victory flying behind, as on the tetradrachms. Greek legend imperfect.

I can read TYPAN to left, and KOIC below, but I do not see any trace of letters between the horse's feet.

<sup>13</sup> Bactrian Coins and Indian Dates.

# 12 coins of the indo-scythian king miaus or heraus.

Some day, perhaps, a lucky find will give us the king's name in Arian characters. The legend on the right looks as if it was Maharayasa.

With respect to the letter **B** at the end of the word **ΣΑΝΑΒ**, Mr. Thomas has a curious note in which, by some legerdemain, he makes it an undeveloped form of a well-known monogram **2**. This he takes for *Drangia*; but unfortunately in the Greek spelling of the name **ΔΡΑΓΓΙΑ** there is no **N**, while there are two gammas, of which there is no trace in the monogram.

# COINS OF THE KUSHANS,

OR

# GREAT YUE-TI.

PART III

BY

MAJOR-GENERAL SIR A. CUNNINGHAM, B.R., E.C.I.E., C.S.I.

REPRINTED FROM THE NUMISMATIC CHRONICLE, Vol. XII., THIRD SERIES, PAGES 40-82.

LONDON:

1892.

# COINS OF THE KUSHÂNS, OR GREAT YUE-TI.

## CLASS C.

# (See PLATES IV.—VIII.)

BEFORE describing the coins of the Kushans, it is necessary that I should state my reasons for considering them a separate race, quite distinct from the Sakas, or Sacæ This is the more necessary as the Turki nationality of the famous King Kanishka has lately been denied by Mr. Fergusson, relying on the erroneous reading of the legend of a single coin. The coin was a tetradrachm of Heraus, or Misus, on which the legend of EANAB KOPEANOY was read as EAKA KOIPANOY, or King of the Sakas. In my original paper on the coins of this chief, I suggested that the word ZANAB might be only the Greek form of the title of Tsanyu or Tanju, which is itself a contraction of the Chinese Tsem-li-Khu-thu-Tan-ju, or "Heaven's-son-Great," or "Great son of Heaven." My suggestion has since been confirmed by the acquisition of a duplicate copper coin, on which in Gandharian characters I read the Indian title of Deraputra, which has exactly the same meaning. As this title is used by the three Kushan kings Kanishka, Hu-

Num. Chron. 3rd Series, viii. 47, and x. Pl. IX. fig. 3.

vislika, and Vâsu Deva, its use by Miaüs would seem to prove that he also was a Kushân, as I had already pointed out by my reading of KOPLANOY.

The earliest notices of the Kushans we owe to the Chinese. In R.C. 165 the Great Yue-ti, being driven across the Jaxartes by the Huing-nu, succeeded in establishing themselves in Sogdiana. After some time they advanced to the Oxus, and about R.C. 126, they were found by the Chinese envoy Chang-kao in full possession of Bactriana, from which they had driven out the Ta-hia, or Greeks, and the Sai, or Sakas. The horde then consisted of five tribes. One hundred years later, or about 20 B.C., the chief of the Kushan tribe subjugated the other four tribes, and took the title of "King of the Kushans." This king, named Kieu-tsiukhio, then crossed the Caucasus and occupied the Kabul valley. He has been identified by general consent with Kujula Kadphizes of the coins, who was the contemporary of the last Greek King Hermæus. His son, named Yun-Kno-ching, is said to have conquered India. As Yun, Hun, and Wan are only dialectical variants of the same term, I have identified the conqueror of India with the Hima or Wema Kadphises of the gold and copper coins, and also with Wen, the common ancestor of no less than ten of the reigning families of the Yue-ti in Bactriana and Sogdiana.2 All of these chiefs bore the title of Shao-wu, which I long ago identified with the ZAOOY of the coins of Kozola Kadaphes.

<sup>2</sup> Remusat, Nouv. Mélanges Asiatiques, i. 227.

Num. Chron. 1872, p. 181. My reading of ZAOOY for ZAOOY is not alluded to by Prof. P. Gardner in the Brit. Mus. Cat., published in 1886, p. 128, where he notes the correction.

As these Chinese accounts are generally corroborated by the few statements of classical anthors which have come down to us, I will now compare them together.

- 1. Strabo (Geogr. xi. 8-2) states that "the best known tribes (of Scythians) are those who deprived the Greeks of Bactriana, the Asii, Pasiani, Tokhari, and Sakarauli, who came from the country beyond the Jaxartes." Here, then, Sakarauli are clearly the Sakas, and the Tokhari are the Yue-ti, who drove out the Sakas. The Pasiani I would identify with the Kushans. Trogus also refers to the same events when, after noting the rebellion of Theodotus, he says [Prolog. xli.]: "Deinde qua re pugnantes Scythicæ gentes Saraucæ et Asiani Bactra occupavere et Sogdianos."
- 2. The death of the Parthian King, Phraates II., B.c. 126, in battle with the Scythians, as related by Justin [xlii. 1], I would refer to the retreat of the Sakas southward before the Yue-ti. The death of the next Parthian King, Artabanus II., in B.c. 123, in battle with the Thogarii, I would refer to the advance of the Tokhari, after the defeat of the Sakas.
- 3. The Chinese account of the subjugation of the four tribes of the Yue-ti by the chief of the Kushans (the fifth tribe), is confirmed by the statement of Trogus (Prolog. xlii.), "Addite res Scythice"; "reges Thogarorum Asiani, interitusque Saraucarum." This I take to be a succinct record of the fact that the Kushans (Asiani) gave kings to the Tokhari, and defeated the Sakas (Saraucæ).
- 4. Both Trogus and Justin spell the name of this people with Th, as if derived from a Greek source. I notice this spelling for the purpose of referring to a statement of Pliny, who says that the stone Callaina, of a pale

green colour, is found in the country of the Phycari.4 As he locates the Phycari at the back of the Indian Caucasus, I would correct the name to Thychari, by changing the Greek • to O. This change is supported by the fact that the Callais or Callaina stone, the "Turquoise," is most plentifully found at Nishapur in Khorasan, in the Western extension of the Caucasus. We thus learn that the Tokhari had pushed their conquests westward as far as Nishapur, before the time of Pliny, or say as earls: as By the Hindus these princes were named in 50 A.D. Sanskrit Tushara, or "men of the snowy land." But the Pali or spoken form of the name was Tukhara, which was the original of the Toyapoi of Strabo and Ptolemy, and of the Tu-ho-lo of the Chinese. The name is still preserved in Tokharistan.

The successor of Yun-kao-ching (or Wema Kadphises) was Kanishka, of whom we possess several brief but independent notices, all of which give the most clear and satisfactory evidence that he was not a Saka.

According to the Raja Tarangini (i. 170), he was a Turushka, or Turk (Turushkanwaya).

In Court's Manikyâla inscription, he is called "the aggrandizer of the Gushân race" (samvardhaka Gushâna vansa).

According to Biruni (Sachau's translation, ii. 11), Raja Kanik was the descendant of the *Turki* chief, *Barhatagin*, the founder of the *Shahiya* rule in Kabul. He is further described as being dressed like a *Turk*, in a high hat and boots, which is a *very exact* description of the costume of

<sup>&</sup>lt;sup>4</sup> Nat. Hist., xxxvii. 33.

I would identify him with Burtechino, or the "dun wolf," who was believed to be the progenitor of the whole race.

the Kushan kings, Wema Kadphises and Kanishka, as seen on their coins.

Having thus shown, as I believe conclusively, that Kanishka was a Kushan Tukhara, it follows that he could not have been the founder of the Saka era. The era is, in fact, always ascribed to a Saka King in hundreds of inscriptions. In one of the most ancient inscriptions, indeed, the establishment of the era is referred to the abhisheka, or "installation" of the Saka king. I believe that the actual founder of the Saka era was the Saka king Chashtana, the Tiastanes of Ptolemy, whose descendants certainly made use of it in dating their coins and inscriptions.

But if Kanishka did not found the Saka era, it does not seem likely that he would have used it. What, then, is the era which is found in the inscriptions of the three Kushan kings, Kanishka, Huvishka, and Vasu Deva, in both the Gandharian and Indian characters. This I believe to have been the Seleukidan era. My reason for this belief is the fact that the Kushans make use of the Macedonian months. The names of Artemisios, Panemos, and Apellaios were first read by myself. Daisios followed soon after: and I am now able to add Perities. It seems therefore a reasonable conclusion that the Kushans must have adopted the Macedonian calendar of the Seleukidæ. If so, the date of these three Kushan kings might be explained by the omission of the hundreds of the Seleukidan era, which we know was a common practice in India in reckoning the Sapt Rishi kál, or "Era of the Seven Rishis." This mode is used in fact throughout the Raja Tarangini. I find the same mode also on the coins of the Rajput Chief, Malaya Varma Deva, which bear the shortened date of S. 83, as well as the full date S. 1283

This practice of expressing curtailed dates, by leaving out the hundreds, had already been adopted on some of the coins of the Greek kings, Eukratides and Heliokles. Mr. Thomas thus explained the letters  $\Pi\Gamma = 83$ , on the coins of Heliokles, by pointing to the full date of  $P\Pi\Gamma = 183$ , on a tetradrachm of the same king in the British Museum. In the same way I would explain the letters NA = 51, and  $O\Gamma = 73$ , on the tetradrachms of Eukratides as being intended for 151 and 173 of the Seleukidan era.

The earliest and latest dates of Kanishka yet found are 8.7 and 8.28, which, if referred to the Saka era would be A.D. 85 and 106. But if read as 407 and 428 of the Seleukidan era, they would correspond with A.D. 95 and 116. The difference from the Saka era is only ten years; but I must confess that I feel a strong repugnance to the use of the Saka era by the Kushâns. I fully believe that the Saka era was founded by a Saka king; but as it is not impossible that the Kushâns might have adopted the same era, I am willing to make use of it as giving at any rate a very close approximation to the true dates of the Kushân kings. Their dates would, therefore, be as follows:—

- B.c. 10. Kujula Kadphises.
- A.D. 80. Wema Kadphises.
  - " 70. Kujula Kara Kadphises.
  - ., 78. Kanishka.
  - " 120. Huvishka.
  - " 150. Vasu Deva.
  - ,, 176 = S. 98-latest date of Vasu Deva.

# KUJULA-KADPHISES.

The coins of the Scythian chief, Kujula Kadphises, King of the Kushans, are very numerous both in the Kabul valley and in the Western Panjab. From his coins we learn that he was the overthrower of the last Greek king, as we find the name of the Greek Hermseus associated with that of the Scythian Kujula Kadphises on the same coins. On those with the joint names of Hermæus and Kujula, the Greek legend is invariably blundered, as BAXIAEOX XTHPOX XY EPMAIOY. But the same blundered legend is also found on the small coins with the figures of Victory and of Zeus seated, which bear the name of Hermæus alone, although the native legend is quite correct. Fifty years ago, I suggested that the letters **Y** might possibly be intended for Συγγενής, the "kinsman" of Hermæus, by the marriage of the Greek king's daughter with the Scythian conqueror. In this manner Seleukos and Chandra Gupta became allies; and at a later date the Sassanian Hormisdas II. married the daughter of the Kushan King of Kabul. Such an alliance would have secured for Kujula a favourable reception by the Greek subjects of Hermæus. I only offer this as a mere conjectural explanation of the puzzling XY.

The coins Nos. 5 and 6 of Plate XIV. are specimens of a new and rare type, on which the king is represented, with a helmet, on the obverse, and armed with a spear and shield on the reverse. A clay seal with the same figure is given in *Ariana Antiqua*, Pl. IV. 6, amongst the relics found by Masson in the Kotpur Stûpa.

Kozola-Kadaphes I take to be only a variant spelling of the same king's name, on the issue of a different mint. The head seems to be imitated from the coins of Augustus, his contemporary.

The coins with the two-humped camel were formerly assigned to Azas. Several years ago I read the name in

the long native legend as Kujula-Kura-Kudphises. He must have been a king of the Kushâns, as he takes the well-known Kushân title of Deva-putra. I conjecture that he may have been the eldest son and immediate successor of Kujula Kadphises, and, therefore, the predecessor of Wema Kadphises. So far as I know, his coins are rarely found to the west of the Indus.

# WEMA-KADPHISES.

The coins of Wema Kadphises offer little variety. The reverses, without a single exception, are confined to the worship of the Indian god, Siva. On some, the god is represented standing alone, holding a trident in his right hand, with the tiger's skin on his left arm, and a water vessel in the hand. On others he is accompanied by his bull, Nandi. On the small gold coins, quarter dinars, the type is simply the trident of Mahadeva with the axe attached to the side.

On a single double dinâr the king is seen sitting on a throne with both feet resting on a footstool, and holding a flower in his right hand. On the other coins he is represented holding a club either in front of his face or resting on his right shoulder. On a single gold dinâr he is seen riding in a two-horse chariot with his club resting on his right shoulder and a small driver in front.

The Greek inscriptions are invariably in the nominative case, either BACINEVC BACINEWN CWTHP MEFAC OOHMO KAAPICHC as on the copper coin, or simply BACINEVC OOHMO KAAPICHC as on the gold coins. The native inscription is always in the possessive case, Maharajasa rajadhirajasa sarcaloga iscarasa mahisrarasa hima kathpisasa tradata. I havé long ago

identified *Hima*, or **OOHMO**, with *Wen*, the common ancestor of all the Kushan kings. *Wen* is identical with the variant pronunciation of *Yen* and *Hen*. The Chinese give this name at full length as *Yen-kao-ching*, and attribute to him the conquest of India. His rule probably extended from 30 to 70 A.D.

## KANISHKA.

The name of Kanishka has been preserved by the Chinese both in its full form as Kia-ni-se-kia, and also in its common spoken form as Ka-ni-kia, or Kanikh. It is found in the native history of Kashmir as Kanishka, a Buddhist prince of the Turushka race; and in its shortened form of Kanak it is preserved by Al Biruni as the Turki king of Kabul, who founded the great Stûpa at Parshâwar. In his inscriptions his name is invariably written Kanishka, both in Indian and Gandharian characters. On his coins the Greek spelling is KANHPKOY and KANHPKI, which may be rendered as Kaneshka, taking the abnormal P to be intended for sh.

On his coins we see the various changes of his religious belief. According to the Chinese pilgrim, Hwen Thsang, "he had no faith either in right or wrong, and he lightly esteemed the law of Buddha." His earliest coins show a preference for the pantheism of the Greeks in the worship of Helios, Salene, and Hephaistos. Then comes a mixture of Mazdean fire-worship and Indian nature-worship, followed by his conversion to Buddhism. The name of Kanishka is famous in Indian history as the great patron of Buddhism, who assembled a synod of five hundred monks in Kashmir, under Pârswika, for the compilation of an authoritative text of the Buddhist scriptures.

The inscriptions of Kanishka are dated in various years, from S. 7 to S. 28—which, if referred to the Saka era of 78 A.D., are equivalent to A.D. 85 and 106.

## HUVISHKA.

Huvishka, the Hushka of Kashmirian history, was certainly the successor of Kanishka, as the dates of his inscriptions begin with S. 33, and continue at various intervals down to S. 51 of the Wardak record. The Buddha Gayâ Colossal Buddha, which is dated in S. 64, I would also attribute to his reign, as the impression of one of Huvishka's gold coins formed part of the Relic deposit under the throne of the Great Temple of Mahâbodhi at Buddha Gayâ. As the two extreme dates of S. 33 and S. 64 are equivalent to A.D. 111 and 142, I think that we may safely assign to him a long reign, from S. 32 to S. 72, or from 110 to 150 A.D. The Roman gold coins found in the Ahinposh Stûpa confirm this date, as the latest coin of Sabina, the wife of Hadrian, cannot be earlier than 136 A.D.

The coins of Huvishka present the same mixed cult of Mazdean and Indian origin as those of Kanishka, with a few additions such as the Mazdean Ashavikhsho and Oaninda, and the Indian Mahasena, Skanda Kumāra, and Visdkha. His gold coins, which are very numerous, present the king's bust, and on one rare variety the head only. A few very rare coins show the king seated or riding an elephant. The copper coins present the full-length figure, either riding on an elephant, or lounging on a couch, or sitting crossed-legged. On two very rare copper coins, now lost, the king was shown on his knees before the goddess NANA.

### VASU-DEVA.

Vasu-Deva is connected with Kanishka and Huvishka by the similarity of his coinage in weight, make, and type, and in the peculiarity of using only Greek inscriptions. Three of his gold coins were found in a ruined Stûpa, below Ali Masjid, and there was a large number of them in the treasure trove of about 1,200 dinârs found at Peshâwar. They are common also all over the Punjâb and in North-west India. His inscriptions have hitherto been found only at Mathura and in the Indian character. But other inscriptions in Gandharian characters show that it was in use for some time after his reign. The dates of his Mathura inscriptions range from S. 746 to S. 98, or from a.D. 152 to 176. I think it probable, therefore, that his reign may have extended from 150 to 180 a.D.

The most notable peculiarity about his coins is the change in the symbol. His three predecessors, Wema Kadphises, Kanishka, and Huvishka, had all made use of the same symbol. But the symbol of Vasu-Deva must have had some marked significance, as it is used as the sole type of one of his copper coins (Pl. XXIV. fig. 1) with his name in Indian characters, written perpendicularly, Vasu. This particular symbol continued down to the time of the Guptas. The only innovation that I notice on the coins of Vasu-Deva is the representation of the god Siva, with three heads and four arms, in the orthodox Indian fashion.

<sup>&</sup>lt;sup>6</sup> Originally I read this date as 44, but as the symbols for 40 and 70 are very similar I have no hesitation in correcting my reading to 74 (see *Archaol. Survey* ini., Pl. XV., No. 8), as we know certainly that Huvishka was reigning from S. 33 to S. 51.

### Types of the Coins.

As many of the coin types of the great Kushan kings, Kanishka, Huvishka, and Vasu-Deva, appear to me to refer to the worship of the seven planets, and the various functions assigned to their regents, I have thought it most convenient to arrange them in the same order as the names of the seven week-days. I find about thirty different types, most of which appear to be susceptible of explanation. The chief difficulty lies in determining the source from which each name may have been derived, whether from India or Persia. At the first glance we can see that the figure labelled MIIPO is the Persian Mithra, or the sun, while that labelled MAACHNO must be the Indian god of war, Mahasena. The goddess NANAIA, or NANA, must also have been derived from Persia, while CKANAO-KVMAPO is clearly the son of the Indian god Siva. The termination of all the male names in O shows a decided Iranian influence. But the Kushans themselves were a Turki tribe of Scythians, of whose worship we know absolutely nothing. On examining the coins of the first two kings I find that Kujula Kadphises adopted the type of the standing Herakles, while Wema Kadphises adopted the type of the Indian god Siva with his bull. But as the Greeks had already, as early as the time of Alexander, identified that Indian god with Herakles, I infer that the chief object of the early Kushan worship must have been the Scythian Herakles, or Sapaleizes, whom I would identify with the Scythian god Gebeleizes of Herodotus. A figure of Herakles was carried in front of the army of Porus. The people of the plains also are said to have worshipped Herakles, while the people of the hill country worshipped Σοροάδειος, that is Surya Deva, or the "sun," and not Dionysos, the "god of wine," as Khares, of Mytilene. erroneously translated the name by οἰνοποιός. or the "wine-maker."

The objects of worship in ancient India and Persia sprang from a common source. The gods of India are well-known. Those of Persia have been described by Herodotus, Strabo, and Diodorus. They comprised the sun and moon, and the four elements of fire, wind, earth, and water, with the firmament of Heaven over all. Herodotus adds that "these were the only gods whose worship had come down to them from ancient times; but they afterwards adopted the worship of Urania from the Assyrians." This new goddess is Anaîtis (Nanaia or Venus), whose worship was introduced by Artaxerxes Mnemon.

In the time of Herodotus the Persians had no temples and no images; but both temples and statues of Mithra and Anaïtis were introduced during the reign of Artaxerxes I. (B.c. 485—435). About four centuries later statues of Omanos, Anaïtis, and Anadatus were seen by Strabo in a temple of Kappadokia. The statue of Omanos, which was of wood, was carried in procession. The temples were Pyrætheia in which a perpetual fire was kept. These are the Fire Temples of the Parsi books, called Azer or Ader. Each temple received a separate name from the planet or power to which it was dedicated. The

<sup>&</sup>lt;sup>7</sup> Strabo, xv. 1-58.

following lists are taken from Hyde's Relig. Vet. Pers. 100, and from the Bundahist (West, p. 21):-

Temples.			Planets.
Azur i Mibr Azur i Nûsh Azur i Behrâm . Azur-áyin Azur i Khurdád . Azur i Barzin	0 4 t 8 4 9	Sun Moon Mars Mercury Jupiter Venus	MITHRA MAH BAHRÂM TÎR AHURMAZD ANAHID
Azur Zardusht .	b	Saturn	KEWAN

These names clearly represent the seven planets. But there is another set of seven names, consisting of Ahurmazd and the Ameshaspentas, or Amshaspands. were originally mere abstractions which, being afterwards personified, were held to be the offspring of Ahuramazda. Their names are-

Haurvatat, genius of health, presided over water. Ameratat, genius of immortality, presided over trees. Kshathra-vairya, perfect sovereignty, presided over metals. Asha Vahishta, holy order, genius of fire. Armaiti, Vesu Aramati, goddess of earth. Vohumano, good thought, god of living beings.

The names of the Amshaspands are taken from the Gáthas, or earliest portions of the Avesta, which are generally admitted to be as old as the time of Darius Hystaspes. It must be remembered, however, that Ormand is mentioned in the inscriptions by Darius himself.

During the six centuries between Darius and Kanishka

several of the names preserved in the Gâthas of the Avesta became much modified. The later forms of the Indo-Scythian coins, as Dr. West observes, "bear a strong resemblance to Pahlavi, with a general leaning rather towards modern Persian than towards Avesta forms." All of these changes will be noticed hereafter.

A Zoroastrian origin for some of these Indo-Scythian deities has been claimed by Dr. A. Stein, based on a new reading of the variant form of the Greek ro in the names Kanishka and Huvishka, and of their tribal name of Kushan. So far back as November, 1860, when I read the name of Huvishka in the Mathura inscriptions as they were exhumed, I recognised that he was the OOHPKI of the coins, and the Hushka of Kashmir history, as well as the Huvishka of the Gandharian inscription on the Wardak Vase.8 This change I explained by the well-known usage of the Turki dialects, which substitute r for an initial s or The title of PAO I took for the simple title of Rao or I see that M. Ed. Drouin notes that Rao is a modern form; but I believe this to be a mistake, as the title of Rao is commonly used by the bard Chand before A.D. 1200, and is found in all the bardic chronicles at a still earlier date. In fact, the Racs of Jesalmer are said to have used no other title from the very foundation of their kingdom in the first century A.D. But as the title of PAONANO PAO shows a decided Persian form like Shahana-Shah, instead of the Indian form of Raja-Rajanam,

<sup>•</sup> The identification of Hoerki with the Hushka of Kashmir I had made as early as 1845. See Journal Bengal Asiatic Society for that year, p. 431.

I am willing to accept Dr. Stein's reading of this abnormal form of ro with the side stroke lengthened unwards as sh.9 It is, perhaps, not impossible that the Kushans themselves may have pronounced the title as Rao, whilst all other people said Shao. But the Chinese form of the title Shao-wu seems to confirm the native pronunciation of Shao. I may note also the fact that r and sh were interchangeable letters in ancient Persia, according to Dr. West, 10 who says that in dealing with Avesta names "we have to recollect that art and ash (r and sh) are merely dialectical variants of the same sound, as ancient arta = Avesta asha, Avesta peretotam = peshotam, and Palilavi arda-rahishta = Ashavahisht." Following these examples the title of Shao might have been dialectically pronounced Rao by the Kushans. The earliest Kushan coins of Miaus and Kozola Kadaphes spell the name as Korsan with the common rho. I suspect that the adoption of a modified form of the Greek rho as b, sh, may have been purposely intended to show its intimate connection with the original P or r. The Indian pronunciation of the title, as declared by the Indian inscriptions of Kanishka and Vasu Deva. was certainly shahi; and the same pronunciation was perpetuated by the later coins.

The general adoption of some portion of the Mazdean cult was certainly due to Kanishka, as his predecessor, Wema Kadphises, was a steady worshipper of the Indian Siva, whose trident, with battle-axe attached, is seen on all his coins, along with the figure of the moon-crested

Babylonian and Oriental Record, vol. i. 155.
 Babylonian and Oriental Record, vol. ii. 237.

god himself, and his bull Nandi. On the copper coins this king is represented with his right hand pointing downwards near an altar, which is usually described as a fire altar. This type of the king sacrificing was adopted by all his successors.

I possess a curious copper coin (Pl. XV. fig. 14) which must almost certainly belong either to Wema Kadphises or to his successor Kanishka. On the obverse is the king sacrificing, but turned to the right. On the reverse is a double-faced bust, the right face being beardless and the left face bearded. Before the former is the well-known three-pronged symbol of the Nameless King, and before the latter is the symbol used by Wema Kadphises and There are traces of legends on both sides, Kanishka. but nothing is legible. In my account of the coins of the Nameless King I have noted that both he and Wema Kadphises have the same peculiarity of using the nominative case, while the forms of some of the Gundharian letters, which are common to both, are not used on other coins. These facts are, perhaps, sufficient to show that the two princes were contemporaries. But this new coin seems to offer a closer connection between them, if, as I suppose, the double-faced bust gives us the heads of the two kings united together. Perhaps it was due to a league between them that the Saka chiefs were driven out of Northern India in the first century A.D.

The names of the deities represented on the coins of Kanishka are certainly not Scythian. The goddess NANA was of Babylonian origin, but her worship had been adopted by Artaxerxes Mnemon, who set up her statues in several of the principal eities of the Persian empire. On the coins which bear Greek inscriptions she

is called NANAIA. Her figure may, perhaps, be a copy of some Persian statue; but its pose and action agree so closely with those of the other deities that I feel satisfied the whole were the offspring of the same period during the reign of Kanishka. The designs I would attribute to the school of Indo-Greek art, which about the same time produced so many fine specimens of architecture as well as sculpture.

The finest coins are those which bear the Greek title of BACINEVC BACINEWN with the figures of HAIOC, CANHNH, HOAICTOC, and NANAIA. These figures were afterwards copied exactly on the coins which bear the native title of PAONANO PAO, with the corresponding native names of MIIPO, MAO, AOPO, and NANA. The remaining names are partly Persian and partly Indian with the single exception of HPAKIAO, or Herakles, with whom the Indo-Scythians identified the Indian god OKPO. This figure of Herakles is undoubtedly Greek; and the standing figures of OKPO with a club are direct copies of it. But the other figures of OKPO, with the trident and the bull Nandi, are certainly of Indian origin. Some have three heads and four arms. That the Indians possessed statues long before the time of the Indo-Scythians we know from the sculptured remains of Asoka's period at Bodh Gava and Sanchi. But we have also the direct testimony of Q. Curtius, who says that a figure of Hercules (Herculis Simulacrum) was carried in front of the army of Porus.11

On a single gold coin of Kanishka we have a represen-

<sup>&</sup>lt;sup>11</sup> Q. Curtius, viii. 14—11. Herculis simulacrum agmini peditum præferebatur.

tation of Buddha, under the name of BOAAO. figure is standing with the right hand raised in the act of blessing. He is also represented in the same attitude on some rare copper coins with the title of CAKA MANO BOYΔO, or Sakya-Muni Buddha.13 On a few copper coins Buddha is represented sitting in native fashion on the ground, with his right hand raised in the act of teaching.13 I have referred to these coin figures because they are the earliest representations of Buddha that have yet been found. The sculptures at Bodh Gayâ (B.c. 250) and at Bharhut (B.c. 150) are remarkable for the absence of any figure of Buddha. His empty throne, his hair (chudâ-mani), his bowl, and his foot-prints, are frequently shown; but I have not seen any Indian sculptured figure of Buddha himself prior to the time of Kanishka. The earliest figures are those found in Gandhâra to the west of the Indus. This is the more remarkable as the Indian representations of Lakshmi at Bodh Gayâ and Bharhut are found very exactly copied on the coins of the Indo-Scythian Azilises. Even at Sanchi, so late as the middle of the first century A.D., there are no figures of Buddha. I think, therefore, that the well-known designs of Buddha, both sitting and standing, which were spread all over India from Mathura to Ceylon, must be ascribed to the Indo-Greek sculptors of the Indo-Scythian king Kanishka, about A.D. 100. may add also that the designer, whoever he was, has clad

<sup>&</sup>lt;sup>12</sup> See Brit. Mus. Cat., Pl. XXVI. 8, and XXVII. 2; also Ariana Antiqua, Pl. XIII. 1, 2, 3. This reading is Mr. Rapson's.

is See my coin in Bengal Asiatic Society Journal, for 1845, and Von Sallet, Pl. VI. 1.

the figures appropriately in Indian garments, in the sanghati, or kilt, fastened round the waist, and the nttara sanghati, or robe, which sometimes enveloped the whole figure, and at other times was so arranged as to leave the right shoulder bare. As the artist had daily opportunities of seeing Buddhist monks, he may be credited with clothing the Teacher in his native costume, instead of in the foreign garments of Greece, the khiton and himation, as described in Brit. Mus. Cat. p. 133.

Kujula Kadphises, the founder of the Kushan kingdom. would appear to have been content with the simple religion of his ancestors, who worshipped the god of Death, a deity carrying a club, whom the Greeks identified with Herakles, and the Indians with Yama or Sira. cessor, Wema Kadphises, or Yen-Kao-Ching, the conqueror of India, continued the same worship, and adopted the Indian figure of the god Siva and his bull Nandi on all But a complete change took place after the accession of Kanishka, whose wide domains probably extended from the Caspian on the west to the junction of the Ganges and Jumna on the east. In Court's Manikyâla inscription he is expressly named as the "aggrandizer of the Kushan race," Gushana-vansa Samvardhaka. His territories embraced large portions of both Persia and India. with the natural consequence that the barbarian conqueror adopted much of the religions of the two conquered races. This result is clearly displayed on the numerous coins of Kanishka and his successor Huvishka, which are described in the following pages. Altogether, their coins give the names of no less than 33 deities, of which several are unmistakably Greek, while the rest are partly Persian, and partly Indian. Several of the names are, of €./

course, only different appellations of a single deity with different functions. Thus the regent of the planet Mars, who represented the element of Fire, was also the god of Battle, with whom was associated the goddess of Victory. These three figures are all described in the group of the planet Mars.

As before stated, I have divided all the names into seven classes, according to my view of their affinities with the seven planets, and in the order of the seven weekdays. The coius bearing the name and figure of Buddha form an eighth class. In the following lists the names are arranged in their respective groups. The letters K and H stand for Kanishka and Huvishka, the kings on whose coins the different deities are found. With the single exception of one piece of Nanaia, the gold coins of Vasu Deva present only the single type of Sira. His copper coins give all the seven deities in very rude style.

Since writing the above I have received a gold coin of Huvishka, with the reverse of APOOAC TO, which has led me to reconsider the probable meaning of the name. I now think that it may be rendered by Arcra-Aspa, taking arcra as "air" in gentle motion, as represented by the walking horse. The word arcra in fact seems to be identical with the Greek arpa and the Latin aura. The name of APOOACTO must therefore be assigned to No. IV. group of Mercury, following OAOO. The quick running figure of OAOO represents the "Wind," or air in quick motion, i.e. are pos, or ventus, as distinct from the atmosphere which we breathe. The name may also be read as Arha-aspo—and as Arha and Arcra are both names of Indra, the full name would mean "Indra's

steed," that is the "Wind" which brings the rain. Another similar name of the Wind is Prishadaswa, or Prexaspes, or the "Rain Steed."

The discussion on the meanings of the different names will follow with the next paper on the coins of Huvishka.

of Fortune. As both presided over metals, they are represented in armour.

## DESCRIPTION OF THE PLATES.

<b>Z</b>	XIV. 1	XIV. 9
N.B. Unless otherwise noted, all the obverse legends are in Greek letters, and all the reverse legends of the coins of Kujula Kadphises and Wema Kadphises are in native characters. These native characters I have hitherto called Arian. Lassen called them Kubulian, and Wilson named them Arianian. I now propose to style them Gandharian, because they were used throughout Gandharia, to the east as well as the west of the Indus, from Kandahar to the Jumna. The name of Bactrian, or Indo-Bactrian, is certainly wrong, as no coins have yet been found to the north of the Indian Caucasus with any native characters, save those known as Chaldeo-Pahlavi.  The coins of each king are numbered continuously on the left. The references to the Plates are given on the right.	HERMEUS AND KUJULA KADPHISES.  78 & 90   Head of King to r. Plate.		XV. 10	XV. 11
Thanarajasa rajadirajasa Sarraloga-iswarasa Mahiswarasa Hima- Kathpisasa tradata.	N.B. The weight of this coin shows that it was intended for the equivalent of the Roman silver denarius, just as the gold coins of the Kushan kings had been assimilated to the Roman denarius aureus. But the name of the gold coin was also adopted as Dinar, which is found in all the inscriptions of the Guptas. In fact, I look upon these Indo-Scythian Dinars as a simple reissue of the Roman Denarii Aurei after recoinment. The two coins would, therefore, have been current at the same time, the recoined Dinars in N. India, and the Roman Aurei	throughout S. India.  [2 coins, Author.]  King standing to 1., as on the silver coin. Trident and club. Kadphises symbol, and Greek legend as on No. 1.  Siva standing before Bull, trident in r. hand, loopard's skin over I. arm and water-pot in hand. Buddhist symbol over Bull, trident in hand.

Same as No. 11, but middle size.	Same as No. 11, but small size. [Brit. Mus. Cat., xxv. 14.]	Bust with two faces, surmounted by an Indo-Scythian helmet.  Left face, hearded, with Kadphises symbol in front.  Right face, smooth, with symbol of Nameless King in front.  King standing to r., sacrificing at small altar, like Wema Kadphises.  This coin is unfortunately in very had preservation. There are traces of legends on both sides, hut I cannot recognise any single letter with certainty. On the king's side the traces look like Greek.  In addition to the two symbols of Wema Kadphises and the Nameless King, I notice the following peculiarities, which are common to the coins of these two Princes.  1. Both use the same titles of BACIAEYC BACIAEWN CMTHP METAC in the nominative case  2. Both use of a circular margin composed of reels and pellets, in the place of the native legend.  The Nameless King holds a club upright before his face.  The Nameless King holds a scub upright before his face.  The Dath use the same peculiar form of the Gandharian letter j, thus: X.

of breast. Greek legend incomplete. Reading on left, CAK; and on right, N BOYA.	HUVISHKA (?).  Oblong thick coin, taken from a shetch made in 1842. Coin lost.  Obv.—King riding on an elephant. Legend in very corrupt Greck letters, quite unreadable.  Reck letters, quite unreadable.  Reck letters, quite unreadable.  Legend in large Gaudharian characters:  Legend in large Gaudharian characters:  Jayacasa.  In 1842 I read the name av Hystaspes, tentatively. But, with a very slight correction, it reads quite clearly, Huvishka.  As the elephant-rider on the obverse is the commonest type of Huvishka's copper coins, this reading of the name seems very probable. The use of the Gandharian letters in this legend is quite unique.

LONDON:

1892.

# COINS OF THE KUSHÂNS, OR GREAT YUE-TI.

(See PLATES IX.—XIV.)

#### HUVISHKA.

THE gold coins of Huvishka offer four different busts of the king, which, to save needless repetition, I will now describe. All four representations are given in Plate XIX., marked A, B, C, D, by which letters they will be quoted.

Plate. A-is a very rare large head of the King, covered XIX. A. with a round jewelled helmet with spreading crest, and the ends of the diadem hanging down behind. A large ornamental earring is in the ear, and flames spring from the shoulders. The legend, in badly-formed Greek letters-PAONANO PAO OOHPKI KOPANO. Shaonano Shao Hoveshka Koshano. "The King of Kings HUVISHKA, the Kushan." XIX. B. B.—Half-length figure of the King to left, with pointed helmet, thickly jewelled, holding sceptre in left hand, and club in right hand before face. On some coins the sceptre is changed for the ankus, or "elephant-goad," which refers to the King as an elephant rider, as seen on his copper coins. XIX. C. C .- Half-length figure of the King, with round jewelled helmet, to left, club and ankus in D.—The same half-length figure of King to the XIX. D. right. On some of the coins the King's name is OPOHÞKI, Huveshki.

All these three names belong to Karttikeya, the Indian god of War. The last name, Visiakha, the "Divider," is given to him as Shan-mukhi, or the "Six-faced," because he divides the year into two portions of six months each.	King riding Elephan to r., with sceptre and ankus.  Five-god, AODO = Athsho, as on copper coins of Kanishka.  Havishka sumhol	King riding Elephant. Figure of Fire-god, Athsho, with hammer and tongs; with mistaken legend of MAO, the "Moon."  N.B. I attribute this blundered inscription to the ignorance of the die-sinker, and not to accident, as I have met with several specimens of APAOXPO with the cornucopiæ duly labelled MAO. The blundered legends of the obverses also point to the same conclusion of the die-sinker's ignorance of Greek.	Rude figure of King ridi' g Elephant. Jumbled Greek legend, as made out by Prinsep from four specimens: OIAHAHOHOHOHIAHIAHPOAIAH. Figure of Fire-god, as usual, with I. hand on hip, and r. hand extended. Huvishka symbol to I.; to right, OAH. The obverse legend does not seem to retain any trace of

XXII. 22		XXIII. 1
King, nimbate and diademed, riding Elephant, to r. Legend	King Hurshka kneeling before the goddess Nana, as on No. 66. Legends the same, as far as readable.  N.B. By a strange fatality both of these important and interesting coins have been lost. Of No. 66, Lady Sale's coin, nothing now remains but a slight tracing of my original drawing. But of No. 85 I still pussess a leaden impression, which was recovered uninjured after six months' submersion in the wreck of the steamer Indus.  The attribution of both coins to Huvishka is rendered quite certain by the types of the King riding and sitting cross-legged, as well as by the peculiar symbol, which is found only upon the coins of this Prince.  There are copper coins, with the reverse of NANA, of all three types, E, F, G, of obverse, but they are rare, and generally in poor condition. Specimens may be seen in Ar. Ant. xiii. 7, and in Author's collection.	Saturn. Oksho. Siva, or Yama.  [Brit. Mus., from Author.]  Half-length, figure of King to left, as C. Legend as usual. ### Notes on the Names of the Deities.

I have reserved my explanations of the names of the Kushan deities to the last. I am particularly anxious that they may be accepted simply as attempts, more or less plausible, to ascertain the nature and functions of the numerous gods and goddesses whose names are found upon the coins of the two great Kushan kings, Kanishka and Huvishka.

The founder of the dynasty, Kujula Kadphizes, presents only the figure of the Scythian god of Death, who was identified with the Greek Herakles with his club. But as Kujula calls himself Sacha-dharma-thida, or the "upholder of the true Dharma," it would seem that he had studied, and perhaps partially adopted, Buddhism.

His son, Hima Kadphises, presents only the figure of the Indian Siva or Yama with his "noose," who, as I conclude, was identified with Gebeleizes or Sapaleizes, the Scythian Herakles, or god of Death.

With his successors, Kanishka and Huvishka, we get an extensive Pantheon of Persian and Indian deities, which includes the sun and moon, and the five planets, besides the elements and numerous attributes. Thus the planet Mars is the element of fire, and also the god of War, with his attribute the goddess of Victory. So also the Earth, with her mines of metals, became the mother of the god of Wealth and of the goddess of Fortune. Likewise the deity of the lower world became the Regent of Water, and the god as well as the judge of the dead.

Some of my identifications seem to offer some hithertounsuspected affinities with the Western Mythologies. Thus Vaisravana, or Wessawana, the father of Kuvera, may be Iasión, the father of Ploutos. Kuvera, the god of Wealth, was also called Paulastya, after his grandfather. Verethraghna, the god of War, may be Jupiter Feretrius. I suspect also that the name of the Indian Maruts, the twin brothers, is preserved in Birutis in the Troad, and in Bruttium in S. Italy, as both present the Dioskuri on their coins. Birut is only a slightly different form of Marut.

## I.—The Sun. O

- 1. Helios.—2. Miibo.—8. Asha-viehsho.—4. Aino.
  5. Ombor?
- 1. Helios. This Greek name of the Sun is found only on the coins of Kanishka, both in gold and copper, which give the king's titles in the Greek form of BACIAEYC BACIAEWN. The figure, with a rayed halo round the head, faces the left, with the right hand extended as if pointing to some object, and the left hand resting on the hip.
- 2. MIIRO. This figure is an exact copy of Helios. On the coins of Huvishka the name is often spelt MIORO, and on a single specimen I. find MIURO; but I have not seen any coin with Mithra. On these coins the titles are given in the native form of Shaonan-shao, with the tribal name of Koshano added. On a few specimens of Huvishka the figure holds out a wreath, and on one coin a pair of callipers, which I take to represent the Sun as a "measurer of time" by years. The same type occurs with the moongod Mao, who was also a "measurer of time" by months.

The Greeks generally used the form of Mithra, as in the names of Mithridates, Mithro-barzanes, Mithraustes, Mithraustes, Mithraustes, Mithraustes, Mithraustes, Aspa-mithres, and Mithrakenes. But the true Persian form of Mihr is also found in Meranes and Merdasas, and better still in Meherdates.

- 3. ASHA-VIKHSHO is the usual figure of Miiro with the rayed halo. The name has been compared by Dr. Stein with that of the Mazdean Amshaspand, Asha-vahishta, which means literally "best goodness," and is supposed to refer to the brilliant light of the sun, as he is invoked to keep up the "splendour of light." I look upon him as simply an impersonation of "Sunlight." Preferentially I read the fourth letter of the name as a digamma, thus making Asha-vikhsho, which I would refer to as tiksha = "sight" or "seeing."
- 4. AINO. The reading of this name is not certain, as the first letter is corrupt. But as it is so read by all, the name may perhaps be referred to Ahan, the "Day," as the sun is popularly known as the "Day-lord," Aharpati, and as Dirākara, the "Day-maker."
- 5. OMBOR (?) In this name the second letter is corrupt. The coin is very rare, as I have seen only one specimen of the type, of which I possess a cast.

## II .- THE MOON. (

#### 1. SALENE, -2. MAO. -8. MANAO-BAGO.

- 1. Salene. The figure of Salene is exactly repeated in the representation of Mao; but the former coin gives the titles of the king in Greek, as BACINEYC BACINEWN, while the latter gives them in the native language as Shaonano Shao. The figure is represented exactly in the same attitude as that of the sun-god, but instead of a rayed halo, it has a lunar crescent behind the shoulders.
- 2. Mao. In ancient Persia, as well as in India, the "Moon" was a male deity. Mao is the Zend form of the

ancient Persian mah. In addition to a sword the moongod nearly always carries a sceptre.

Another figure of the moon-god, with the same name of *Mao*, seems to be simply a repetition of the sun-god as a "measurer of time," with a pair of callipers in the extended right hand. The moon has been the recognised measure for months from time immemorial, and hence the word *mâh* signifies both moon and month in Persian. In Sanskrit the term is *mâs* for both. The Roman poet Catullus also calls Diana, "Goddess measuring the months" (xxxiv. in Dianam)—

"Tu, cursu, Dea, menstruo Metiens iter annuum."

3. Manao-bago is a third representation of the moongod, who is here undoubtedly the "god of measure," as declared by his name, mana being "measure," and baga being "God," in ancient Persia. The figure, which is four-armed, is represented sitting on a throne with a lunar crescent behind his shoulders. One hand holds out a pair of callipers, a second grasps a sceptre, a third rests on the hip, while a fourth hand holds an indistinct object in the shape of a circle, surrounded by twelve dots which, by their number, may be supposed to typify the twelve months of the year, as well as the twelve signs of the zodiac. As the Indian moon-god, Soma, is usually represented with four arms, and a lunar crescent behind the shoulders, I infer that the figure of Manao-bago must be of Indian origin.

The copper coins offer only the common standing figure with the lunar crescent behind the shoulders, and a sceptre in the left hand. The right hand is simply extended to the front.

There are several varieties of the standing figure of Mao on the gold coins. On some he carries a sword only, on some a sceptre only, whilst on others he carries both sceptre and sword. On a fourth variety the right hand holds out a wreath.

The personal names connected with the moon are not very numerous. From the shorter form Mao (Persian Mah) were formed Madates and Masistes, besides Ha-Ma-datha, the father of Haman. From the longer name of Manao were probably formed Monobatus and Moneses.

### III.-MARS. O

- 1. Hephaistos.—2. Athsno.—3. Loe.—4. Maaseno.
- 5. Skando-Komaro.-6. Bizago.-7. Orlagno.-8. Oaninda.

Mars is represented under a greater variety of names than any other of the planetary deities.

- 1. Hephaistos. As the god of "Fire" his figure was probably borrowed from a Greek source. He is represented with a hammer and a pair of tongs, with flames springing from his shoulders. The same figure is repeated with the name of AOPO, or Athsho, for the old Iranian Ader or Azer—"Fire"—or in modern Persian âtash. A few coins give AOOPO, or Athasha, which is clearly intended for Atush.
- 2. Athsho, or Athro, is a bearded figure, holding out a wreath in the right hand, and resting the left hand on the hip or on the hilt of his sword, in the same pose as the figures of Miiro and Mao. I take this figure to represent the Element of Fire (Brit. Mus. Cat. xxvi. 4). There are many personal names formed with the old Iranian Atur or Ader = Fire—as Atradates, Atropates, Atrines, Artabasus, Artabanus, Artaphernes, Artabandes, Artagerses, Artabaris.

Artembares, Artazostra, &c. But I cannot find a single name formed with the modern Persian Atash.

3. Loë. A similar figure on a copper coin is labelled AOH. Only four coins with this legend have yet been discovered. From the obverse type of the king riding an elephant the coin might be assigned to Huvishka; but the corrupt Greek legend is quite unintelligible. sess one of the four specimens; the coins were originally published by Prinsep (see E. Thomas's Prinsep, vol. i., Pl. XXII., Fig. 12). The short legend was the same on all. I think the word must certainly refer to fire or heat. In India the extreme heat of the summer air is called luh: and in England we have glow and glow-worm, as well as luke-warm; besides lew and lowe in lowe-bell, a bell with a light placed inside, which was used for fishing at night. I suspect that the word may be connected with the Scythian Roi or Rhoi, which appears in the name of Rhoisakes, the "friend of Rhoi." Rheo-mithres would have the same meaning; but of Rhoi-metalkes and Rhoi-skuporis, I cannot even guess the meaning. I find Rhosakis mentioned as a noble Persian under Ochus, who was descended from one of the seven conspirators. There was also a Persian Rhoisakus at the battle of the Granicus. word Loë must also be connected with the old Greek Aurn and the Sanskrit Luk, both signifying "light," and also with the Latin lux and luces. Lohita and Rohita are also used to denote the red colour of fire. Hence Agra, or "fire," is called Rohitaswa and Lohitaswa, or the "red steed" of Mars. The name was common in Persia as Rhodaspes. Iron, the metal now dedicated to Mars, is called Loha; but as iron is not red, I conclude that bronze was the original metal which was considered emblematic of fire, its green and red tints resembling those of the

planet. Ayas also is another name for iron, but as may be inferred from the Latin as, it must have been originally given to bronze. The full name of iron would appear to have been Kūlūyas, or "black bronze," to distinguish it from the well-known ayas or as.

- 4. MAASENO.
- 5. SKANDO-KUMARO.
- 6. BIZAGO.

All these three names are genuine titles of the Indian god of War, who is also known as Kürtikeya.

Mahâsena simply means a "general," or "commander of an army."

Skanda-Kumâra is the "Prince Skanda." Skanda is also used alone.

Visákha is the name of one of the two nymphs, or personified asterisms, by whom the infant Skanda-Kumâra was suckled.

In all these representations the god of War carries a sword and a spear. From the latter weapon he derives his Indian names of Sakti-dhara and Sakti-pāni, or "spearholder," and "spear in hand," just as the Roman Mars was called Quirinus from carrying a quiris, or "spear." All of the three figures are standing to the front, as if on show. The Quirinal hill must have been named after the god Quirinus who carried the quiris, and not the god after the hill, as usually stated.

7. ORLAGNO, or ORTHAGNES. This name has been compared by Benfey with Verethragna, the Zoroastrian Wargod. The Indian form of the name is Vritrahan, an abbreviation of Vritraghan, which was a personification of Indra as the "cloud-striker," or "foe-killer." The form of ghan is preserved in Amitra-ghâta, the Greek Amitro-chades, and it is still used in the well-known name of the

Kachuáha Rajputs as Kachhapa-gháta, or "tortoise-killers." When Indra gave place to Ormazd, the warrior Vritra-ghan was made into a War-god, as Verethragna, which has been gradually contracted to Varahrán and Bahrám. It is possible that the name is preserved in the Roman Jupiter Feretrius.

The name of Orlagno on the Kushan coins I would correct to Ordagno, on authority of the Saka names of Orthagnes and Orthanes, as well as on that of its well-ascertained identification with Verethraghna.

On the gold coins of Kanishka the god is represented armed with sword and spear, and wearing a helmet crowned by a bird with expanded wings, which Dr. Stein has identified with the bird Vâraghna. In the Bahrâm-Yasht the god Verethraghna is represented as "flying with great flapping wings, the swiftest of the flying." The flapping wings of the bird are seen on the helmet of Ordagno on the coins.

As noticed above, I think it probable that the god of Victory, Verethraghna, may be identified with the Roman Jupiter Feretrius, in whose temple all spolia opima were dedicated. This dedication alone would seem to indicate that Feretrius was a "War-god." If this identification be correct, then the Roman name must be earlier than the separation of the Eastern and Western Aryas, and the consequent degradation of Indra. Could the Sabine word quiris, "a spear," have any connexion with the common Indian word chārri, a "stick or lance"? The Sabine words hirpus, a "wolf," and teba, a "hill," would seem to countenance an Eastern connexion.

8. Oaninda, or Vaninda, is a winged female figure

<sup>&</sup>lt;sup>1</sup> Spiegel, 103.

carrying a trophy-stand in her left hand, and holding out a wreath in her right hand. As the figure of Vaninda is a very close copy of the Greek Nikê, Dr. Stein has identified her with the female genius Vananiti uparatât, or "victorious superiority," who is always joined with Verethraghna in the invocations of the Avesta. According to Haug, p. 217, the Vanant Yasht is "a very short prayer addressed to the star Vanant, by which the Dasturs understand the Milky Way."

# IV.—MERCURY. \$

## 1. OADO OF VADO .- 2. ARVOASPO.

Oado, or Vado. The old Persian name for the "wind" was bâd, Sanskrit vât, or as rendered on the coins in Greek OADO = Vado. The element is appropriately represented as a running figure with distended robes. The term bâd is often used in the composition of Persian names, as Badizes and Badres; and, perhaps, also in Vasakes and Vagises, with the shorter form of Wâh, the "wind."

By the ancient Persians the planet Mercury was called Tigra or Tir. the "arrow," on account of the rapidity of its motion. The river Tigris was so called for the same reason. Tigranes preserves the full name of the planet, and so also does Tigra-mitra, which is found in the Wardak Inscription. The shorter form of Tir is found in Tiridates and Tiribasus; the former meaning "given by Mercury," and the latter the "worshipper of Mercury." It occurs also in Teri-teukhmes, or Tiri-takhma, "strong as Mercury."

One of the commonest old names for the planet, both in India and in Persia, was Vayu, and this, I believe, is found in 'Οιόβαζος, or Vayu-Bazu, the worshipper of Vayu, a Persian mentioned by Herodotus, ix. 115, as

having been sacrificed by the Apsinthians to their god Pleistôrus.

2. Arconspo, or Arhonspo. This name is found only on a single specimen of Huvishka, although it is not uncommon on the coins of Kanishka. In both cases it is corruptly spelt as ΔΡΟΟΑCΠΟ, as the initial should clearly be A, making ΑΡΟΟΑCΠΟ. I have already noticed a similar misspelling in ΟΡΛΑΓΝΟ, for ΟΡΔΑΓΝΟ, the ΟΡΘΑΓΝΗC of the Saka series of kings. Dr. Stein is willing to accept the name as it stands for Loharûsp; but I prefer to consider it as a simple mistake.

The type shows a bearded male figure standing beside a bridled horse, with two legs on the same side raised as if ambling. There are only two bearded figures in the whole series of these Kushan coins, namely, ASPO, Athsho, the God of Fire, and OAAO, Vado or Bad, the God of Air or Wind. Both Arva and Arha are Sanskrit names of Indra, and joined to Aspa would mean "Indra's steed," that is the wind which brings the rain. A different form of the name, known in Persia, was Prevaspes, or Prishadaswa, the "Rain Steed"; but the commonest descriptive name for the wind was Gandha-vaha, or the "Scent-waster," which is found on the coins in the form of Ganda-phara, or Gundophares, or Undophares. The symbol of Mercury, \$\frac{9}{2}\$, is placed on many of the coins of this king.

The general of Khusru II, who made his master a prisoner, is named Gurdanaspes by the Emperor Heraclius, and Gundabunas by Theophanes. The first name may perhaps be corrected to Gundanaspes = Gandhanaswa, the "Scent Steed," and the latter to Gundabares, the "Scentbearer."

#### V.-JUPITER. 2

#### 1. MAZDOHANO, -- 2. PHARRO.

In ancient India, as well as in ancient Persia. Heaven and Earth were the acknowledged parents of all creation. The Rain showers of the sky fertilised the earth, hence Heaven was called Parjanya, or the "Rain-god," or simply Parjan, the "Impregnator." Strabo (vv. 1-69) specially mentions that the Indians worshipped Zeus Ombrios, that is, Indra, the Rain-giver. Similarly, in Persia, Ormazd himself was the creator, who, as Bârân, the giver of Rain, fertilised the earth. But as the old Iranians had dethroned Indra, and adopted Ahuramazda or Ormazd as the author of creation, we ought to find the name of Ormazd himself on the Zoroastrian coinage, and that of Parjanya on the Indian coinage of the Indo-Scythians. We do in fact find the names of MAZΔOOANO and of ♦APPO on the coins of Kanishka, and of ♦APPO on the coins of Huvishka.

1. Mazdohano. I take this name to be the same as the Avesta Mazdaonho, the plural of Mazdao. Ormazd himself is simply the Ahura, who is called Mazdao, the author of the Mazdean religion. The two primeval principles of good and evil were united in Ahuramazda himself, the beneficent spirit being called Spenta-Mainyus, and the hurtful spirit Angro-Mainyus.<sup>3</sup> In the Yasna (West, 189) these two spirits are called the "two creators," but they were not separate beings (p. 304), but spirits "inherent in his own nature." Hence I infer that the two-

<sup>&</sup>lt;sup>2</sup> His nineteenth name was the "Creator."—Darmesteter, ii. 25.

<sup>&</sup>lt;sup>3</sup> West's Hang, p. 301.

headed horse, which is ridden by Mazdaonho, may be intended to typify the two spirits of good and evil, which were inherent in the one supreme creator, Ormazd.<sup>4</sup> As the lord of all, the Armenians called the planet Jupiter by his name. He is also said to be the father of the Amesha-Spentas, and of the powerful goddess Ashi-Vanguhi, whose mother was Spenta-Armaiti, or the "Earth."

The name of the great Ahura is found in Orobazus, Orophernes, Orodes, and Hurodes. The name of Ormazd is found in Ormisdates, Oromasdes, and Hormisdas. Baga, or "the god," is also used for Ormazd, as in Bagophanes, Bagopates, Bagasakes, &c.

2. Pharro. Throughout the ancient world there appears to have been a general belief that the great god of the firmament of Heaven was the author of all being, and that the Earth was the mother. In India we have this belief very clearly announced in the Vedas, with reference to Parjanya. Three hymns are addressed to him. In Rig Veda, vii. 101—6, it is said, "He (Parjanya) rules as god over the whole world, he is the life of all that moves and rests." Again in Rig Veda, v. 83, it is said, "Praise Parjanya, worship him with veneration, for he, the roaring Bull, scattering drops, gives seed fruit to plants." In the Atharva Veda, xii. 1—12, its full belief is announced, "The Earth is the mother, and I am the son of the Earth; Parjanya is the Father."

From Herodotus, iv. 59, we learn that the Scythians made the *Earth* the wife of *Zens*. So also at the present day the Russian Slavs worship *Parûn*, the great god, the husband of mother Earth.

<sup>&#</sup>x27;Dr. West suggests Mardareno = "Mazda-uniting," i.e.—the two powers,

<sup>-</sup> Max Muller, 180, 183, 185.

In Greece the feeling was universal. In Athens newly married couples sacrificed to "Heaven and Earth," whose junction was called  $\gamma \dot{a}\mu os$ , or "wedding." In the Eleusinian mysteries the Heaven and Earth were called by mystic names, he as " $\Upsilon \eta s$ , or the "Rain-god," and she as Toxvia, or the mother "who brings forth." The same belief is frequently alluded to by the poets, as by Æschylus (quoted by Athenæus, xiii. 73):

"Then, two, the Earth feels lone, and longs for wedlock, And Rain, descending from the amorous air, Impregnates his de iring mate; and she Brings forth delicious food for mortal men—Herds of fat sheep, and corn."

So also Euripides speaks of  $\Gamma$ aia  $\mu\epsilon\gamma i\sigma\tau\eta$ ,  $\kappa$ uì  $\Delta\iota$ òs  $^{\prime}$ A $\iota\theta$  $^{\prime}\eta$  $^{\prime}\rho$ ,

"O heavenly Aether, mighty Earth,
He, that to gods and men gave birth,
She, teeming mother, on whose breast
Heaven's fertile rain-showers fall,
From whence all living things spring forth,
Both flower and fruit, both man and beast,
Thee do mankind justly call
Mother of all."

The same feeling about Father Hearen and Mother Earth was also common to the Roman poets, as in Lucretius, de Rerum Nat. i. 151:

"Postremo peremit imbres ubi cos Pater Acther In gremium Matris Terrai pracipitavit."

# And also in Virgil, Georgic, ii. 325:

- "Tum pater omnipotens fæcundis imbribus Aether Conjugis in gremium lætæ descendit, et omnes Magnus alit."
- "In fruitful showers Almighty Father Heaven Falls on the bosom of his happy spouse."

Having shown the wide extent of this belief in the ancient world, it now remains to prove that the god Pharro of the coins is identical with the "Rain-god" Parjanya of the Aryan peoples. I find no trace of the name in the Zoroastrian books. But though Indra was supplanted by Ahuramazda amongst the Iranians, yet the functions of the god of the firmament still remained, and Ormazd, the creator of the material world, possessed all the powers of Indra. As the bestower of all good things, he was the giver of the Rain that fertilised the Earth. It was by the agency of his son Tishtrya (the bright star Sirius) that he bestowed the Rains. The Tir-yasht is dedicated to the propitiation of Tishtrya, the giver of Rain. At the present day the Heaven is called Bârân, the "fertiliser," from bârish—rain.

Practically the name of Parjanya would have been shortened to Parjan, just as Aranya and Hiranya became Aran and Hiran. In this slightly altered form of Parjan I think that I can recognise the god of Rain in the name of Parshan-datha, the son of Haman, the Pharsannes of the Septuagint, and the Varaz-tad or Pharas-dates of the Armenians. Here we see that the j of Sanskrit becomes sh in Hebrew, s in Persian, and z in Armenian. In Pharas-menes the s is still preserved. But just as cursus became currus, so I infer that Pharsa became Pharra, with the final n of parjan retained as in Pharan-dates, Pharna-bazus, Pharna-zathres, Pherendostas, &c.

There are several myths connected with the union of Heaven and Earth. Thus in India Parjanya, or Parjan, with his rain drops blesses the earth with his seed (Rig Veda, v. 83). In Greece, Zeus in a golden shower visits

<sup>\*</sup> Darmesteter, p. lxi., ii. 97, Tir-yasht.

Danaë (dry earth), who gives birth to Perseus, i.e. as in Persian to barz=σπόρος="seed," who thus becomes the conqueror of Medusa; in Sanskrit, mrityus, or "death."

The god *Pharro* is represented on the coins as a male figure, with sword, or sceptre, or sometimes with both; and always with a winged head-dress. In his right hand he generally holds a flat, shallow vessel, with some sprouts of corn rising upwards. Mr. P. Gardner calls this a vessel of *fire*. In my opinion the vessel contains shoots of growing corn, of which *Pharro*, the Rain-god, is the begetter. On some coins the god holds a small bag, which Mr. Gardner calls a purse. I take it for a bag of seed-corn, as one of my coins shows the small seeds inside the bag. On a single specimen I find the coin with the bag entirely surrounded by branches of foliage, which I take to denote a vegetable creation.

As an illustration of the significance of the vessel with corn-shoots I can quote the fact that at the New Year's Festival still held at Yazd-i-Khast, one of the last strongholds of Zoroustrianism, every house "has a dish of green corn ready for the feast of No-roz. The seeds are sown some weeks before, so that they might grow up green ready for the New Year's Festival." 7

The same shallow dish of springing corn is also represented on some of the coins of the Earth-goddess Ardokh-sho, and notably on some silver coins of the Saka kings Azas and Azilises. On these last the goddess carries the dish in her extended right hand, and a palm-branch resting on her left shoulder. Mr. P. Gardner hesitates to identify this figure, and suggests a city (?). But the date-palm is surely intended for a symbol of abundance.

<sup>7</sup> English Illustrated Magazine, January, 1890, p. 326. "Travels," by Mr. Theodore Bent.

As a last illustration of the connection of *Pharro* with the *Earth-goddess*, I can quote the engraved gem in my own possession on which the figures of Pharro and Ardokhsho are standing together with a child beside them. He has the winged head-dress and the dish of sprouting corn, while she carries the cornucopiæ [Pl. XXI. 15]. Similar representations of the Earth-goddess will be referred to presently. The junction of the two figures on the same seal with the child, and the cornucopiæ and the dish of growing corn, I take to be a clear declaration that the figures represent the Heaven and the Earth as the creators of all things living.

On the Indo-Scythian coins the Creator is known only as *Pharro*; but he was also commonly known as *Baga*, or "the God," which the Greeks frequently changed to *Mega* for euphony. Thus we have Pharnabazus, Bakabazus, and Megabyzas; Pherendostes, Megadostes, and Bagosakes; Pharnapates, Bagupates, and Megabates.

# VI.—Venus Genetrix, Wife of the Lord of Heaven, Q; The Earth = Demeter.

- 1. Ardorsho.—2. Shaoreoro.—3. Ridê.
  4. Nanaia, Nana. {Venus of Pabylon = Ishtar = Persephone. {Nanaia, wife of the Lord of Hades.
- 1. In treating of *Pharro*, the Rain-god of the Firmament whose showers fertilised the earth, I have somewhat anticipated the functions of the Earth-goddess. In the Vedas she is named *Aramati*, and in the Avesta *Armaiti*. But neither of these names is found upon the coins, which give only Ardokhsho, or APΔOXPO. I have described the figure of the Earth as represented on my seal, which gives the figures of *Pharro* and the *Earth* and their child

and their symbols. On another seal in my possession a similar female figure, with a child, is labelled in corrupt Greek **POOFAO**, or Shao Gao, or "Queen Earth" (Pl. XXI. 16). Gao is one of the Avesta names for the Earth. On a second seal which has been published by Mr. King (Pl. IV. fig. 12, Antique Gems), in my Pl. XXI. fig. 17, I find a similar female figure with child, labelled in Chaldeo-Pahlavi characters, Arman-dukhta, or "Queen Arman," that is, the "Earth." Here, then, we have a direct proof that the temale figure on the coins, which is labelled Ardokhsho, is actually an impersonation of the Earth-goddess.

The female figure named Ardokhsho is represented in two positions, either sitting or standing. When standing she usually carries a large cornucopiæ, which she appears to grasp with both hands. On a single specimen she carries the cornucopiæ in her left hand, and holds out a wreath in her right hand. This last type is also that of the coin with the shorter legend of Dokhsho. On a few rare specimens a flat dish filled with fruits, or young shoots of corn, is placed in the field near the feet of the goddess. As a sitting figure she is seated on a high-backed throne, holding a cornucopiæ in her left hand, and a wreath in her extended right hand. This seated figure is almost an exact copy of the goddess Demeter on the copper coins of Azas.

The derivation of the name of Ardokhsho has not yet been ascertained; but as the shorter form of Doksho is found upon a few coins, and as Dakshû is one of the Sanskrit names of the earth, I think that the name may

<sup>&</sup>quot;Both Amos viii. 1, and Jeremiah Alviii. 32, speak of a "basket of summer fruits."

stand for Arta-daksha or Ard daksha, which thus became Ardâksha by the coalescing of the two d's. One of the Queens of Armenia, the wife of Pâp, was named Zarmandukht, and Artadukhta was the Queen of Ardashir I. the Sassanian. That Ardokhsho represents the Goddess of the Earth, the Prithivî of the Indians and the Spenta Armaiti of the ancient Persians is certain. According to Haug p. 150, Armaiti created the material world, but Ormazd was the soul of it. As the mother of all she was the Magna Dea of the Mazdeans, and might thus have been called Arto-dukhta.

It is to this Venus, the bride of Heaven, and the mother of all things living, that Lucretius makes his noble address in the opening of his poem:—

- "Aeneadûm geuitrix, hominum divômque voluptas,
  Alma Venus cœli subter labentia signa
  Quæ mare uavigerum, quæ terras frugiferenteis
  Concelebras; per te quoniam genus omne animantum
  Concipitur, visitque exortum lumiua Solis:
  Te, Dea, te fugiunt ventei, te nubila cœli,
  Adveutumque tuum; tibi suaveis dædala tellus
  Summittit flores; tibi rideut æquora pouti,
  Placatumque nitet diffuso lumine cœlum."
- "O genial Venus, joy of gods aud meu,
  Mother of Rome, who, as the seasous roll,
  Fillest the ship-starred sea and corn-clad earth,
  Through thee all living beings have their birth,
  Spring into life, aud hail the glorious Suu.
  At thy approach the wiuds and clouds disperse,
  The dædal Earth puts forth her sweetest flowers,
  Rough ocean laughs, aud well-pleased Heaveu beams
  Without a speck to dim his smiliug face."

The planet Venus was called Anahid or Nanaia. She is the Venus Urania who was added to the Zoroastrian creed by Artaxerxes Mnemon. The Earth-goddess was the Zir-Banit, or Zir-genetrix, the wife of Bel Merodach,

just as Demeter, the wife of Zeus, was the mother of Persephone.

2. Shahrewar, or ÞAOPHOPO of the coins, whose full Avesta name of Kshathra-vairya, Prof. Darmesteter (I. lx.) translates as "perfect sovereignty," while Haug calls it (p. 306) "possession, wealth." But both agree that he was the "God of Wealth," and the "Lord of Metals." In this capacity he agrees exactly with the Indian Kurera, the King of the Yakshas, and the God of Riches. In modern times Kuvera is represented as deformed, from a perverse derivation of his name from Ku ="bad" and rera = "body." But in early times the Yaksha Kuyera was noted for the comeliness of his person, as we learn from the story of Sakya Sinha's first appearance as an ascetic at Rajagriha, when the people wondered who he could be. "Some took him for Siva, some for Brahma, and some for Vaisrarana" (or Kuvera, whose patronymic was Vaisravana).9 The comeliness of his personal appearance is further vouched for by one of the sculptures of the Bharhut Stûpa (see my Stupa of Bharhut, Pl. XXII. fig. 1, p. 21). His statue is duly labelled Kupiro Yakho.10 In the Vishnu Purana he is called "King of Kings," and the same title is given to him by the poet Kâlidâs in his Meghaduta, slok. 3.

As metals and wealth are dug out of the earth, Kuvera

<sup>•</sup> Hardy, Manual of Buddhism, p. 29. M1. Beal also notes how 500 Rishis, flying through the air, mistook Buddha for Vaisravana, the god of Riches.—Babyl. and Oriental Record, V. 87.

<sup>&</sup>lt;sup>10</sup> The change in the meaning of name of Kuvera I would attribute to the period of Greek ascendancy in N. India, when some attempt may have been made to identify the Indian Kuvera, the worker in metals, with the lame Hophaistos, the Greek god of Metal-Working; hence kn = "earth" was altered to kn = "bad."

was appropriately made the son of Ira-vira, or the "Earth" by Visravana (or Wessawan). He was therefore called Airavira, or the Earth's son, and as he was the grandson of Pulastya, he was also called Paulastya, or in the spoken form Paulast or Paulat. As all these names recall those of the Greek go i Ploutos, who was the son of Iasion by Demeter (the Earth), it seems to me highly probable that the Indian myth of the god of Wealth had been known in Greece as early as the time of Hesiod.

From this account it appears that Shahrewar or Kshatra-rairya, the "genius of metals and the giver of wealth," is identical with the Indian Airavira or Kurera.

3. Ridê, PIAH, is a female figure, armed with helmet, spear, and shield, like the Greek Athene, and the exact counterpart of the male Shahrewar. The similarity of the equipment suggests some connexion between the two figures, and as the male figure is the god of Wealth, I take the female figure to be the Goddess of Fortune, under the Indian name of Liddhi, with. The Zoroastrian representative of Fortune is the goddess Ashi-ranguhi, whom Haug 12 calls the "Spirit of Fortune." This name is now corrupted to Ashi-shang, and the goddess is identified with Lakshmi by the Parsi priests. The connexion between Wealth and Fortune is shown by the Indian names of Srid for Kuvera, and of Sri for Lakshmi.

Having read the Greek name as Ridê, PIAH, my attention was struck by a remark of Prof. Darmesteter <sup>13</sup> that, "ashi is not the feminine adjective of asha, but is ar+ti, and means bhakti, or piety." I saw at once that the Sanskrit Riddhi might become Arddhi or Arti, the

<sup>11</sup> Beit, Mus. Cat., xxviii, 20,

<sup>18</sup> West's Hang, p. 184.

<sup>13</sup> ii. 270, note.

original of Ashi. Now Rildni was the wife of Kuvera, and Ashi-ranguhi only means the "good Ashi," or Arti or iddhi. She was the daughter of Ahura-mazda and Armaiti (the Earth), and the ancient Persians prayed to her for wealth, for victory, and for children. She is described as riding in a chariot, and there is a doubtful allusion to "her shining wheel." At least Spiegel thus translates the passage in the Ashi Yusht (ii. 118), which Prof. Darmesteter refers to her loud sounding chariot (ii. 119). Perhaps the round object which I have described above as a shield may be the wheel of fortune. The symbol had already appeared on one of the coins of King Moas, as a real wheel with radiating spokes, while on the coin of Huvishka the round object seems to be solid like a shield.

As Ride, or Isiddhi, is an undoubted Indian name, it seems to me highly probable that the names of her mother Ardokhsho and her brother Shaorcoro must also be of Indian origin, as I have already suggested, by deriving the former from Sanskrit Dakshā, the "Earth," and the latter from Airarira, the earth's son.

4. Nana, or Nanaia, the Babylonian Venus, was one of the most ancient deities of the East. Her statue had been carried off from Erech by Kudur-Nahundi, king of Elam, 2300 years B.C.<sup>14</sup> In Assyria she was worshipped as Ishtar, in Phænicia as Astarte, and the planet Venus is still called Ashtar by the Meudeans, and Nāni by the Syrians. Her worship was foreign to the original Mazdeism of Zoroaster; but during the reign of Artaxerxes Mnemon, B.C. 404—361, her statues were set up in Babylon, Susa, and Ekbatana, when her worship was also

<sup>4</sup> Geo. Smith, Assyrian Discoveries, p. 223

introduced among the Persians and Bactrians on the east, and to Damascus and Sardis on the west. In Persia her cult was taught in the Abân Yasht, where she is described under the name of Ardri-Sura-Anâhita. She is the Anaitis of the Greeks, and the Nana or Nanaia of Persian history and of the Indo-Scythian coins. As the Persian name for the planet Venus is Zarah, the adoption of the name of Anâhid shows that her worship was a foreign addition to the original cult.

In the Avesta Ardri-Sura-Anahita is "the high, powerful, undefiled spring of water" which flows down from heaven upon the earth. Her statue is described as carried forth in a standing position, and some details of her dress are given. In her hand she carried a baresma or barson... On the coins Nanaia carries a peculiar symbol or sceptre, which may perhaps be intended for her barsom. golden crown is mentioned, but in the coins there is only a lunar crescent. This crescent, however, connects her with the moon, which agrees with the general opinion of antiquity. A bilingual inscription at Athens translates Abd Tanat by Artemidorus, and she is called Tanata in the cuneiform inscription of Artaxerxes. Plutarch says: "Artemis quam vocant Anaitida," 15 and Hesychios says Zupiris was the Persian name of Artemis, i.e. Zarah. In the Aban Yasht it is said that she presided over the birth of children, and that women in labour prayed to her for a happy delivery. Here, then, she appears as Juno Lucina. By the Assyrians she was accounted the daughter of the moon-god. All connexion with the moon appears to be dropped in the Aban Yasht; and yet we have the lunar crescent preserved on all the Indo-

<sup>15</sup> Hyde, 94,

Scythian coins of Nanaia. Perhaps the crescent is meant in the description of her "well-made crown in the shape of a ratha with fillets streaming down." 16 But I should prefer to identify the ratha with her sceptre, which is sometimes represented with pendent fillets.

On some rare coins of Huvishka Nano is connected with Oksho, the two deities standing side by side and facing each other. As Oksho is certainly the god of Death, this connexion would seem to point to the identification of Nano with Persephone, the Queen of Hades. It is perhaps not impossible that the Assyrian myth of the "Descent of Astarte into Hades" may have been the original of the famous Rape of Persephone from the field of Henna.

On other coins Nano is represented as Artemis, holding a bow in the left hand, and with her right hand drawing an arrow from the quiver at her back. One coin of this type has a corrupt legend, which may be read doubtfully as ZEIPO or ZEPO for Zahra, the Persian name of Venus.

On a single coin and on two gems she is represented sitting on a lion. The legend on the coin is simply NANO, but both of the gems have an unread legend, ΦΡΕΙΧΠΑΔΗ, Phreikhoadé, which seems to offer some sort of approximation to the name of Persephone. As Homer calls her ἐπαινή, the "terrible," Persephone might be compared with the fierce goddess Durgâ, who is well known as Sinha-rathi, because she is represented "riding on a lion." As Durgâ was called Kumâri, or the "maiden," so also Persephone was generally known as the κόρη, or virgin goddess. In fact κόρη or κουρη is the same word as the Sanskrit Kumâri, which in its

<sup>&</sup>lt;sup>16</sup> Aban Yasht, 128.

spoken form becomes Kuäri. I would suggest also that the title of Despoina, which was applied to Persephone as "mistress of the lower world," may have been originally Dis-potnia, or "wife of Dis," as poina would appear to be only a contraction of  $\pi o \tau \nu \iota a$ , or Sanskrit patni, a "wife."

On two very curious copper coins the Kushan king Huvishka is represented kneeling before the goddess Nana, who is standing as usual. Behind her is inscribed her name NANA, and round the king's hand is inscribed his title of PAF PAF(AN)—or King of kings. Above is an incomplete legend beginning OMOIAFOFW..... Here there is no doubt of the Indian origin of the title, which is clearly Raja Rajānām, and not the Persian Shāhānu Shāh.

As the brightest star in the heavens the planet Venus was called *bares* or *barsin*, the "brilliant," Sanskrit bhråj, and her name was very common among Persian ladies.

The goddess Nana or Nanaia was closely connected with the god Oksho, as she is represented standing beside him on several gold coins, both large and small. From their positions facing each other they must certainly be husband and wife. In this case Nanaia will represent Persephone as Queen of the Lower World, or Hades. Except on one coin she is always represented standing. and fully clad, with a crescent on her head. In one hand she carries a peculiar short sceptre, which appears to be surmounted with the forepart of a deer. In the other hand she carries a small vessel holding some uncertain objects. The union of the goddess Nana with the god of the lower world is confirmed by Strabo, who saw the statues of Anaïtis and Omanos placed together in the same temple. Omanos is the Greek form of the Avesta Volumano, in Sanskrit Bahu+manas or Su+manas, who was the Indian Yama, or Judge of Hades. His title of

Dharma Raja has the same meaning as the Avesta name. He must also be identified with the Roman Summanus. The name of Omanos is not found on the coins; but as Oksho is represented with a club and noose, we know that Yama is indicated. Summanus is directly identified with Pluto and Dispiter, by Martial and Arnobius.

The usual legend on the gold coins is either NANAIA or NANA or NANO; but it is extended to NANA ÞAO or ÞAO NANA. With this royal title of "Queen Nana" she generally carries a sword in addition to the sceptre.

A new type shows the goddess fully clad, holding a bow in her left hand, and drawing an arrow from a quiver at her back. This representation fully confirms her identification with Artemis. The same figure is found on an unique coin of Azas.

Another type shows the goddess sitting on a lion, with the crescent on her head, and her peculiar sceptre in her hand. This is one of the common representations of the Indian goddess Devi, the wife of Siva, who is therefore called Sinha-váhini, or the "lion-rider." Siva in the form of Yama is the god of the Lower Regions, like Oksho. Homer calls Persephone ἐπαινή, "the terrible," and the Indian Devi is also called Bhaváni, "the terrible."

The Babylonian account of the "Descent of Ishtar into Hades" may be compared with the Greek account of the Rape of Persephone, and her consequent descent into Hades.

The planet was generally known as malkat shawaina, or the "Queen of Heaven." Amongst others we have Barsine, the widow of Memnon and mistress of Alexander, and Stateira, the eldest daughter of Darius, who was also called Barsine, a name derived from berez, "brilliant," a title of the planet Venus. It seems, therefore, not improbable that the Greek Persephone, or Phersephone, may be only the Persian Barsaphanes. I find no personal names connected with Nanaia—perhaps because it was of foreign origin. But Bidukht was another Persian name according to Hyde (p. 90), which was probably in common use, as it is found in the same way as other female names, as Arta-dukhta, Azermidukht, Purandukht, and Armandukht. Perhaps the female names of Parysatis and Pharsicis may be made up from the title of Berez, or Venus, "the bright." Orsabaris, the daughter of Mithridates Eupator, may also be referred to berez.

5. Zeiro, or Zero, is found only on one coin, which is in the British Museum. As the same figure on other coins is named Nano, the corrupt legend is most probably intended for Zahra, the Persian name of Venus, or rather of Artemis, as the goddess is armed with bow and quiver. The wife of Haman was named Zahra, which in the Septuagint is rendered by Sôsara, Σωσάρα. Omitting the initial syllable, this is the same name.

# VII.—SATURN. b

- 1. Herakilo.—2. Oksho.—3. Sarapo.—4. Horôn.— 5. Okhsho.—6. Oaksho.—7. Omanus.—8. Sapal of Sabel.
- 1. HERAKILO, or HERAKLES. On a single gold coin, and on several rare copper coins, there is a naked standing figure, armed with a lion's skin and club, and inscribed HPAKIAO. The figure on the gold coin is clearly a rude copy of some one of the many known statues of Herakles. On the copper coins the attitude and the position of the club are varied.
  - 2. Oksho, OKPO, is a standing figure, evidently sug-

gested by that of Herakles. But the figure has now become an Indian god with three heads and four arms. With one hand he grasps a club, which rests on the ground; the second hand holds a trident; the third a thunderbolt; and the fourth a water-vessel. (Huvishka.)

A second representation of Oksho, also with three heads and four arms, shows him as a naked mendicant with trident, damara or drum, chakra or wheel, and deer. This is the Phallic Siva. (Huvishka.)

A third representation of Oksho, with one head and four arms, shows him carrying trident, drum, and watervessel, and holding a deer. This is the common form on the coins of Kanishka.

A fourth representation of Oksho shows the god with one head and two arms, carrying the trident, and the pasa or noose on coins of Vasu Deva.

A fifth representation of Oksho shows the god with one head and two arms, armed with trident and noose, standing in front of the humped bull Nandi. (Vasu Deva.)

A sixth is similar to the last, but the head of the bull is turned round, boustrophedon. (Vasu Deva.)

A seventh shows the god with three heads and four arms, standing in front of the bull Nandi. Some two-headed figures also have four arms.

3. Sarapo is represented both sitting and standing. The former type occurs only on the small gold coins, but the figure corresponds so closely with that of the Greek Plutôn that there can be no doubt it is intended for the king of the Lower World. He is represented with a modius on his head, as described by Suidas, seated on a throne, with a sceptre in his left hand and a "noose" in his right hand. It is not a wreath, but is the regular Indian piece, or

"noose," from which Yana gets his titles of pási and pâsi-pâna, or "noose-in-hand."

On the larger coins Sarapo is represented as a standing figure with a simple head-dress, and a short sceptre or rod in his left hand. His right hand is extended with fore-finger pointing, as shown in the figures of *Miiro* and *Mao*, but it is empty.

Both Porphyry and Suidas say that Sarapis presided over the "invisible world." 17 Suidas adds that the statue of Sarapis bore on its head a measuring vessel, and in the hand a cubit, or measuring rod for fathoming the depth of the Nile]. 18 Diodorus calls him the Egyptian Pluto. Porphyry couples Serapis with Hekatè. No derivation has yet been found for the name, but it seems not impossible that the name may be identical with III Sarava, one of the titles of the Indian Siva (? Sarvva-pa = Lord of all).) Perhaps Sarapis may represent "Time," and would thus symbolize the annual rise and fall of the Nile, as well as the gradual growth and decay of heat, and its renewal every year. Sarpa, the serpent which renews its skin, is known to the languages of India, Greece, and Rome. would identify Sarapis with the Greek Minos, the Indian Yama or Dharma Raja, and the Zoroastrian Bahman or Volumano, all of whom sat to judge the dead. Volumano in fact is described as "rising from a golden throne to welcome the souls of the dead into Paradise."

4. Hôron, WPOH, and 5, Okhsho, OKÞO, are found only on two very rare coins; the latter, in fact, I believe to be unique. I couple them together because the two figures are exactly alike. Both are bearded; each has a modius

Prichard, Egyptian Mythology, 93. Prichard, 91. Haug, 255.

on his head, each holds a sceptre in his left hand, and each points downward with his right hand. Perhaps both may refer to the god of water, of which the modius, or water vessel, would be a symbol. In this view the name of Hôron might be compared with Varuna, the Indian god of water, while that of Okhsho might be referred to Akshara, or Akhra, a name of Siva, which in the Vedas is also used to designate "water."

These are mere guesses, but of the next I cannot even make a guess.

- 6. Oakhsho or Vakhsho, OAXPO. This figure differs entirely from OXPO as well as from OKPO, so that there is no possibility of the legend being blundered. The figure is that of an old man holding a long sceptre in his right hand, and carrying what looks like a dolphin or fish in his left hand. If I could be sure as to the fish or dolphin, I should be inclined to accept the figure as the god of the "Ocean."
- 7. OMANOS, ΩMANOS, is coupled by Strabo [xv. 3. 15] as being placed with Anaitis in a common shrine. He must therefore be Hades, the lord of the Under World. The name of Omanos has already been identified by Haug (p. 255) with Vohumano or Bahman, who is described as rising from his throne to welcome the souls of the dead. As the name means the "right-minded," in Sanskrit Su-+manas or Sumati, in Greek Eumenes, this form of the god is clearly the same as the Indian Yama, or Judge of the Lower World, and the Roman Summanus, or Pluto.<sup>20</sup> His name is not found on the coins, but as the god is represented with club and noose under the name of Oksho we

<sup>&</sup>lt;sup>20</sup> Summanus is directly identified with Pluto and Dispiter by Martial and Arnobius. The Indian Yama is also named Saman, or the "Killer," from sam, to kill.

know that Dharma Raja is intended, which is one of Yama's titles.

8. Sapal or Sabal. The name of Sapal does not occur on any of the Kushan coins, although it appears on most of the Saka coins. It is found in the name of Sapaleizes, whom I believe to be the same as Zamol-xis or Gebel-eizes, to whose realm the dead were supposed to go (Herod. iv. 94). Zamol and Gebel appear to be only variant forms of Sapal. The word is, no doubt, connected with the Sanskrit Sava, a "corpse," from which Siva received his title of Savara, or "receiver of the dead." It is also connected with the Latin sepelio and sepulcrum, and with the Hebrew Sheol, or Shaul, as Gesenius writes it. country occupied by the Saka Scythians received the general name of Zabulistan, and their capital was called Sigal. But the name was very widely spread over all the countries between the Indus and the Euphrates. Thus we learn from Tacitus (Annal. xii. 18) that when the Parthian king, Gotarzes, arrived at Mount Sambulas he sacrificed to Hercules, the principal god, whose shrine was on the mountain. Pliny also (Nat. Hist. vi. 27) calls the same hill Mount Kambalidus. Omitting the epenthetic Greek m before b, we get Sabula and Kabala as the actual name of the hill, in which I recognise the two forms given by Herodotus of Zumol-xis and Gebel-eizes. On some rare Indo-Scythian coins I find the name of Sapal-eises. I think, therefore, that this god, who was worshipped on the mountain of Sambulos, was actually Hercules himself, whose name is not otherwise mentioned by Herodotus.

In the curious legend of the "Descent of Ishtar into Hades," the god or king of Hades is called *Iskalla*, a name which is clearly identical with *Sakal*, and, therefore, with *Sapal*. As I have already shown that Herakles, as Nergal,

was the god of the dead, it follows that he must be the same god as *Iskalla* or *Sapal*. Hence we see how easy it was for Herakles, the god of Death, to be the victor in all encounters.

The name of Sapal or Sapar is found in every country occupied by people of Scythian race, from the Saparnian Hyrkani on the Caspian, to the Sabellian Hirpini on the Tiber, who worshipped Sancus, the Samnite Hercules. In Ariana we have the names of Sapaleizes, Spalahora, and Spalirises, and the Spartani of Zapaortene. In the West we have Sparamizes and Parmizes, Sparadokus, Spartokus, and Spartacus. In another form we have Skolopitus, king of the Skoloti, and the more contracted forms of Saulius and Sauloë. In both countries the wolf was called hirkus and hurk, and a bull teba and tiba.

## BUDDHA.

The coins with the figure of Buddha are extremely rare. He is represented both standing and sitting, but only on the coins of Kanishka. The gold coin, which is unique, was found in the Stûpa at Ahin-posh, near Jelalahad, and two copper pieces were found in Ventura's Manikyala Stûpa. These three are all of the standing type. I have obtained only three specimens of the sitting type during my long career.

On the gold coin the legend is simply  $BO\Delta\Delta O = Buddha$ .

On the copper coins the legend is longer, and is rather difficult to read, as the latter part is reversed in boustrophedon order. Beginning at the upper left hand I read CAKAMA, continued from the lower right in reverse order, NOBOYAO. For this reading I am indebted to Mr. Rapson.

# On left CAKAMA. On right OAYOBON.

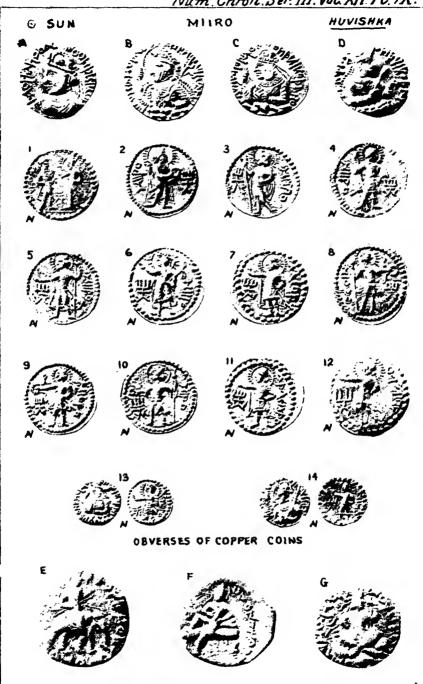

The copper coins are in three sizes, like those of Kanishka's money generally (see Ariana Antiqua, xiii. 1, 2, 3; see also Thomas's Prinsep's Antiquities, Pl. VII. fig. 21, and Journal Bengal Asiatic Society, 1845, Plate II., fig. 7).

In the same Plate, fig. 6, I have given a specimen of the seated Buddha.

These figures are of some interest as they are the earliest known representations of Buddha. They would also seem to have been the original representations, as all the Indian figures follow the same types.
